business notions: *Intrapreneurship* Kevin C. Desouza, 2011-01-01 As an employee, you suspect that your best ideas are valuable and could greatly benefit your organization. Management also recognizes that a company's ability to compete is contingent on how well it leverages its employees' ideas. So, why are individuals at all levels of organizations typically poor advocates for ideas? *Intrapreneurship* provides an engaging guide for both managers and employees on how to direct the flow of ideas and foster a culture of entrepreneurship within their company's existing structure. Based on Kevin C. Desouza's research and experience consulting with thirty global organizations, *Intrapreneurship* outlines ways to mobilize all types of ideas – including blockbusters with the potential to create radically new external products and services, and more incremental innovations for improving internal processes. With practical frameworks and real life examples for both employees and managers, *Intrapreneurship* will help you to identify the value in your own ideas and those of others to ultimately benefit your organization.

business notions: *Latin American Insolvency Systems* Malcolm Rowat, José Astigarraga, 1999 Modern society has eliminated the inhumane debtors' prisons for handling the insolvent debtor and in their stead have enacted benign modern laws in the area of bankruptcy. Unscrupulous merchants now use these benign laws for fraudulent purposes. Based on case studies in Argentina, Brazil, Mexico, and Venezuela, this is the first publication to provide recommendations about the important legal and institutional issues that are involved in bankruptcy reform in a critical region of the global economy. The authors note that effective bankruptcy policy balances several requirements for the conduct of a stable, successful economy. For example, it might be in the greatest interests to all parties if a company is given an opportunity to restructure and make use of the scarce resources remaining in its possession. On the other hand, inefficient firms, especially those that have long survived only on state subsidies, may need to fail in order to free space in the market for more efficient, better-managed companies. Finally, there are the needs to enforce loan contracts and provide an equitable system of debt collection.

business notions: *Knowing Capitalism* Nigel Thrift, 2005-01-26 'This is an ambitious, original, and complex treatment of key aspects of contemporary capitalism. It makes a major contribution because it profoundly destabilizes the scholarship on globalization, the so-called new economy, information technology, distinct contemporary business cultures and practices' - Saskia Sassen, author of *Globalization and its Discontents* 'Nigel Thrift offers us the sort of cultural analysis of global capitalism that has long been needed - one that emphasizes the innovative energy of global capitalism. The book avoids stale denouncements and offers instead a view of capitalism as a form of practice' - Karin Knorr Cetina, Professor of Sociology, University of Konstanz, Germany Capitalism is well known for producing a form of existence where 'everything solid melts into air'. But what happens when capitalism develops theories about itself? Are we moving into a condition in which capitalism can be said to possess a brain? These questions are pursued in this sparkling and thought-provoking book. Thrift looks at what he calls 'the cultural circuit of capitalism', the mechanism for generating new theories of capitalism. The book traces the rise of this circuit back to the 1960s when a series of institutions locked together to interrogate capitalism, to the present day, when these institutions are moving out to the Pacific basin and beyond. What have these theories produced? How have they been implicated in the speculative bubbles that characterized the late twentieth century? What part have they played in developing our understanding of human relations? Building on an inter-disciplinary approach which embraces the core social sciences, Thrift outlines an exciting new theory for understanding capitalism. His book is of interest to readers in geography, social theory, anthropology and cultural economics.

business notions: Theory and Engineering of Complex Systems and Dependability

Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2015-06-14 Building upon a long tradition of scientific conferences dealing with problems of reliability in technical systems, in 2006 Department of Computer Engineering at Wrocław University of Technology established DepCoS-RELCOMEX series of events in order to promote a comprehensive approach to evaluation of system performability which is now commonly called dependability. Contemporary complex systems integrate variety of technical, information, software and human (users, administrators and management) resources. Their complexity comes not only from involved technical and organizational structures but mainly from complexity of information processes that must be implemented in specific operational environment (data processing, monitoring, management, etc.). In such a case traditional methods of reliability evaluation focused mainly on technical levels are insufficient and more innovative, multidisciplinary methods of dependability analysis must be applied. Selection of submissions for these proceedings exemplify diversity of topics that must be included in such analyses: tools, methodologies and standards for modelling, design and simulation of the systems, security and confidentiality in information processing, specific issues of heterogeneous, today often wireless, computer networks, or management of transportation networks. In addition, this edition of the conference hosted the 5th CrISS-DESSERT Workshop devoted to the problems of security and safety in critical information systems.
