algebra project baltimore: Quality Education as a Constitutional Right Theresa Perry, Robert P. Moses, Ernesto Cortes, Jr., Lisa Delpit, Joan T. Wynne, 2010-06-29 In 2005, famed civil rights leader and education activist Robert Moses invited one hundred prominent African American and Latino intellectuals and activists to meet to discuss a proposal for a campaign to guarantee a quality education for all children as a constitutional right—a movement that would "transform current approaches to educational inequity, all of which have failed miserably to yield results for our children." The response was passionate, and the meeting launched a movement. This book—emerging directly from that effort—reports on what has happened since and calls for a new scale of organizing, legal initiatives, and public definitions of what a quality education is. Essays include · Robert Moses's historically rooted call for citizens, especially young people, to make the demand for quality education · Ernesto Cortés's view from decades of work organizing Latino communities in Texas · Charles Payne's interview with students from the Baltimore Algebra Project, who organized to make historic demands on their district · Legal scholar Imani Perry's nuanced analysis of the prospects of making a case for quality education as a right guaranteed by the Constitution · Perspectives from scholars Lisa Delpit and Joan T. Wynne, and by teachers Alicia Caroll and Kim Parker, who provide examples of what quality education is, describing its goal, and how to guide practice in the meantime

algebra project baltimore: The Power in the Room Jay Gillen, 2019-09-24 How community-centered, peer-to-peer, youth knowledge exchanges are evolving into a strong economic and political foundation on which to build radical public education. Following in the rich traditions in African American cooperative economic and educational thought, teacher-organizer Jay Gillen describes the Baltimore Algebra Project (BAP) as a youth-run cooperative enterprise in which young people direct their peers' and their own learning for a wage. BAP and similar enterprises are creating an educational network of empowered, employed students. Gillen argues that this is a proactive political, economic, and educational structure that builds relationships among and between students and their communities. It's a structure that meets communal needs—material and social, economic and political—both now and in the future. Through the story of the Baltimore Algebra Project, readers will learn why youth employment is a priority, how to develop democratic norms and cultures, how to foster positive community roles for 20–30 year-olds, and how to implement educational accountability from below.

algebra project baltimore: *Democracy and Mathematics Education* Kurt Stemhagen, Catherine Henney, 2021-05-06 In Democracy and Mathematics Education, Kurt Stemhagen and Catherine Henney develop a way of thinking about the nature and purposes of math that is inclusive, participatory, and thoroughly human. They use these ideas to create a school mathematics experience that can enhance students' math abilities and democratic potential. They locate mathematics' origins in human activity and highlight the rich but often overlooked links between mathematical activity and democratic, social practices. Democratic mathematics education foregrounds student inquiry and brings to light the moral dimensions of a discipline that has both remarkable utility and inevitable limitations. For math educators, the book's humanities approach helps to see the subject anew. For philosophers, it provides an important real world context for

wrestling with perennial and timely questions, engaging democratic and evolutionary theory to transform school math. This alternative approach to mathematics and mathematics education provides a guide for how to use math to make democracy a larger part of school and wider social life. 2021 Winner of the AESA Critics' Choice Book Award.

algebra project baltimore: Our Sixties Paul Lauter, 2020 The social movements of the 1960s - still vital and challenging - seen through the author's experiences as a civil rights activist, a feminist, an antiwar organizer, and a radical teacher. Today, some fifty years after, we celebrate - or excoriate - the Sixties. Using his wide-ranging experience as an activist and writer, Paul Lauter examines the values, the exploits, the victories, the implications, and sometimes the failings, of the Movement of that conflicted time. In Our Sixties, Lauter writes about movement activities from the perspective of a full-time participant: 1964 Mississippi freedom schools; Students for a Democratic Society (SDS); the Morgan community school in Washington, DC, which he headed; a variety of antiwar, antidraft actions; the New University Conference, a radical group of faculty and graduate students; The Feminist Press, which he helped found; and the United States Servicemen's Fund, an organization supporting antiwar GIs. He got fired, got busted, got published, and even got tenure. He honed his skills writing for the New York Review of Books among other magazines. As a teacher he created innovative courses ranging from Revolutionary Literature and Contesting the Canon to The Sixties in Fiction, Poetry, and Film. He led the development of the groundbreaking Heath Anthology of American Literature and remains its general editor. Lauter's book offers both a retrospective look at the social justice struggles of the Sixties and an account of how his participation in these struggles has shaped his life. Social history as well as personal chronicle, this account is for those who recall that turbulent decade as well as for those who seek to better understand its impact on American politics and society in our current era.

algebra project baltimore: Your America John Siceloff, Jason Maloney, 2025-09-23 Approaching the topic of civic activism on both a national and local level, Your America reveals essential lessons from twelve stories of ordinary citizens accomplishing extraordinary changes in their communities. Like Bill Graham, mayor of tiny Scottsburg, Indiana, who took on the telecommunications giants and wired his town for free wifi; or Katie Redford, a young law student who dusted off the Alien Tort Claims Act of 1789 and ended up changing the way American corporations behave overseas. Each profile is the result of a story on Now, the popular PBS show with a viewership of over 21⁄2 million people. For fans of the show, community activists, and the blogosphere, this book provides a blueprint for working together locally to create a better global community.

