homeschool algebra 1 online: The Well-Trained Mind Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in The Well-Trained Mind to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. The Well-Trained Mind will give you the tools you'll need to teach your child with confidence and success.

homeschool algebra 1 online: Evaluating Online Learning Arthur T. Weston, 2009 Education in this country has evolved dramatically from the days of one teacher in a one-room schoolhouse. Today, student learning is no longer confined to a physical space. Computers and the Internet have broken through school walls, giving students greater opportunities to personalise their education, access distant resources, receive extra help or more-challenging assignments, and engage in learning in new and unique ways. This book provides a new look at the relatively new enterprise of online learning in the K-12 arena, which is expanding rapidly, with increasing numbers of providers offering services and more students choosing to participate. As with any education program, online learning initiatives must be held accountable for results. Thus, it is critical for students and their parents, as well as administrators, policymakers, and funders to have data informing them about program and student outcomes and, if relevant, about how well a particular program compares to traditional education models. Rigorous evaluations are essential to this process and are included in this book. They identify whether programs and online resources are

performing as promised, and equally important, they can point to areas for improvement.
