**online human anatomy course free: The Teacher in the Machine** Anne Trumbore, 2025-04-22 The surprising history of education technology and its political, financial, and social impact on higher education and our world From AI tutors who ensure individualized instruction but cannot do math to free online courses from elite universities that were supposed to democratize higher education, claims that technological innovations will transform education often fall short. Yet, as Anne Trumbore shows in *The Teacher in the Machine*, the promises of today's cutting-edge technologies aren't new. Long before the excitement about the disruptive potential of generative AI-powered tutors and massive open online courses, scholars at Stanford, MIT, and the University of Illinois in the 1960s and 1970s were encouraged by the US government to experiment with computers and artificial intelligence in education. Trumbore argues that the contrast between these two eras of educational technology reveals the changing role of higher education in the United States as it shifted from a public good to a private investment. Writing from a unique insider's perspective and drawing on interviews with key figures, historical research, and case studies, Trumbore traces today's disparate discussions about generative AI, student loan debt, and declining social trust in higher education back to their common origins at a handful of elite universities fifty years ago. Arguing that those early educational experiments have resonance today, Trumbore points

the way to a more equitable and collaborative pedagogical future. Her account offers a critical lens on the history of technology in education just as universities and students seek a stronger hand in shaping the future of their institutions.

**online human anatomy course free: International Anatomical Education** Iain D. Keenan, Isabel Stabile, Asha Venkatesh, 2025-08-10 Anatomy is intrinsically a three-dimensional and visual discipline. Anatomical education is therefore primarily delivered using physical and digital three-dimensional visual approaches to support student understanding of anatomy, including human body donor specimens and technology-enhanced learning resources. The Trans-European Pedagogic Anatomy Research Group (TEPARG) was founded in 2003 to promote scholarly, research-informed, and evidence-based approaches to the design and implementation of anatomical education. TEPARG brings together enthusiastic anatomy teachers and pedagogic researchers from across Europe and beyond to share good practice and create new projects in support of anatomical education. The work presented in this volume demonstrates careful consideration by the authors of several key areas within the current complex landscape of international anatomical education. This volume is presented in two subthemes, with the first section concerning broad considerations of modern anatomy curricula in England, Scotland, Wales, and Austria, and the second section involving

discussion of pedagogic innovations for the delivery of anatomical education to learners and to the wider public in Italy, Spain, Australia, and the United Kingdom. The work presented in this volume will have implications for anatomical educators and pedagogic researchers in the anatomical sciences who are seeking to develop their own anatomy curricula, and to implement effective, evidence-based, and research informed visualization strategies and innovations into their teaching.
