anatomy museum atlanta: The Body Collected in Australia Eugenia Pacitti, 2024-03-21 Offering insight into nineteenth- and early twentieth-century medical school dissecting rooms and anatomy museums, this book explores how collected human remains have shaped Western biomedical knowledge and attitudes towards the body. To explore the role Australia played in the narrative of Western medical development, Pacitti focuses on how and why Australian anatomists and medical students obtained human body parts. As medical knowledge circulated between Australia and Britain, the colony's physicians conformed to established specimen collecting practices

and diverged from them to form a distinct medical identity. Interrogating how these literal and figurative bones of contention have left an indelible mark on the nation's medical profession, collecting institutions, and communities, Pacitti sheds new light on our understanding of Western medical networks and reveals the opportunities and challenges historic specimen collections pose in the present day. The Body Collected in Australia is a cultural history of collectors and collections that deepens our understanding of the ways the living have used the dead to comprehend the intricacies of the human body in illness and good health.

anatomy museum atlanta: Corpses in Belgian Anatomy, 1860-1914 Tinne Claes, 2019-11-20 This book tells the story of the thousands of corpses that ended up in the hands of anatomists in the late nineteenth and early twentieth centuries. Composed as a travel story from the point of view of the cadaver, this study offers a full-blown cultural history of death and dissection, with insights that easily go beyond the history of anatomy and the specific case of Belgium. From acquisition to disposal, the trajectories of the corpse changed under the influence of social policies, ideological tensions, religious sensitivities, cultures of death and broader changes in the field of medical ethics. Anatomists increasingly had to reconcile their ways with the diverse meanings that the dead body held. To a certain extent, as this book argues, they started to treat the corpse as subject rather than object. Interweaving broad historical evolutions with detailed case studies, this book offers unique insights into a field dominated by Anglo-American perspectives, evaluating the similarities and differences within other European contexts.

anatomy museum atlanta: Trends in Biological Anthropology 1 Karina Gerdau-Radonić, Kathleen McSweeney, 2015-06-30 This first volume in the series Trends in Biological Anthropology presents 11 papers. The study of modern baboons as proxies to understand extinct hominin species' diet and the interpretation of skeletal degenerative joint disease on the skeletal remains of extant primates are presented as case studies using methods and standards usually applied to human remains. The methodological theme continues with an assessment of the implications for interpretation of different methods used to record Linear Enamel Hypoplasia (LEH) and on the use and interpretation of three dimensional modeling to generate pictures of the content of collective graves. Three case studies on palaeopathology are presented. First is the analysis of a 5th-16th century skeletal collection from the Isle of May compared with one from medieval Scotland in an attempt to ascertain whether the former benefitted from a healing tradition. Study of a cranium found at Verteba Cave, western Ukraine, provides a means to understand interpersonal interactions and burial ritual during the Trypillian culture. A series of skulls from Belgrade, Serbia, displays evidence for beheading. Two papers focus on the analysis disarticulated human remains at the Worcester Royal Infirmary and on Thomas Henry Huxley's early attempt to identify a specific individual through analysis of skeletal remains. The concept and definition of 'perimortem' particularly within a Forensic Anthropology context are examined and the final paper presents a collaborative effort between historians, archaeologists, museum officers, medieval re-enactors and food scientists to encourage healthy eating among present day Britons by presenting the ill effects of certain dietary habits on the human skeleton.

anatomy museum atlanta: Sacred Body Roberta Sterman Sabbath, 2023-05-30 Sacred Body: Readings in Jewish Literary Illumination provides fresh and insightful interpretations of Jewish texts, narratives, and cultural practices that show how these artifacts unhinge the "sacred" from the divine and focus instead on the "everyday sacred" of a dynamic earthly existence that emphasizes the body, celebrates life-affirming decisions, actions, and relationships, and avoids abstraction, metaphysics, and apocalypticism. Roberta Sabbath argues that a diverse array of Jewish artifacts, from sacred scripture to contemporary novels and ballet performance, articulate a tradition that has existed for millennia in mythic, proto-historic, legalistic, mystical, philosophical, and aesthetic expressions of Jewishness. The author refers to this tradition as Jewish literary illumination, and she deftly demonstrates how it illuminates the most salient message of Judaism: that earthly existence and the body are also the site of the spiritual and the sacred.

anatomy museum atlanta: The Heart of Leonardo Francis Wells, 2014-07-08 This book contains all of Leonardo Da Vinci's drawings on the heart and its physiology, accompanied by re-translations of all of the associated notes. All Leonardo's drawings have been interpreted in the light of modern knowledge by a practicing cardiac clinician and anatomist. The veracity of his work is proven against contemporary dissections of cardiac structure and comparison of his illustrations with contemporary images generated by Magnetic Resonance scanners and high definition ultrasound will astound the reader. Perhaps the most interesting element is the re-dissection of the Ox heart set against Leonardo's own drawings. His place in the greater scheme of anatomical development will be put into context with his ideas of man's place in the microcosm/macrocosm continuum.
