Understanding Business Method Patents

A business method patent is a specific category of patent that protects a particular way of doing business. This could include methods of conducting financial transactions, managing customer relationships, or processing data. Unlike traditional patents that often cover tangible inventions, business method patents protect abstract concepts and methodologies that provide a competitive advantage.

To qualify for a business method patent, the method must meet certain criteria, including novelty, non-obviousness, and usefulness. The U.S. Patent and Trademark Office (USPTO) examines each application to ensure it meets these standards, allowing businesses to safeguard their innovative practices effectively.

Differences Between Business Method Patents and Other Patents

Business method patents differ from utility patents and design patents primarily in their subject matter. Utility patents cover new inventions or functional improvements, while design patents protect the ornamental design of an article. Business method patents, on the other hand, focus on the processes or methods of doing business.

Furthermore, the legal requirements and examination processes may vary. Business method patents often face greater scrutiny due to their abstract nature, requiring a clear demonstration of how the method achieves practical results in business contexts.

Historical Context

The concept of business method patents gained traction in the late 20th century as technology transformed the business landscape. The landmark case of *State Street Bank & Trust Co. v. Signature Financial Group* in 1998 played a pivotal role in legitimizing business method patents. The court ruled that a method for managing mutual funds was patentable, leading to a surge in applications for similar patents.

This decision marked a significant shift in patent law, as it allowed for the protection of business methods previously considered unpatentable. However, subsequent legal challenges and decisions have led to a more nuanced interpretation of what constitutes a patentable business method.

Recent Developments in Business Method Patent Law

In 2010, the *Bilski v. Kappos* case further clarified the standards for patenting business methods. The Supreme Court ruled that business methods are patentable as long as they are tied to a specific machine or transform a particular article. This ruling has continued to shape how business method patents are evaluated and granted.

As the legal landscape evolves, businesses must stay informed about changes in patent law that could impact their ability to secure protections for their methodologies.

The Process of Obtaining a Business Method Patent

Obtaining a business method patent involves several key steps that require careful planning and execution. The process can be complex, and many businesses choose to collaborate with patent attorneys to navigate the intricacies involved.

Step-by-Step Guide to the Application Process

1. **Conduct a Patent Search:** Before applying, it is essential to conduct a thorough

patent search to determine if similar patents exist.

2. **Prepare a Detailed Description:** Create a comprehensive description of the business method, including its purpose, advantages, and how it operates.
3. **Draft Claims:** Define the claims of the patent, outlining the specific aspects of the method you wish to protect.
4. **File the Application:** Submit the application to the USPTO, including all necessary documentation and fees.
5. **Respond to Office Actions:** Be prepared to respond to any inquiries or rejections from the patent examiner.
6. **Receive Patent Grant:** If approved, you will receive a patent grant, allowing you to enforce your rights.

This process can take several months to years, depending on the complexity of the application and the backlog at the USPTO.

Advantages of Business Method Patents

Business method patents offer numerous advantages for companies looking to protect their innovative processes. By securing a patent, businesses can gain a competitive edge in their respective markets.

Key Benefits of Securing a Business Method Patent

- **Exclusive Rights:** A patent grants exclusive rights to the inventor, preventing others from using the patented method without permission.
- **Increased Valuation:** Patents can enhance the overall valuation of a company, making it more attractive to investors.
- **Market Differentiation:** Patented methods can differentiate a business from competitors, providing a unique selling proposition.
- **Revenue Generation:** Companies can license their patented methods to others, creating additional revenue streams.

These benefits highlight the strategic importance of securing a business method patent in a competitive landscape.

Challenges and Limitations

Despite their advantages, business method patents also come with challenges and limitations that businesses must consider. The abstract nature of these patents can lead to difficulties in enforcement and litigation.

Common Challenges Faced by Businesses

- **High Costs:** The process of obtaining and maintaining a patent can be expensive, requiring legal fees and maintenance fees.
- **Litigation Risk:** Patents can lead to disputes and litigation, which can be costly and time-consuming.
- **Abstractness Concerns:** The abstract nature of many business methods may result in rejections during the patent examination process.
- **Rapid Technological Changes:** The fast-paced nature of technology can render certain methods obsolete, affecting the longevity of the patent.

