**best business masters programs: The Encyclicon - Volume 2** Thomas L. Saaty, Brady Cillo, 2021-02-28 Volume 2 has a very detailed description of the strategic criteria used to rate the importance of the sub networks of Benefits - Opportunities - Costs and Risks (BOCR) The Encyclicon is an advanced dictionary of structures used to represent complex decisions. The first dictionary of hierarchic decision making was the Hierarchon. Since hierarchies are a special case of networks, the examples given here can be regarded as more general and complete representation of decision making. In particular, except for a group of market share examples, they all involve decisions made by considering Benefits (B), Opportunities (O), Costs (C) and Risks (R). They also involve a synthesis of these BOCR merits into a single overall best outcome for a decision. This is the first volume of the series of Encyclicon books. Each of the books contains different models from different years, collected by a different author along with Thomas L. Saaty and although all books tackle similar topics there are different models and different approaches on how to summarize and represent models for general use. These books are meant as a reference guide when you try to set up ANP or AHP complex decision models. The case studies in the books are linked to online reference material related to that which often include the super decision model, power point presentation and the original report of the case.
