business at uts: Business Informatics Silke Retzer, 2003-05-19 Inhaltsangabe:Abstract: This study gives an overview about the Business Informatics discipline in Australia with a strong focus on Business Informatics aspects at Australian universities. Therefore the different terms Business Informatics and Information Systems (IS) are defined first in chapter 2. The approach taken to

exploring Business Informatics at Australian universities was to conduct intensive interviews with eleven Australian university IS academics within the following states and territories of the country: Queensland, New South Wales, The Australian National Capital and Victoria. Questions were asked relating to the specific university, the educational Business Informatics courses on offer, the organisational structure and cultural aspects within the Business Informatics discipline. The results of the interviews are then supported by a strong web and literature review and are shown summarized in chapter 3. Additional information was obtained by the 13th Australasian Conference on Information Systems (ACIS) from 4th to 6th of December 2002 at the Victoria University Building in Melbourne. The conference gave an insight into topics as Online Learning, the IS discipline at universities and Approaches for Problem-Based Learning in Information Systems. These conference papers are summarized presented in chapter 4. This detailed overview of IS in Australian universities can then be compared to the Business Informatics discipline in German universities. Several aspects are considered for this in chapter 5 like the educational offers within this discipline area, the organisational structure of Business Informatics/IS within universities and cultural aspects in dependence to the structure of the interview guideline. Differences and similarities within the Business Informatics/IS discipline in higher education between Germany and Australia are explored, which is the aim of this study. Additional recommendations from the author should be seen as a thought-provoking-impulse and support further development in higher education.

business at uts: Academic Writing and Interdisciplinarity Ranamukalage Chandrasoma, 2010-09-13 Applied linguistics as a discipline embodies a wide canvass of knowledge pertaining to language studies. One dimension of this knowledge that has whetted the appetite of scholars is student academic writing. Professor Chandrasoma's book critically explores academic interdisciplinarity, a relatively new area of student writing in our contemporary contexts, from different perspectives: approaches to ESL/EFL/EAP, disciplinary integration, linguistic capital, pedagogical practices in applied linguistics, generically diverse assessment tasks, extra-disciplinarity, pedagogic desire, curricular issues, and socio-economic imperatives. His work

also offers a comprehensive study of how student writers grapple with interdisciplinary knowledge in the academy. In Chapter two, the author introduces a typology of interdisciplinarity, and he substantiates his claims with empirical evidence, thus demystifying its abstract and vague definitions abounding in the literature. This is an area where he really breaks fresh grounds. The intellectual intensity of this book emerges largely from the novel concepts introduced in his discussions on interdisciplinary integration in the university curricula in the last two decades. Since almost every discipline has crossed its boundaries, student writing has become a more complex and intricate academic exercise as has never been before. Professor Chandrasoma emphasizes the need for knowledge for specific purposes programs peripheral to the currently used English for academic/specific purposes programs in universities in order to enculturate novice student writers into the new culture of interdisciplinary integration. This seminal work proposes critical interdisciplinarity as a sustainable pedagogical practice to cope with a plethora of difficulties encountered by student writers at various stages of constructing their texts. The book meets a long felt need as evidenced by the paucity of literature on interdisciplinary studies in particular reference to student writing. Hence this book is an asset to language teachers, academic support advisors, curriculum developers, researchers in linguistics, and student writers. As far as academic disciplines are concerned, the book has a specific focus on English language (ESL/EFL/EAP), applied linguistics, and education. The book will also serve as an invaluable resource for various programs where academic literacies are vital. In particular it lends itself to programs such as foundation studies, developmental education, and interdisciplinary studies both at graduate and postgraduate levels in universities and colleges.

business at uts: Business and the Ethical Implications of Technology Kirsten Martin, Katie Shilton, Jeffery Smith, 2022-11-09 This book focuses on how firms should engage ethical choices in developing and deploying digital technologies. Digital technologies are devices that rely on rapidly accelerating digital sensing, storage, and transmission capabilities to intervene in human processes. While the ethics of technology is analyzed across disciplines from science and technology studies (STS), engineering, computer science, critical management studies, and law, less attention is paid to the role that firms and managers play in the design, development, and dissemination of technology across communities and within their firm. This book covers the topic from three angles. First, it illuminates diverse facets of the intersection of technology and business ethics. Second, it uses themes to explore what business ethics offers to the study of technology and, third, what technology studies offers to the field of business ethics. Each field brings expertise that, together, improves our understanding of the ethical implications of technology. Chapter "A Micro-ethnographic Study of Big Data-Based Innovation in the Financial Services Sector: Governance, Ethics and Organisational Practices, chapter "The Challenges of Algorithm-Based HR Decision-Making for Personal Integrity and chapter "Female CEOs and Core Earnings Quality: New Evidence on the Ethics Versus Risk-Aversion Puzzle are available open access under a Creative Commons Attribution 4.0 International license via link.springer.com.

business at uts: Organised Retailing and Agri-Business N. Chandrasekhara Rao, R. Radhakrishna, Ram Kumar Mishra, Venkata Reddy Kata, 2015-10-07 This book examines the performance of organized retail chains supplying the agri-input and output services in terms of achieving their objective of utilising collective bargaining power in the marketing of their agricultural produce, integrating empirical experience from India and other selected developing countries. The scenario of marketing for agricultural products has been undergoing rapid changes with the rise of organised retailing (the Indian term for 'supermarkets'), a process that is likely to accelerate in years to come, with India being on the threshold of a supermarket revolution. In fact, India is referred to as the 'final frontier' in the development of supermarkets. The growth of supermarkets in India is faster than that in China, which is also witnessing an exponential growth as part of the "third wave" of supermarket diffusion. The book investigates the links between organised retailing and farmers and farming in India. Apart from raising issues of equity, inclusion and problems in policy framework, it also discusses policy interventions that are essential in order to make the development of organised retailing more inclusive and beneficial to the farming community and agricultural sector. The book further serves as a guide for policy makers, helping them to select the right kind of interventions to balance growth with equity as market forces penetrate deeper into the agricultural marketing space.
