

business process manager ibm

business process manager ibm is a critical tool for organizations looking to optimize their operational efficiency and streamline their workflows. As businesses increasingly rely on technology to manage their processes, IBM's Business Process Manager (BPM) emerges as a powerful solution that facilitates process design, execution, and monitoring. This article will delve into the features, benefits, and implementation strategies of IBM BPM, providing a comprehensive overview for professionals seeking to enhance their business operations. Key topics will include an introduction to IBM BPM, its core features, the advantages of implementing such a system, best practices for deployment, and real-world case studies.

- Introduction to IBM Business Process Manager
- Core Features of IBM BPM
- Advantages of Implementing IBM BPM
- Best Practices for IBM BPM Deployment
- Real-World Case Studies
- Future of Business Process Management with IBM

Introduction to IBM Business Process Manager

IBM Business Process Manager is a comprehensive business process management solution that enables organizations to model, execute, and monitor business processes. It provides tools that support the entire lifecycle of process management, from design and execution to optimization. With IBM BPM, businesses can automate workflows, improve visibility into operations, and enhance collaboration among teams.

The platform is designed to cater to organizations of various sizes and industries, offering a scalable solution that can adapt to changing business needs. Key components of IBM BPM include process modeling tools, a process engine, and analytics capabilities that allow businesses to gain insights into their performance. This article will explore these features in detail, along with the benefits they bring to organizations.

Core Features of IBM BPM

IBM BPM comprises a suite of features that facilitate effective process management. Understanding these features is essential for organizations looking to leverage the platform for enhanced operational efficiency.

Process Modeling

IBM BPM provides a user-friendly interface for designing business processes. Users can create visual models that map out workflows, define roles, and specify tasks. The modeling tools support both technical and non-technical users, making it easier for teams to collaborate on process design.

Integration Capabilities

One of the standout features of IBM BPM is its ability to integrate with various systems and applications. Whether it's CRM, ERP, or other enterprise solutions, IBM BPM can connect seamlessly to ensure data flows smoothly across the organization.

Real-Time Monitoring and Analytics

IBM BPM includes powerful analytics tools that provide real-time insights into process performance. Organizations can track key performance indicators (KPIs), identify bottlenecks, and make data-driven decisions to optimize their operations.

Advantages of Implementing IBM BPM

Implementing IBM BPM can yield significant advantages for organizations. Here are some key benefits that underscore its value:

- **Increased Efficiency:** By automating repetitive tasks and streamlining workflows, IBM BPM helps reduce manual errors and improve overall productivity.
- **Enhanced Visibility:** The real-time monitoring capabilities allow managers to gain insights into process performance and make informed decisions swiftly.
- **Improved Collaboration:** With a centralized platform for process management, teams can collaborate effectively, ensuring that everyone is on the same page.
- **Scalability:** IBM BPM can scale with the organization, accommodating growth and changes in business processes without significant additional investment.
- **Regulatory Compliance:** The platform can help organizations adhere to industry regulations by providing documentation and audit trails for processes.

Best Practices for IBM BPM Deployment

To maximize the benefits of IBM BPM, organizations should follow best practices during deployment. Here are several recommendations to ensure a successful implementation:

Define Clear Objectives

Before deploying IBM BPM, organizations should define clear objectives for what they want to achieve. Whether it's increasing efficiency, reducing costs, or improving customer service, having specific goals will guide the implementation process.

Engage Stakeholders Early

Involving stakeholders from various departments early in the process can provide valuable insights and foster buy-in for the new system. This collaboration helps ensure that the BPM solution aligns with the needs of all users.

Invest in Training

Training is essential to ensure that users are comfortable with the new system. Providing comprehensive training sessions and resources will help users maximize the potential of IBM BPM, leading to higher adoption rates.

Real-World Case Studies

Examining real-world implementations of IBM BPM can provide valuable insights into its capabilities and benefits. Various organizations across industries have successfully leveraged IBM BPM to enhance their operations.

Case Study: Financial Services

A leading financial services provider implemented IBM BPM to streamline its loan application process. By automating data collection and approval workflows, the organization reduced processing times by 30% and improved customer satisfaction significantly.

Case Study: Healthcare

A healthcare organization used IBM BPM to manage patient admissions and discharge processes. The result was a more efficient workflow that reduced wait times and improved patient throughput, ultimately enhancing the quality of care.