Understanding these challenges is crucial for businesses considering applying for a business method patent.

Impact on Business Strategy

Securing a business method patent can significantly influence a company's overall business strategy. It allows firms to protect their innovations and create barriers to entry for competitors.

Strategic Considerations for Businesses

Businesses should consider the following strategic factors when contemplating a business method patent:

- **Alignment with Business Goals:** Ensure that the patented method aligns with the long-term goals of the company.
- **Market Analysis:** Conduct market research to assess the potential impact of the patent on market position.
- **Licensing Opportunities:** Evaluate potential licensing opportunities to monetize the patent.
- **Risk Management:** Develop a strategy for managing potential litigation risks associated with patent enforcement.

By integrating patent strategy into their overall business model, companies can enhance their innovation capabilities and competitive positioning.

Conclusion

In summary, a business method patent serves as a vital tool for protecting innovative business practices in today's competitive environment. Understanding the intricacies of obtaining a business method patent, along with its advantages and challenges, is essential for businesses aiming to leverage their intellectual property effectively. As the landscape of business and technology continues to evolve, staying informed about patent law and strategic patent applications remains crucial for sustained success.

Q: What is a business method patent?

A: A business method patent is a form of intellectual property protection that covers a specific method of conducting business, including processes related to finance, e-commerce, and data management.

Q: How do I know if my business method is patentable?

A: To determine patentability, your business method must be novel, non-obvious, and useful. Conducting a patent search and consulting with a patent attorney can help assess its eligibility.

Q: What are the costs associated with obtaining a business method patent?

A: Costs can vary widely but typically include attorney fees, application fees, and maintenance fees, which can total several thousand dollars over the life of the patent.

Q: Can I license my business method patent to others?

A: Yes, once granted, you can license your business method patent to other companies, creating potential revenue streams through royalties.

Q: What are the risks of holding a business method patent?

A: Risks include high litigation costs if someone infringes on your patent and the possibility of your method becoming obsolete due to rapid technological advancements.

Q: How long does a business method patent last?

A: In the United States, a business method patent typically lasts for 20 years from the date of filing, provided that maintenance fees are paid.

Q: Are business method patents enforceable?

A: Yes, business method patents are enforceable, allowing the patent holder to take legal action against unauthorized use of the patented method.

Q: What is the difference between a business method patent and a utility patent?

A: A business method patent specifically protects methods of conducting business, while a utility patent covers new inventions or functional improvements in various fields.

Q: Can foreign companies obtain business method patents in the U.S.?

A: Yes, foreign companies can apply for business method patents in the U.S. through the same application process as domestic applicants.

Q: What role does the USPTO play in business method patents?

A: The U.S. Patent and Trademark Office (USPTO) examines applications for business method patents to determine their compliance with patent laws, including novelty and non-obviousness.

business method patent: Business Method Patents Gregory A. Stobbs, 2011-10-25 In a landmark decision, the Federal Circuit Court of Appeals in *Signature Financial v. State Street Bank* held that business methods may be patented. Recently, the US Supreme Court in *Bilski v. Kappos* left the door open for the availability of patents for business methods. These holdings, together with

the explosive growth of electronic commerce and technology, make the business method patent an important growth area of intellectual property. Now in a revised Looseleaf format, this completely updated Second Edition of Business Method Patents is your guide to the unique opportunities and risks in this emerging area of intellectual property law. Business Method Patents, Second Edition is your authoritative source for expert guidance on: The landmark Supreme Court decision in *Bilski v. Kappos* USPTO view on business method patents, including an overview of BPAI rulings Mechanics of the patent application Prior art searches Drafting claims for business method or model and e-commerce inventions Drafting the complete specification Drawings required for business method patents Building a strategic patent portfolio Litigating business method patents International protection for business methods

business method patent: Business Method Patents United States. Congress. House. Committee on the Judiciary. Subcommittee on Courts, the Internet, and Intellectual Property, 2001

