online anatomy degree: *Biomedical Visualisation* Ourania Varsou, Paul M. Rea, Michelle Welsh, 2022-12-16 This book focuses on the challenges to biomedical education posed by the lockdowns and restrictions to on campus teaching brought about by the COVID-19 pandemic and highlights the tools and digital visualization technologies that have been successfully developed and used for remote teaching. Biomedical education for science, medical, dental and allied health professionals relies on teaching visual and tactile knowledge using practice-based approaches. This has been delivered for decades via on-campus lectures, workshops and laboratories, teaching practical skills as well as fundamental knowledge and understanding. However, the arrival of the COVID-19 pandemic meant that education across the globe had to pivot very quickly to be able to deliver these skills and knowledge in a predominantly online environment. This brought with it many challenges, as Higher Education staff, had to adapt to deliver these visual subjects remotely. This book addresses the challenges and solutions faced by Higher Education staff in teaching visual content in distance education. Chapters include literature reviews, original research, and pedagogical reflections for a wide range of biomedical subjects, degrees such as medicine, dentistry and veterinary sciences with examples from undergraduate and postgraduate settings. The goal of the book is to provide a compendium of expertise based on evidence gathered during the COVID-19 pandemic, as well as reflections on the challenges and lessons learned from this dramatic shift in teaching. It also presents new examples of best practices that have emerged from this experience to ensure that they are not lost as we return to on-campus learning in a new era of biomedical teaching. This book will be of interest to anyone looking for a helpful reference point when designing online or blended teaching for visual practice-based subjects.

online anatomy degree: Adapting to Online and Blended Learning in Higher Education David Kember, Robert A. Ellis, Si Fan, Allison Trimble, 2023-05-19 Higher education has undergone a massive transformation in teaching and learning in a very short period of time since the onset of Covid-19. Students, teachers and universities have had to adopt online and blended learning, often with little or no experience or models of good practice to draw upon. It is clear that blended and online learning are here to stay. This book draws on research from universities that have adopted online and blended learning to facilitate the expansion and diversification of their intake; which resulted in considerable experience and expertise in online and blended teaching. The book describes a model, tested with qualitative and quantitative data, which shows how teachers can support the retention and success of online and blended learners with four high-quality pedagogical elements: bite-sized videos of interest and relevance; learning materials that are well organised and provide a clear learning roadmap; discussion forums which are set up and moderated so as to result in lively student-student and student-teacher interaction; and, online teachers being approachable and responsive to communication with individual students through email, phone and online communication platforms. This model is explained and profusely illustrated with examples from the teaching of award-winning teachers. This book introduces the concept of a spectrum from traditional to contemporary models of admission and course delivery in higher education. It explains how universities which have adopted a contemporary model, with high levels of blended and online learning, have been able to expand their intake and markedly diversify the student body. It discusses

how to support the retention and success of online and blended learners. Student support services are examined from the perspectives of service providers and online and blended learners and the case is made for support services being aligned with student needs. The book has a discussion of university management systems which utilise feedback at all levels to improve alignment between support service provision and student needs.

online anatomy degree: *International Anatomical Education* Iain D. Keenan, Isabel Stabile, Asha Venkatesh, 2025-08-10 Anatomy is intrinsically a three-dimensional and visual discipline. Anatomical education is therefore primarily delivered using physical and digital three-dimensional visual approaches to support student understanding of anatomy, including human body donor specimens and technology-enhanced learning resources. The Trans-European Pedagogic Anatomy Research Group (TEPARG) was founded in 2003 to promote scholarly, research-informed, and evidence-based approaches to the design and implementation of anatomical education. TEPARG brings together enthusiastic anatomy teachers and pedagogic researchers from across Europe and beyond to share good practice and create new projects in support of anatomical education. The work presented in this volume demonstrates careful consideration by the authors of several key areas within the current complex landscape of international anatomical education. This volume is presented in two subthemes, with the first section concerning broad considerations of modern anatomy curricula in England, Scotland, Wales, and Austria, and the second section involving discussion of pedagogic innovations for the delivery of anatomical education to learners and to the wider public in Italy, Spain, Australia, and the United Kingdom. The work presented in this volume will have implications for anatomical educators and pedagogic researchers in the anatomical sciences who are seeking to develop their own anatomy curricula, and to implement effective, evidence-based, and research informed visualization strategies and innovations into their teaching.

online anatomy degree: Biomedical Visualisation Leonard Shapiro, Paul M. Rea, 2022-09-15 This image-rich book explores the practice as well as the theory of visual representation and presents us with the importance of designing appropriate images for communication to specific target audiences. This includes the appropriate choice of high-tech digital or low-tech analogue technologies in image-making for communication within the medical education, biological research and community health contexts. We hear from medical students about the value of using clay modelling in their understanding of anatomy, from educators and curriculum designers about visual affordances in medical education and from a community-driven project in South Africa about their innovative use of locally designed images and culture-specific narratives for communicating important health information to marginalised communities. A chapter explores the evolution of scientific visualisation and representation of big data to a variety of audiences, and another presents the innovative 3D construction of internal cellular structures from microscopic 2D slices. As we embrace blended learning in anatomy education, a timely chapter prompts us to think further about and contribute to the ongoing discourse around important ethical considerations in the use and sharing of digital images of body donors. This book will appeal to educators, medical illustrators, curriculum designers, post-graduate students, community health practitioners and biomedical researchers.