Future of Business Process Management with IBM

The landscape of business process management is continually evolving, and IBM is at the forefront of these changes. The integration of artificial intelligence (AI) and machine learning (ML) into BPM solutions is becoming increasingly common, allowing organizations to automate decision-making and predict process outcomes.

Moreover, as businesses continue to embrace digital transformation, IBM BPM will likely incorporate more cloud-based features, providing flexibility and scalability to meet the demands of modern enterprises. Organizations that invest in IBM BPM today will position themselves for success in an increasingly competitive marketplace.

Q: What is IBM Business Process Manager?

A: IBM Business Process Manager is a comprehensive solution designed to optimize and manage business processes through automation, real-time monitoring, and analytics capabilities, aiding organizations in improving operational efficiency.

Q: What are the key features of IBM BPM?

A: Key features of IBM BPM include process modeling tools, integration capabilities with other systems, real-time monitoring and analytics, and a user-friendly interface that supports collaboration across teams.

Q: How can IBM BPM improve business efficiency?

A: IBM BPM improves business efficiency by automating repetitive tasks, streamlining workflows, reducing manual errors, and providing insights into process performance for informed decision-making.

Q: What industries can benefit from IBM BPM?

A: IBM BPM can benefit various industries, including finance, healthcare, manufacturing, retail, and more, as it provides solutions to streamline processes and enhance operational efficiency across sectors.

Q: What are best practices for implementing IBM BPM?

A: Best practices for implementing IBM BPM include defining clear objectives, engaging stakeholders early, investing in user training, and continuously monitoring process performance for optimization.

Q: Can IBM BPM integrate with other software solutions?

A: Yes, IBM BPM is designed to integrate seamlessly with various software solutions, including CRM, ERP, and other enterprise applications, facilitating smooth data flow across the organization.

Q: What is the future of business process management?

A: The future of business process management includes the integration of AI and machine learning, cloud-based solutions for enhanced scalability, and continued emphasis on automation to improve efficiency and decision-making.

Q: How does IBM BPM help with regulatory compliance?

A: IBM BPM helps organizations maintain regulatory compliance by providing comprehensive documentation, audit trails, and automated processes that adhere to industry regulations.

Q: What are the benefits of real-time monitoring in IBM BPM?

A: Real-time monitoring in IBM BPM provides organizations with immediate insights into process performance, enabling quick identification of bottlenecks and facilitating timely adjustments to improve efficiency.

Q: How does IBM BPM support collaboration among teams?

A: IBM BPM supports collaboration among teams through a centralized platform that allows users to collaborate on process design, share insights, and ensure everyone is aligned on workflows and objectives.

business process manager ibm: *Business Process Management Design Guide: Using IBM Business Process Manager* Dr. Ali Arsanjani, Nakul Bharade, Magnus Borgenstrand, Philipp Schume, J. Keith Wood, Vyacheslav Zheltonogov, IBM Redbooks, 2015-04-27 IBM® Business Process Manager (IBM BPM) is a comprehensive business process management (BPM) suite that provides visibility and management of your business processes. IBM BPM supports the whole BPM lifecycle approach: Discover and document Plan Implement Deploy Manage Optimize Process owners and business owners can use this solution to engage directly in the improvement of their business processes. IBM BPM excels in integrating role-based process design, and provides a social BPM experience. It enables asset sharing and creating versions through its Process Center. The Process

Center acts as a unified repository, making it possible to manage changes to the business processes with confidence. IBM BPM supports a wide range of standards for process modeling and exchange. Built-in analytics and search capabilities help to further improve and optimize the business processes. This IBM Redbooks® publication provides valuable information for project teams and business people that are involved in projects using IBM BPM. It describes the important design decisions that you face as a team. These decisions invariably have an effect on the success of your project. These decisions range from the more business-centric decisions, such as which should be your first process, to the more technical decisions, such as solution analysis and architectural considerations.

