nys algebra regents 2024: Discipline Problems Tadashi Dozono, 2024-05-07 Angel, a Black tenth-grader at a New York City public school, self-identifies as a nerd and likes to learn. But she's troubled that her history classes leave out events like the genocide and dispossession of Indigenous people in the Americas, presenting a sugar-coated image of the United States that is at odds with her everyday experience. "The history I learned in school is simpler," she says. "The world I live in is a lot more complex." Angel, like every student interviewed in *Discipline Problems*, has been identified by teachers as a "troublemaker," a student whose behavior disrupts classroom norms and interferes with instruction. But her critiques of the curriculum she's taught speak to her curiosity and insight, crucial foundations for understanding history. Like many students who have been marginalized by systemic racism in American schools, she exposes the shortcomings of her classrooms' academic environments by challenging both the content and the methods of her education. All too often, these challenges are framed as "troublemaking," and the students are disciplined for "acting out" instead of being rewarded for their intellectual engagement. Tadashi Dozono, a professor of education and former high school social studies teacher, takes seriously the often-overlooked critiques that students of color who get labeled as troublemakers direct toward their high school history curriculum. He reinterprets "troublemaking," usually cast as a behavioral deficit, as an intellectual asset and form of reasoning that challenges the "disciplining reason" of classrooms where whiteness is valued over the histories and knowledge of people of color. Dozono shows how what are traditionally framed as discipline problems can be seen through a different lens as responses to educational practices that marginalize non-white students. *Discipline Problems* reveals how students of color seek out alternate avenues for understanding their world and imagines a pedagogy that champions the curiosity, intellect, and knowledge of marginalized learners.

nys algebra regents 2024: *Coney Eyes* Paul Levine, 2024-03-18 From “Some Doo Wops And Those Rama Langa Ding Dongs” It was the 50s. Doo Wops fell from the sky, and we didn’t even notice that they lit our path, yet made no sense, but instead, merely soothed the painful edges and left us with the confusion of the 60s and the life beyond yet to come. From “How Many Times Are You Going To Get Married” After my second divorce, my mother asked me, “How many times are you going to get married?” I didn’t feel she was being sarcastic and so my response, “As many times as it takes,” wasn’t really called for. From “Coe and Larry” Coe sat at the kitchen table one morning staring at the back of the cereal box and turned up the volume of the new all-prayer radio station. She had been listing for two hours, waiting for something that would make it better. Ranging from coming of age and the difficulties of relationships, the stories in *Coney Eyes* are about the challenges of life, love, change, and becoming older.

nys algebra regents 2024: *Understanding Instructionally Useful Assessment* Carla Evans, Scott Marion, 2024-06-19 *Understanding Instructionally Useful Assessment* offers new insights into how various types of assessments, from the state to the classroom, will differ in their usefulness for supporting instructional decision-making and student learning. In order to most effectively serve students, it is essential that educators avoid conflating the assessment information that teachers use for instructional purposes and the data that leaders and administrators use for evaluative or monitoring purposes. This book provides classroom teachers as well as school and district leaders with a clear conception of what makes assessments—their purpose, design, reporting, and resulting information—useful or not for informing instruction and how they can select assessment tools suited to specific purposes. Each chapter addresses the knowledge and skills that K-12 staff need in order to challenge claims made by policymakers, test vendors, or even other educators that any assessment can be used to inform instruction. Educators will come away better prepared to remove unnecessary or redundant assessments from their systems and to create structures, policies, and processes that best support the instructional usefulness of assessments for student learning.

to mitigate the harms of climate change, economist R. Jisung Park writes. There are many subtle ways that a slowly warming planet affects social and economic well-being, including reduced learning outcomes, lower productivity, and exacerbated socioeconomic inequity. Problem-solvers and policymakers must consider these less catastrophic hidden costs and seek locally focused solutions that allow people to adapt to a slowly warming planet.
