algebra june 2024 regents: Discipline Problems Tadashi Dozono, 2024-05-07 Angel, a Black tenth-grader at a New York City public school, self-identifies as a nerd and likes to learn. But she's troubled that her history classes leave out events like the genocide and dispossession of Indigenous people in the Americas, presenting a sugar-coated image of the United States that is at odds with her everyday experience. "The history I learned in school is simpler," she says. "The world I live in is a lot more complex." Angel, like every student interviewed in Discipline Problems, has been identified by teachers as a "troublemaker," a student whose behavior disrupts classroom norms and interferes with instruction. But her critiques of the curriculum she's taught speak to her curiosity and insight, crucial foundations for understanding history. Like many students who have been marginalized by systemic racism in American schools, she exposes the shortcomings of her classrooms' academic environments by challenging both the content and the methods of her education. All too often, these challenges are framed as "troublemaking," and the students are disciplined for "acting out" instead of being rewarded for their intellectual engagement. Tadashi Dozono, a professor of education and former high school social studies teacher, takes seriously the often-overlooked critiques that students of color who get labeled as troublemakers direct toward their high school history curriculum. He reinterprets "troublemaking," usually cast as a behavioral deficit, as an intellectual asset and form of reasoning that challenges the "disciplining reason" of classrooms where whiteness is valued over the histories and knowledge of people of color. Dozono shows how what are traditionally framed as discipline problems can be seen through a different lens as responses to educational practices that marginalize non-white students. Discipline Problems reveals how students of color seek out alternate avenues for understanding their world and imagines a pedagogy that champions the curiosity, intellect, and knowledge of marginalized learners.

algebra june 2024 regents: Slow Burn R. Jisung Park, 2024-04-09 How the subtle but significant consequences of a hotter planet have already begun—from lower test scores to higher crime rates—and how we might tackle them today It's hard not to feel anxious about the problem of climate change, especially if we think of it as an impending planetary catastrophe. In Slow Burn, R. Jisung Park encourages us to view climate change through a different lens: one that focuses less on the possibility of mass climate extinction in a theoretical future, and more on the everyday implications of climate change here and now. Drawing on a wealth of new data and cutting-edge economics, Park shows how climate change headlines often miss some of the most important costs. When wildfires blaze, what happens to people downwind of the smoke? When natural disasters destroy buildings and bridges, what happens to educational outcomes? Park explains how climate change operates as the silent accumulation of a thousand tiny conflagrations: imperceptibly elevated health risks spread across billions of people; pennies off the dollar of productivity; fewer opportunities for upward mobility. By investigating how the physical phenomenon of climate change interacts with social and economic institutions, Park illustrates how climate change already affects everyone, and may act as an amplifier of inequality. Wealthier households and corporations may adapt quickly, but, without targeted interventions, less advantaged communities may not. Viewing climate change as a slow and unequal burn comes with an important silver lining. It puts dollars and cents behind the case for aggressive emissions cuts and helps identify concrete steps that can be taken to better manage its adverse effects. We can begin to overcome our climate anxiety, Park shows us, when we begin to tackle these problems locally.