business process manager ibm: *IBM Business Process Manager V8.5 Performance Tuning and Best Practices* Mike Collins, Zi Hui Duan, Andreas Fried, Ben Hoflich, Chris Richardson, Torsten Wilms, IBM Redbooks, 2015-02-24 This IBM® Redbooks® publication provides performance tuning tips and best practices for IBM Business Process Manager (IBM BPM) V8.5.5 (all editions) and IBM Business Monitor V8.5.5. These products represent an integrated development and runtime environment based on a key set of service-oriented architecture (SOA) and business process management (BPM) technologies. Such technologies include Service Component Architecture (SCA), Service Data Object (SDO), Business Process Execution Language (BPEL) for web services, and Business Processing Modeling Notation (BPMN). Both IBM Business Process Manager and Business Monitor build on the core capabilities of the IBM WebSphere® Application Server infrastructure. As a result, Business Process Manager solutions benefit from tuning, configuration, and best practices information for WebSphere Application Server and the corresponding platform Java virtual machines (JVMs). This book targets a wide variety of groups, both within IBM (development, services, technical sales, and others) and customers. For customers who are either considering or are in the early stages of implementing a solution incorporating Business Process Manager and Business Monitor, this document proves a useful reference. The book is useful both in terms of best practices during application development and deployment and as a reference for setup, tuning, and configuration information. This book talks about many issues that can influence performance of each product and can serve as a guide for making rational first choices in terms of configuration and performance settings. Similarly, customers who already implemented a solution with these products can use the information presented here to gain insight into how their overall integrated solution performance can be improved.

business process manager ibm: *IBM Business Process Manager Operations Guide* Bryan Brown, Karri S Carlson-Neumann, Mark Filley, Weiming Gu, Chris Richardson, Dave Spriet, Shuo Zhang, IBM Redbooks, 2016-12-16 This IBM® Redbooks® publication provides operations teams with architectural design patterns and guidelines for the day-to-day challenges that they face when managing their IBM Business Process Manager (BPM) infrastructure. Today, IBM BPM L2 and L3 Support and SWAT teams are constantly advising customers how to deal with the following common challenges: Deployment options (on-premises, patterns, cloud, and so on) Administration DevOps Automation Performance monitoring and tuning Infrastructure management Scalability High Availability and Data Recovery Federation This publication enables customers to become self-sufficient, promote consistency and accelerate IBM BPM Support engagements. This IBM Redbooks publication is targeted toward technical professionals (technical support staff, IT Architects, and IT Specialists) who are responsible for meeting day-to-day challenges that they face when they are managing an IBM BPM infrastructure.

business process manager ibm: *Business Process Management Design Guide* Vyacheslav Zheltonogov, J. business process manager ibm: Extending IBM Business Process Manager to the Mobile Enterprise with IBM Worklight Ahmed Abdel-Hamid, Scott Andrews, Ali Arsanjani, Hala Aziz, Owen Cline, Jorge Gonzalez-Orozco, Chris Hockings, Tony Kambourakis, Steve Mirman, IBM Redbooks, 2015-02-13 In today's business in motion environments, workers expect to be connected to their critical business processes while on-the-go. It is imperative to deliver more meaningful user engagements by extending business processes to the mobile working environments. This IBM® Redbooks® publication provides an overview of the market forces that push organizations to reinvent their process with Mobile in mind. It describes IBM Mobile Smarter Process and explains how the capabilities provided by the offering help organizations to mobile-enable their processes. This book outlines an approach that organizations can use to identify where within the organization mobile technologies can offer the greatest benefits. It provides a high-level overview of the IBM Business Process Manager and IBM Worklight® features that can be leveraged to mobile-enable processes and accelerate the adoption of mobile technologies, improving time-to-value. Key IBM Worklight and IBM Business Process Manager capabilities are showcased in the examples included in this book. The examples show how to integrate with IBM Bluemix™ as the platform to implement various supporting processes. This IBM Redbooks publication discusses architectural patterns for exposing business processes to mobile environments. It includes an overview of the IBM MobileFirst reference architecture and deployment considerations. Through use cases and usage scenarios, this book explains how to build and deliver a business process using IBM Business Process Manager and how to develop a mobile app that enables remote users to interact with the business process while on-the-go, using the IBM Worklight Platform. The target audience for this book consists of solution architects, developers, and technical consultants who will learn the following information: What is IBM Mobile Smarter Process Patterns and benefits of a mobile-enabled Smarter Process IBM BPM features to mobile-enable processes IBM Worklight features to mobile-enable processes Mobile architecture and deployment topology IBM BPM interaction patterns Enterprise mobile security with IBM Security Access Manager and IBM Worklight Implementing mobile apps to mobile-enabled business processes

