keystone algebra 1: Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government, states have increasingly turned to indicators based on student test scores to evaluate teachers and schools, as

well as students themselves. The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests, such as in mathematics or English/language arts with a focus on grades 4-8. Teachers in these subject areas, however, constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas, with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end-of-course tests, as well as alternative measures such as portfolios, exhibitions, and student learning objectives. In each case, issues related to design and development, psychometric considerations, and validity challenges are covered from both a generic and a content-specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research-based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field. keystone algebra 1: Non-traditional Versus Traditional Algebra 1 Mathematics Programs and Their Related Effects on Student Achievement on the Pennsylvania Algebra 1 Keystone Assessment Karen A. Haney, 2020 It should come as no surprise that the U.S. lags behind other nations in mathematics achievement of its students indicating that the U.S. is not effectively preparing its students for competitive careers. The mathematics programs used to teach American students are one of the most important factors in determining student success (in addition to quality of instruction and access to resources). The purpose of this quantitative research study, therefore, is to determine whether instruction utilizing a traditional or non-traditional Algebra 1 mathematics program will lead to higher student results on the Pennsylvania Algebra 1 Keystone assessment. Four schools (two utilizing a traditional Algebra 1 program and two utilizing a non-traditional Algebra 1 program) participated in this study with data provided from two Algebra 1 classes in each of the four schools. The data was disaggregated to measure student performance on the Algebra 1 Keystone assessment by gender, race, and socio-economic status. The effectiveness of both traditional and non-traditional Algebra 1 mathematics programs was determined as student results were analyzed on the May 2019 Pennsylvania Algebra 1 Keystone assessment. This study showed that the traditional Algebra 1 mathematics program led to higher student results. Despite the fact that the data is inconclusive for both gender and race, the data does show that Free and Reduced Lunch students in the traditional math classrooms performed better on the May 2019 Algebra 1 Keystone exam than those in a non-traditional Algebra 1 math classroom. It is hoped that results of this research study will support schools and districts in Pennsylvania in selecting math programs that both maximize student learning and improve performance on the Algebra 1 Keystone exam.