algebra project baltimore: The WholeWorld is Texting Irving Epstein, 2015-06-26 The authors of this volume address multiple questions involving the nature of youth protest in the twenty-first century. Through their use of a case study approach, they comment upon the ways in which youth protest has been influenced by the electronic and social media and evaluate the effectiveness of protest activities, many of which were framed in reaction to neo-liberalism and state authoritarianism. A number of the authors further comment upon the utility of employing social movement theory to analyze the nature and character of protest actions, while others situate such events within specific political, social and cultural contexts. The case studies focus upon protest activities in Bahrain, Turkey, Iran, Cambodia, South Africa, China, Russia, Chile, Spain, and the U.S., and together, they offer a comparative analysis of an important global phenomenon. In so doing, the authors further address issues involving the changing nature of globalized protest participation, its immediate and long-term consequences, and the ways in which protests have encouraged a re-evaluation of the nature of inequality, as constructed within educational, social, and political spheres.

algebra project baltimore: Radical Possibilities Jean Anyon, 2014-03-14 The core argument of Jean Anyon’s classic Radical Possibilities is deceptively simple: if we do not direct our attention to the ways in which federal and metropolitan policies maintain the poverty that plagues communities in American cities, urban school reform as currently conceived is doomed to fail. With every chapter thoroughly revised and updated, this edition picks up where the 2005 publication left off, including a completely new chapter detailing how three decades of political decisions leading up to the “Great Recession” produced an economic crisis of epic proportions. By tracing the root causes of the financial crisis, Anyon effectively demonstrates the concrete effects of economic decision-making on the education sector, revealing in particular the disastrous impacts of these policies on black and Latino communities. Going beyond lament, Radical Possibilities offers those interested in a better future for the millions of America’s poor families a set of practical and theoretical insights. Expanding on her paradigm for combating educational injustice, Anyon discusses the Occupy Wall Street movement as a recent example of popular resistance in this new edition, set against a larger framework of civil rights history. A ringing call to action, Radical Possibilities reminds readers that throughout U.S. history, equitable public policies have typically been created as a result of the political pressure brought to bear by social movements. Ultimately, Anyon’s revelations teach us that the current moment contains its own very real radical possibilities.

algebra project baltimore: *The Choice We Face* Jon Hale, 2021-08-10 A comprehensive history of school choice in the US, from its birth in the 1950s as the most effective weapon to oppose integration to its lasting impact in reshaping the public education system today. Most Americans today see school choice as their inalienable right. In The Choice We Face, scholar Jon Hale reveals what most fail to see: school choice is grounded in a complex history of race, exclusion, and inequality. Through evaluating historic and contemporary education policies, Hale demonstrates how reframing the way we see school choice represents an opportunity to evolve from complicity to action. The idea of school choice, which emerged in the 1950s during the civil rights movement, was disguised by American rhetoric as a symbol of freedom and individualism. Shaped by the ideas of conservative economist Milton Friedman, the school choice movement was a weapon used to oppose integration and maintain racist and classist inequalities. Still supported by Democrats and Republicans alike, this policy continues to shape American education in nuanced ways, Hale shows—from the expansion of for-profit charter schools and civil rights–based reform efforts to the appointment of Betsy DeVos. Exposing the origins of a movement that continues to privilege middle- to upper-class whites while depleting the resources for students left behind, The Choice We Face is a bold, definitive new history that promises to challenge long-held assumptions on education and redefines our moment as an opportunity to save it—a choice we will not have for much longer.

algebra project baltimore: *Educating for Insurgency* Jay Gillen, 2014-08-18 A manifesto for today's broken schools. Desegregation has failed. Schools filled with black and brown students have become plantations of social control, where the policing of behavior trumps the expanding of minds. Radical teachers and organizers in American public schools must help young people fashion an insurgency. That means, at the very least, seeing each student's rebellion not as violation, but as communication. Jay Gillen writes with passion and compassion about the daily lives of poor students trapped in institutions that dismiss and degrade them. In the spirit of Paulo Freire, and using the historical models of slave rebellions and Civil Rights struggles as guides, Gillen explains what sort of insurgency is needed and how to create it: the tools and techniques required to build social, intellectual, and political power. This poetic manifesto of revolutionary "educational reform" belongs in the pocket of anyone who currently works in, suffers through, or simply cares about public schooling in this country. Jay Gillen teaches English in a Baltimore public school and has worked with the Baltimore Algebra Project since 1995, building math literacy among youth of color and youth experiencing poverty in US public schools. Bob Moses is an educator and Civil Rights activist. He founded the Algebra Project in 1982.

algebra project baltimore: 10 Great Curricula Thomas S. Poetter, 2012-01-01 With: Susan L. M. Bartow, Lara A. Chatman, Daniel Ciamarra, Christopher L. Cox, Dawn Mann, Kevin J. Smith, Kevin M. Talbert, Mary A. Webb and Amy Fisher Young. 10 Great Curricula is a collection of stories written by educators who have come to understand curricula differently as a result of their engagement with a graduate course and its instructor. The book represents the best of what can be found in teaching and learning, in general, and in the quest for meaningful ways to understand curricula in particular. The co-authors of this volume on "10 Great Curricula" framed their inquiries into progressive, democratic curricula, at least initially, through Marsh and Willis' (2007) notions of planned, enacted, and lived curricula. These frames helped the writers think about how to engage a curriculum as it is developed, delivered, and lived by its participants, and for the inquirers to actually become participantinquirers in the curriculum at hand. The chapters depict the power, the possibility, and the transformational potential of "great" progressive curricula today by locating them in schools and in the community, by making them come alive to the reader, and by suggesting means through which the reader can adopt a more progressive, democratic stance to curriculum

despite the seemingly overwhelming nature of the conservative, traditionalist, instrumentalist movements in curriculum, teaching, and assessment today. The book is intended for students of education, teaching, and curriculum, undergraduates, graduates, and practicing educational professionals, especially those looking for examples in the world in which progressive, democratic ideals are nurtured and practiced.
