anatomy stickers: Biomedical Visualisation Paul M. Rea, 2019-12-10 With the rapid advances of technology, visualisation in the sciences using computers, is a rapidly expanding and evolving area. Visualisation in its broadest sense represents how objects, situations, applications, methodologies and information can be seen and presented. This proposal is to incorporate work in the field of biomedical visualisation and will encompass techniques of using computers to visualise information. This will include photogrammetry, virtual and augmented reality, 3D printing, e-tutorial and website design and digital reconstructions and animations. It will showcase research, innovations and current work in the field of biomedicine, life sciences, veterinary medicine and computing sciences presenting data in an innovative and engaging way to showcase complex data and information in an easier to access format.

anatomy stickers: Humor in Young Adult Literature Walter Hogan, 2005 Celebrates the accomplishments of YA authors acclaimed for producing high-quality comedies, who have not yet been treated in a book-length bio-critical study. Simultaneously, it reminds readers that no matter how funny an author of fiction may be, if he shows off his wit in ways that fail to play a natural role in advancing his narrative, he is not writing good fiction. To demonstrate this, humorous passages are presented to illustrate the contribution a sense of humor can make to a work of fiction. The book is arranged topically to facilitate a comparison of distinctive treatments by various authors of adolescent life events, such as sibling rivalry, bullies, and first dates.