business process manager ibm: IBM Business Process Manager V8.5 Performance Tuning and Best Practices Torsten Wilms, Chris Richardson, Ben Hoflich, Andreas Fried, Zi Duan, Mike Collins, 2015 This IBM® Redbooks® publication provides performance tuning tips and best practices for IBM Business Process Manager (IBM BPM) V8.5.5 (all editions) and IBM Business Monitor V8.5.5. These products represent an integrated development and runtime environment based on a key set of service-oriented architecture (SOA) and business process management (BPM) technologies. Such technologies include Service Component Architecture (SCA), Service Data Object (SDO), Business Process Execution Language (BPEL) for web services, and Business Processing Modeling Notation (BPMN). Both IBM Business Process Manager and Business Monitor build on the core capabilities of the IBM WebSphere® Application Server infrastructure. As a result, Business Process Manager solutions benefit from tuning, configuration, and best practices information for WebSphere Application Server and the corresponding platform Java virtual machines (JVMs). This book targets a wide variety of groups, both within IBM (development, services, technical sales, and others) and customers. For customers who are either considering or are in the early stages of

implementing a solution incorporating Business Process Manager and Business Monitor, this document proves a useful reference. The book is useful both in terms of best practices during application development and deployment and as a reference for setup, tuning, and configuration information. This book talks about many issues that can influence performance of each product and can serve as a guide for making rational first choices in terms of configuration and performance settings. Similarly, customers who already implemented a solution with these products can use the information presented here to gain insight into how their overall integrated solution performance can be improved.

business process manager ibm: Working with IBM Business Process Manager on Cloud for Basic Daily Operations Karri S Carlson-Neumann, IBM Redbooks, 2016-11-22 IBM® Business Process Manager on Cloud is an IBM subscription-based software as a service (SaaS) solution for IBM Business Process Manager (BPM) capabilities. BPM on Cloud provides secure and scalable operating environments that allow for development, testing, and execution of BPM projects. As a BPM on Cloud customer, you will work with the IBM BPM on Cloud team to achieve your goals. This IBM Redbooks® Solution Guide enhances your awareness that some common operational activities include responsibilities from you as well as from the IBM BPM on Cloud team. This guide focuses primarily on the activities surrounding the BPM on Cloud (Management) portal and service requests for product support.

business process manager ibm: IBM Business Process Manager Operations Guide Bryan Brown, Karri S. Carlson-Neumann, Mark Filley, Weiming Gu, Chris Richardson, Dave Spriet, Shuo Zhang, 2016

business process manager ibm: IBM Business Process Manager Version 8.0 Production Topologies Dawn Ahukanna, Victor Paulo Alves de Almeida, Vasfi Gucer, Shishir Narain, Bobby Pham, Mohamed Salem, Matthias Warkentin, J. Keith Wood, Zhi Qiu Xie, Cheng Zhang, IBM Redbooks, 2013-07-22 This IBM® Redbooks® publication describes how to build production topologies for IBM Business Process Manager V8.0. This book is an update of the existing book IBM Business Process Manager V7.5 Production Topologies, SG24-7976. It is intended for IT Architects and IT Specialists who want to understand and implement these topologies. Use this book to select the appropriate production topologies for an environment, then follow the step-by-step instructions to build those topologies. Part 1 introduces IBM Business Process Manager and provides an overview of basic topology components, and Process Server and Process Center. This part also provides an overview of the production topologies described in this book, including a selection criteria for when to select a topology. IBM Business Process Manager security and the presentation layer are also addressed in this part. Part 2 provides a series of step-by-step instructions for creating production topology environments by using deployment environment patterns. This process includes topologies that incorporate IBM Business Monitor. This part also describes advanced topology topics. Part 3 covers post installation instructions for implementing production topology environments such as configuring IBM Business Process Manager to use IBM HTTP Server and WebSphere® proxy server.

