**free online algebra course for adults:** The Homeschooling Parent Kerridwen Mangala McNamara, 2022-09-09 So you've decided to homeschool. There's too much information out there and all of it is about what to do with your KIDS. There's precious little about what life is like for the Homeschooling Parent - and you want to know about things like... how will you socialize without school to help you get to know your kids' friends and their parents? what is it really like being home all day with your kids? why do other parents choose to homeschool? how are you ever going to handle high school (or middle school)? what are you going to do if you don't want to do this anymore? If it's way too hard? And the BIG Question: Are you going to fail your kids? This book is for YOU, the homeschooling parent (and for your support system of adults, though it's written for you). In these pages I will show you how to cope with teaching, chores, fears, and many of the everyday things that make us all stress out like crazy. Let me share with you the lessons learned from my six active kids (ages 20 down through 9 as of September 2022) and fifteen years of formal homeschooling, my experience running numerous homeschooling groups (for both parents and kids)... and from being a homeschooled kid (2nd-12th grades) myself. Your kid - and you - may have different ambitions, but let me tell you about how I - and my two homeschool graduates - have been accepted and successfully attended selective colleges in the USA. And the sports... yes, we've done sports as well as academics. And let me help you start (or continue) on your homeschooling journey as a friend who has gone this way first and hopes to smooth the road for you.

**free online algebra course for adults: Large-Scale Studies in Mathematics Education**

James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05 In recent years, funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large-scale studies with experimental and quasi-experimental designs looking for 'objective truths'. Educational researchers have recently begun to use large-scale studies to understand what really works, from developing interventions, to validation studies of the intervention, and then to efficacy studies and the final scale-up for large implementation of an intervention. Moreover, modeling student learning developmentally, taking into account cohort factors, issues of socioeconomic, local

political context and the presence or absence of interventions requires the use of large data sets, wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures, but these methods are not yet common knowledge in the mathematics education community. In fact, currently there is no volume devoted to discussion of issues related to large-scale studies and to report findings from them. This volume is unique as it directly discusses methodological issue in large-scale studies and reports empirical data from large-scale studies.

**free online algebra course for adults: *The Homeschooling Parent Teaches MATH!***

Kerridwen Mangala McNamara, 2023-11-10 We all worry about our kids learning math. Even if the kids are in school, there's always a concern. Sometimes it's about the kid's concern... sometimes it's about their teacher's concern (parent-teacher or otherwise). But a lot of the time it's about US. It's about our own math-phobias - those 'fears, dislikes, or aversions' that we picked up from our own math experiences and that we inadvertently pass on to our kids. We don't want them to be afraid of math - we know that limits their opportunities and makes their lives harder and costs them more money - but we just can't help it. This book is here to help you deal with your own math-phobias and come to - if not outright enjoy math, to at least appreciate it and be able to convey it to your kids without passing on the fear. Kerridwen Mangala McNamara is NOT a 'math-lover' but she is a math-appreciator and has worked through most of these issues herself. Let her help you along your homeschooling journey and show you how to fight the Fear-of-Math monster so that it no longer intimidates you - or your kids!

**free online algebra course for adults: *The Art of Learning Math* Susan Midlarsky, 2024-07-23**

Many parents and teachers struggle with math. How many times have you heard, "I hate math," "Math is not my thing," or, "I can't do math"? In our culture, innumeracy is acceptable. This acceptance fails to account for innumeracy's lifelong consequences, from not understanding statistics used in science and news to difficulty managing finances. *The Art of Learning Math* is a journey into what makes math meaningful. It takes the reader through the developmental stages of learning math, from infancy to adulthood. It weaves stories, examples, research references, reasons,

the arts, and evolutionary understandings to make it relevant and comprehensible to readers. It also provides concrete, actionable tools to help the reader be successful in their endeavor, whether that is to educate groups of children, their own children, or themselves.

**free online algebra course for adults:** *Higher Education at Risk* Sandra Featherman, 2023-07-03 Sandra Featherman believes that colleges are in denial about the severity of the threats

to the current model of higher education. Based on her own experience as a president, as a trustee, and as a board member who has worked in private and public universities – and on interviews with the presidents of major institutions – she offers both a trenchant analysis of those threats and clear prescriptions about the painful but necessary decisions that colleges need to make to ensure they remain viable, accessible and affordable, and deliver a high-quality education. Sandra Featherman considers higher education to be at a game-changing moment. When markets don't function well – as is the case with today's college marketplace with offerings that cost too much and return too little – it opens the door to new types of suppliers, who offer new ways of providing what students are looking for, particularly the increasing cohort of mature, working students. In the face of new competitors – for-profit education companies, technology start-ups, and foreign universities vying for international students – trustees and senior level administrators are generally stuck in a traditional ethos and with decision-making processes unsuited to these times. They know what used to work, and find it easier to follow old ways than to make the difficult transition to new ways of delivering education. She lays out a strategy: that emphasizes the centrality of students and how to provide them with the most effective learning environment; that is clear-eyed about focusing on the core missions, and abandoning practices that constrain or impede them; and that requires constant self-monitoring to learn from and act upon what works. She offers a blueprint for redesigning institutions, for paring away what is unnecessary and cost ineffective, and for adopting the best technologies, all in the service of developing meaningful degree programs at an affordable price, and widening access for under-represented groups. She ranges over the implications of budget decisions, accreditation, and MOOCs; addresses government regulation and tuition costs; presents promising new models; and concludes with 11 key recommendations that should be heeded by all higher education administrators and trustees.