business method patent: *The Business Method Patent Myth* John R. Allison, Emerson H. Tiller, 2014 Although business methods previously had been patented, the Court of Appeals for the Federal Circuit first gave them formal recognition as patentable subject matter in 1998. Internet business method patents have been roundly criticized by most observers as being singularly inferior to most other patents. Many have even argued that business methods should not be patentable subject matter. As a result, Congress and the Patent and Trademark Office (PTO) singled them out for special treatment. All of these criticisms were voiced without empirical support. We gathered data on most Internet business method patents issued through the end of 1999 and compared them with a large contemporaneous data set of patents in general. We also compared them with patents in fourteen individual technology areas within the general patent data set. Our comparison focused on several metrics that we believe serve as good proxies for patent quality and value. We found that Internet business method patents appear to have been no worse than the average patent, and possibly even better than most. They also appear to have been no worse, and possibly even better than patents in most individual technology areas. These findings lead us to question the conventional wisdom that these patents were uniquely deficient. We briefly explore some possible explanations for the chasm between the accepted view and what we believe to have been the reality, including the possibility that negative opinions about these patents may have been characterized by an information cascade. More important, we believe that efforts to single out these patents for special treatment not only lacked sound justification in the particular case but also reveal more fundamental problems associated with ex ante definitions to carve out any particular technology area for different treatment.

business method patent: An Assessment of the Patentability of Business Methods in the US and European Jurisdictions and an Evaluation of the Implications Li Sun, 2013 Advances in information technology have enabled the design and development of innovations in business methods. This is particularly felt with IT enabled innovations such as Sun Microsystems' stateless shopping Cart for the web which is a Web shopping cart system that does not require any data files to be maintained on either the client or the server. Firms attempt to leverage these innovations to gain competitive advantages through cost reduction and other quality improvements, which may also pass some benefits on to consumers. However, such competitive advantages are increasingly difficult to sustain because business method innovations are often easy to copy or imitate. Quick and cheap imitation of innovative products and processes may reduce the incentives for firms to invest further in innovation. Thus, patent protection for business method inventions became a live issue with different outcomes as between the US and Europe. At present, in the US business method patents are legally recognised since the *State Street Bank* decision, 149 F. 3d 1368 (US Court of Appeals for the Federal Circuit 1998). However, the European Patent Office (EPO) still is noncommittal although some business method-related inventions have been granted de facto protection by EPO such as Hitachi Ltd's automatic trading method and apparatus (EP 567 291), the Western Union Company's method and system for performing money transfer transactions (EP 848 361) etc. John Stuart Mill (1909) said the superiority of one country over another, in a branch of

production, often arises only from having begun it sooner.¹ So it seems that the uncertainty of EPO's attitude to business method patents may result in a serious negative impact in European industry and economy. This thesis sets out to examine what precisely are the attitudes of the US and European institutions to business method patents and to explain what is the present law and how it has arisen. The author thereafter carries out an evaluation of the rationed economic and social effects of allowing / disallowing Business Method Patents and to address the question of whether Europe should adopt patent protections for business method-related inventions. To address these questions, the research focuses on the following questions: (1) under the current legal framework provided by EPC what business method-related inventions can be granted European patent? (2) whether business method -related inventions are worth protecting by the patents in Europe. To answer the latter question, the thesis not only analyses the predictable economic and social effects of allowing or alternatively disallowing business method protections generally, but we also discuss patent quality which is used by US patent economists to analyse whether business method inventions have a sufficient value to justify the granting of exclusive patent rights in return for disclosure of the inventions' specifications to the public. In analysing the predictable and likely economic and social effects of allowing or alternatively disallowing business method protections, the US position in patenting business method -related inventions needs to be considered, therefore the thesis also evaluates the US patent legal framework for business method patents and contrasts it with the European position. Through analysis of the relevant provisions and decisions, the research has concluded that under the current legal framework business method apparatus inventions are patentable in Europe if they can meet the patentability requirements of the European Patent Convention (EPC). To the effect that if a business method process invention is achieved by a technical means, solves a technical problem, or achieves a technical effect, it is often patentable in Europe provided it meets the EPC patentability requirements. However, turning to the evaluation of the economic effects of business method patents, economic analysis cannot find strong evidence to support increasing the current protections for business method patents. At the same time, the economic analysis also cannot find strong evidence to oppose present protections for business method patents. But when the US position is considered, infringement risk would favour it for it appears on balance that there may be some reason to think that Europe should adopt stronger protections for business method patents. Furthermore, the value of disclosing patented business method-related inventions' specifications seems also to show that accepting business method patents is an appropriate choice for Europe. 1 Mill, J. S., 1909. Principles of Political Economy. 7th ed. London: Longmans Green. p. 78.

