bombardier business jet: Subsonic versus Supersonic Business Jets - Full Concept Comparison considering Technical, Environmental and Economic Aspects Michael Hans-Reichel, 2012-01-19 Inhaltsangabe: Introduction: On the 26th of August 2010 the new ultra-large-cabin ultra-long-range Gulfstream G650 business jet reached Mach 0.995 during its flight test campaign (1). This is almost the speed of sound (Mach 1) and inspires one to say, why not fly faster than the speed of sound! Reduce travelling time in the commercial business aviation segment. This is, however not a completely new vision. Many companies and research facilities have already spent a lot of time and investment in studies to investigate the feasibility of supersonic flight. Entry Into Service (EIS) for the new Gulfstream G650 is scheduled for 2012. In the following the main performance parameter of the G650 aircraft will be summarised. The parameters range, cruise speed, MTOW, etc. have been selected and serve as a basis to allow an appropriate comparison between the G650 as the latest high end Subsonic Business Jet and potential in future Supersonic Business Jets (SSBJ) within this subject Master Thesis. With the impressive maximum range of nearly 13,000 km the G650 can connect Dubai with New York or London with Buenos Aires within almost 14 hours. Maximum Range @ Normal Cruise Speed: 7,000 nm/12,964 km. Normal Cruise Speed Mach: 0.85/904 km/h. Mmo (Maximum Operating Mach Number): Mach 0.925. Maximum Cruise Altitude: 51,000 ft/15,545 m. Maximum Takeoff Weight (MTOW): 99,600 lb/45,178 kg. Maximum Fuel Weight: 44,200 lb/20,049 kg. Passengers: 11 18. Price: appr. 60-70 million USD. Gulfstream business rival Bombardier Aerospace also announced in October 2010 two new high end models, the Global 7000 and 8000 with a maximum range of 7,300 nm (13,520 km) and 7,900 nm (14,631 km) at cruise speed Mach 0.85. Entry Into Service is scheduled for 2016 (Global 7000) and 2017 (Global 8000). A comprehensive overview of business jets in service and in development is given in attachment 13.1. A Supersonic Business Jet flying at Mach 2 cruise speed could virtually halve the travelling time, which would enormously enhance the mobility and flexibility. In order to achieve this ambition a paradigm shift is required. New technologies must be established, the impact on the environment must be understood and minimised, existing regulations must be changed to permit overland flight restrictions and the product still needs to be economically viable. All of the above aspects must be considered and will be subject for discussion within this Master Thesis (See also figure [...])

bombardier business jet: Bombardier's CRJ - Rumors of its Demise are Greatly Exaggerated Ernest S Arvai, Addison M Schonland, 2017-03-15 We conclude that the Bombardier CRJ program, considering the various equipment advances and technology improvements, remains an effective and credible regional jet option. The CRJ will certainly be effective through 2019, and if US scope clause size limits do not ease, will be effective through 2024. Rumors of its premature demise are therefore overstated.

bombardier business jet: *Biz Jets* Almarin Phillips, A. Paul Phillips, Thomas R. Phillips, 2012-12-06 *Biz Jets: Technology and Market Structure in the Corporate Jet Aircraft Industry* traces the development of business jet aircraft from the mid-1950s through early 1993. It begins with a discussion of the technological and market opportunities existing in the period prior to the introduction of the Lockheed JetStar and the North American Sabreliner. The subsequent appearances of other biz jets -- the Learjets, HS-125s, Jet Commanders, Falcons, Gulfstreams, Citations, Challengers, Mitsubishiis and derivative aircraft are treated in considerable detail. *Biz Jets* also covers 'planes involved in many unsuccessful attempts to enter the industry from 1955 through 1993. The study shows that while the industry has been quite concentrated throughout its history, the positions of the leading firms have always been contestable. Indeed, leaders at one point in time have often been displaced by others who succeeded in marshalling technological and market opportunities to their advantage. Manufacturers have had to undertake continuous efforts to improve the price-performance characteristics of their aircraft to gain and hold their market shares. Rivalries in the effective use of the stream of new technologies have brought forth new aircraft with both better performance and lower operating costs. At the same time, however, participation in the market has been extremely risky. Only a few companies have been able to earn profits. Entries, exits and mergers have altered the structure of the industry, but it remained decidedly unstable at least through 1992.

bombardier business jet: *The Global Commercial Aviation Industry* Sören Eriksson, Harm-Jan Steenhuis, 2015-07-16 This book provides a state-of-the-art overview of the changes and development of the civil international aircraft/aviation industry. It offers a fully up-to-date account of the international developments and structure in the aircraft and aviation industries from a number of perspectives, which include economic, geographical, political and technological points of view. The aircraft industry is characterized by very complex, high technology products produced in relatively small quantities. The high-technology requirements necessitate a high level of R&D. In no other industry is it more of inter-dependence and cross-fertilisation of advanced technology. Consequently, most of the world's large aircraft companies and technology leaders have been located in Europe and North America. During the last few decades many developing countries have tried to build up an internationally competitive aircraft industry. The authors study a number of important issues including the political economy of the aircraft industry, globalization in this industry, innovation, newly industrializing economies and the aircraft industry. This book also explores regional and large aircraft, transformation of the aviation industry in Central and Eastern Europe, including engines, airlines, airports and airline safety. It will be of great value to students and to researchers seeking information on the aircraft industry and its development in different

regions.

bombardier business jet: Reducing Business Jet Carbon Footprint Dr. Thomas F. Johnson, 2023-09-12 When using the electric taxi system, pilots will be able to load up their passengers, taxi to the runway run up area, and start their engines—all without using fuel. Reducing Business Jet Carbon Footprint details how business jets equipped with the aircraft electric taxi system will be able to land, turn off main engines and taxi on the tarmac using electric power. Aerospace engineer/scientist and licensed FAA commercial pilot Dr. Thomas F Johnson describes how the electric taxi system saves fuel (and reduces emissions) for medium to long range business jets by using electricity for certain aspects before take-off and after landing. Dr. Johnson's work as an Aerospace engineer has rewarded him with three patents related to the aircraft gas turbine engine (GTE). His knowledge of commercial flight and plane mechanics are featured in Reducing Business Jet Carbon Footprint, where he explains the details (and potential costs) of installing the electric taxi system. Johnson examines how the use of clean energy will improve airport air quality and preserve fuel consumption for when it's needed. His writing models and simulates the exciting new technological opportunities for air travel—ready to be put into service.
