appian business process management suite: Business Process Management Andreas Gadatsch, 2023-05-27 This textbook bridges the gap between business management and organisational methods and their digital implementation, because process management increasingly means designing operational tasks. In addition to methodological basics, the work offers many practical examples and exercises. Prof. Gadatsch's book is now considered the current classic, THE authoritative standard work on IT-supported design of business processes. The tenth edition has been revised and adapted to the requirements of the digital transformation. Process management has evolved greatly due to the trend of digitalisation and as a result of the pandemic. Another related trend is the increased use of Data Science methods for process management, which has been consequently named Process Science at scientific conferences. Recent research results published under the heading of Explorative Process Management are also of particular importance. They show that the first main phase of process management was rather focused on optimising existing processes and business models. New practical examples were included at various points in the book, for example the migration strategies for the ERP system SAP S/4 HANA, which is the basis for many industrial and service processes. The chapter on modelling processes was updated and newer methods such as Business Model Canvas were included.

appian business process management suite: Dynamic Business Process Management in the Knowledge Economy Marek Szelągowski, 2019-06-21 This book describes modern dynamic business process management (dynamic BPM), which is considerably different from traditional BPM from 20, 10, or even 5 years ago. It demonstrates why traditional BPM is not sufficient in the knowledge economy (KE), while also highlighting the opportunities provided by dynamic BPM – the form of management that practitioners and academics deal with on a daily basis. This involves mastering and implementing e.g. case management, process mining, and RPA, and integrating them with knowledge management. But more importantly, dynamic BPM makes full use of the dynamism of knowledge workers: the people who actually create innovative products and services tailored to the specific needs of clients. The book was primarily written for those managers who see advantageous opportunities amidst the ongoing changes. Accordingly, it focuses more on innovations emerging from practice than on theoretical, academic reflection. In addition to helping organizations operating in the KE to prepare for and implement process management, the book is intended as a source of inspiration for process management researchers and iBPMS system vendors.