business process manager ibm: *WebSphere Business Process Management and WebSphere Enterprise Service Bus V7 Performance Tuning* IBM Business Process Management Performance teams, IBM Redbooks, 2010-04-30 This IBM® Redpaper™ publication was produced by the WebSphere® Business Process Management performance teams. It provides performance tuning tips and best practices for WebSphere Process Server 7.0.0.1, WebSphere Enterprise Service Bus 7.0.0.1, WebSphere Integration Developer 7.0.0.1, WebSphere Business Monitor 7.0.0.0, and WebSphere Business Modeler 7.0.0.1. These products represent an integrated development and runtime environment based on a key set of service-oriented architecture (SOA) and business process management (BPM) technologies: Service Component Architecture (SCA), Service Data Object (SDO), and Business Process Execution Language for Web Services (BPEL). This paper is aimed at a wide variety of groups, both within IBM (development, services, technical sales, and so forth) and by customers. For those who are either considering or are in the early stages of implementing a

solution incorporating these products, this document should prove a useful reference, both in terms of best practices during application development and deployment, and as a reference for setup, tuning, and configuration information. This paper provides a useful introduction to many of the issues influencing each product's performance, and can serve as a guide for making rational first choices in terms of configuration and performance settings. Similarly, those who have already implemented a solution using these products might use the information presented here to gain insight as to how their overall integrated solution performance might be improved. All of these products build on the core capabilities of the WebSphere Application Server infrastructure, so BPM solutions also benefit from tuning, configuration, and best practices information for WebSphere Application Server and the corresponding platform Java™ Virtual Machines (JVMs). Pointers to this information can be found in Related publications on page 67. The reader is encouraged to use this paper in conjunction with these references..

business process manager ibm: IBM Business Process Manager V7.5 Production Topologies Dawn Ahukanna, Bryan Brown, Karri Carlson-Neumann, Hua Cheng, Haroldo R. J. de Macedo, Christopher Rühl, IBM Redbooks, 2011-10-28 This IBM® Redbooks® publication describes how to build production topologies for IBM Business Process Manager Advanced V7.5. It is aimed at IT Architects and IT Specialists who want to understand and implement these topologies. Use this book to select the appropriate production topologies for a given environment, then follow the step-by-step instructions included in this book to build these topologies. Part one introduces IBM Business Process Manager and provides an overview of basic topology components, and Process Server and Process Center. This part also provides an overview of the production topologies that we describe in this book, including a selection criteria for when to select a given topology. Part two provides a series of step-by-step instructions for creating production topology environments using deployment environment patterns. This includes topologies that incorporate IBM Business Monitor. This part also discusses advanced topology topics.

business process manager ibm: IBM Business Process Manager V7.5 Performance Tuning and Best Practices IBM Business Process Management Performance Team, IBM Redbooks, 2012-04-11 This IBM® Redpaper™ publication provides performance tuning tips and best practices for IBM Business Process Manager (BPM) V7.5 (all editions) and IBM Business Monitor V7.5. These products represent an integrated development and runtime environment based on a key set of service-oriented architecture (SOA) and business process management technologies. Such technologies include Service Component Architecture (SCA), Service Data Object (SDO), Business Process Execution Language for Web services (BPEL), and Business Processing Modeling Notation (BPMN). Both BPM and Business Monitor build on the core capabilities of the IBM WebSphere® Application Server infrastructure. As a result, BPM solutions benefit from tuning, configuration, and best practices information for WebSphere Application Server and the corresponding platform Java Virtual Machines (JVMs). This paper targets a wide variety of groups, both within IBM (development, services, technical sales, and others) and customers. For customers who are either considering or are in the early stages of implementing a solution incorporating BPM and Business Monitor, this document proves a useful reference. The paper is useful both in terms of best practices during application development and deployment and as a reference for setup, tuning, and configuration information. This paper introduces many of the issues influencing the performance of each product and can serve as a guide for making rational first choices in terms of configuration and performance settings. Similarly, customers who have already implemented a solution using these products might use the information presented here to gain insight into how their overall integrated solution performance might be improved.