business method patent: *Business Method Patents* United States. Congress. House. Committee on the Judiciary. Subcommittee on Courts, the Internet, and Intellectual Property, 2001

business method patent: Economic Analyses of the European Patent System Stefan Wagner, 2007-12-14 Research on the patent system and the analysis of patenting activities have become an important field in economics and law administration. The global demand for patent protection has been increasing strongly over the last decades. Institutional changes as well as the broadening of patentable subject matter pose new challenges to patentees and patent offices alike. Especially in Europe, the debate on the patentability of biotechnology and software-related inventions led to broad public attention to the design of the patent system. Given these developments, it is no wonder that practitioners as well as policy makers are turning to researchers for answers on how to cope with new challenges threatening the patent system. In his dissertation, Stefan Wagner attempts to answer some of these questions. Wagner applies advanced econometric methods to large-scale data sets which were assembled specifically for the purpose of this thesis. His analysis focuses on various aspects of patent filings, examination and opposition at the European Patent Office. Each of the four self-contained chapters of this book addresses different issues which are important to all stakeholders of the patent system. Wagner closely analyzes institutional features of the European Patent Office, such as the duration of the examination of patent applications, the determinants of the occurrence of patent oppositions and the patentability of business methods

under the European Patent Convention. In his concluding chapter he examines the managerial decision between outsourcing patent-related services to patent attorneys or generating them in-house.

Morgan Rosenberg and Richard Apley offer a review and analysis of all relevant case law and guidelines presented by the United States Patent and Trademark Office (USPTO). With the use of actual patents filed by the authors, this work provides practical information and guidance on the drafting of successful patent applications.

business method patent: Business Method Patents and Patent Floods Michael J. Meurer, 2014 Technological breakthroughs occasionally set off floods of inventions and associated patents. The decline of the business method exception to patentability is likely to increase the frequency of patent floods. Future technological breakthroughs might now cause two different patent floods: a flood of patents covering the relevant technology, and a flood of patents covering business methods in the new market opened by the breakthrough. Furthermore, a technological breakthrough is no longer a precondition for a patent flood. Any factor that opens a new market might cause a future flood of business method patents. A flood of related patents in a new market creates special problems for competition in addition to the usual problems that arise from market power associated with individual patents. Patent floods strain the resources of the Patent Office and adversely affect the quality of issued patents. Of particular concern, reduced patent quality increases uncertainty about the scope and validity of patents and increases the frequency of patent litigation. The fragility of the many start-ups in new markets makes them vulnerable to strategic patent litigation. Furthermore, a thicket of patents may stultify development of technology because of the cost of securing patent licenses from the large numbers of patent owners. Cross-license agreements and patent pools mitigate problems caused by floods, but such agreements could be difficult to reach in response to future business method patent floods. The heightened risk of patent floods is a problem unique to business method patents, and justifies exceptional treatment of business method inventions. It is probably socially desirable to use the subject matter and nonobviousness standards for patentability to restrict grants of business method patents.

Updated as of May 29, 2018 The United States Patent and Trademark Office (Office or USPTO) is revising the rules of practice to implement the provision of the Leahy-Smith America Invents Act (AIA) that requires the Office to issue regulations for determining whether a patent is for a technological invention in a transitional post-grant review proceeding for covered business method patents. The provision of the AIA will take effect on September 16, 2012, one year after the date of enactment. The AIA provides that this provision and any regulations issued under the provision will be repealed on September 16, 2020, with respect to any new petitions under the transitional program.