business process manager ibm: Empowering your Ad Hoc Business with IBM Business Process Manager Lisa Dyer, Franclim Bento, Stuart Jones, Stu Leibowitz, Jared Michalec, IBM Redbooks, 2013-06-04 In the context of daily business, ad hoc processes are those activities and events that occur within an organization's operations that typically are undocumented or unmonitored. At times, these ad hoc processes can seem chaotic and unpredictable. In many cases,

these off the platform processes represent an opportunity for you to realize visibility into your organization operations. By taking advantage of the benefits of business process management (BPM) and IBM® Business Process Manager solutions, you can bring order and stability to these business processes and improve the organization's agility in order to stay adaptive and competitive. This IBM Redpaper™ publication presents examples and a case study that illustrate how having a choice of where on the ad hoc spectrum you operate your business is both necessary and vital to producing better outcomes and achieving agility. You need agility to stay relevant and to survive. The intent of the prescriptive framework in this paper is to give you the confidence and motivation to choose how much business agility you want and to begin achieving it. This paper is intended for Executive Sponsors, Team Leaders, Lead Architects, and anyone interested in adding business agility and ad hoc processes to their enterprise.

business process manager ibm: *IBM Business Process Management Enhanced by IBM Coach Framework* Margaret Ticknor, IBM Redbooks, 2016-09-07 This IBM® Redbooks® Solution Guide describes how the IBM Business Process Management (IBM BPM) solutions can help your organization run efficiently by streamlining and automating your processes. The IBM Coach Framework is a key element of the IBM BPM platform. Process authors use the IBM Coach Framework to create and maintain custom web-based user interfaces (UIs) that are embedded within their business process solutions. Having custom UIs is crucial to successful deployment of a business process solution.

business process manager ibm: *Business Process Management Deployment Guide* Uday Pillai, 2014 This IBM Redbooks publication provides an introduction to designing and building IBM Business Process Manager V8.5 environments. The target audience for this book includes IT architects, IT specialists, and consultants who are seeking to understand and implement IBM BPM environments. This book introduces the changes and new features in IBM Business Process Manager V8.5 and provides an overview of the basic topology and components. Detailed and step-by-step instructions to prepare, build, and verify your environment, including proxy server configuration, also are described. The book also provides an overview of a consolidated migration approach that was introduced in V8.5. It describes tools and utilities that are available for migrating from the previous version of the product to V8.5. Two step-by-step migration scenarios are described to help you better understand the detailed migration activities that are required for IBM BPM Standard and Advanced.--

business process manager ibm: *Scaling BPM Adoption: From Project to Program with IBM Business Process Manager* Lisa Dyer, Flournoy Henry, Ines Lehmann, Guy Lipof, Fahad Osmani, Dennis Parrott, Wim Peeters, Jonas Zahn, IBM Redbooks, 2012-10-04 Your first Business Process Management (BPM) project is a crucial first step on your BPM journey. It is important to begin this journey with a philosophy of change that allows you to avoid common pitfalls that lead to failed BPM projects, and ultimately, poor BPM adoption. This IBM® Redbooks® publication describes the methodology and best practices that lead to a successful project and how to use that success to scale to enterprise-wide BPM adoption. This updated edition contains a new chapter on planning a BPM project. The intended audience for this book includes all people who participate in the discovery, planning, delivery, deployment, and continuous improvement activities for a business process. These roles include process owners, process participants, subject matter experts (SMEs) from the operational business, and technologists responsible for delivery, including BPM analysts, BPM solution architects, BPM administrators, and BPM developers.

business process manager ibm: Extending IBM Business Process Manager to the Mobile Enterprise with IBM Worklight Ahmed Abdel-Hamid, 2015 This book provides an overview of the market forces that push organizations to reinvent their process with Mobile in mind. It describes IBM Mobile Smarter Process and explains how the capabilities provided by the offering help organizations to mobile-enable their processes. It outlines an approach that organizations can use to identify where within the organization mobile technologies can offer the greatest benefits. It provides a high-level overview of the IBM Business Process Manager and IBM Worklight features

that can be leveraged to mobile-enable processes and accelerate the adoption of mobile technologies, improving time-to-value. Key IBM Worklight and IBM Business Process Manager capabilities are showcased along with examples that show how to integrate with IBM Bluemix as the platform to implement various supporting processes. --

business process manager ibm: IBM Business Process Manager Version 8.0 Production Topologies Dawn Ahukanna, Victor De Almeida, Vasfi Gucer, Shishir Narain, Bobby Pham, Mohamed Salem, Matthias Warkentin, J. Wood, Zhi Xie, Cheng Zhang, 2013 This IBM® Redbooks® publication describes how to build production topologies for IBM Business Process Manager V8.0. This book is an update of the existing book IBM Business Process Manager V7.5 Production Topologies, SG24-7976. It is intended for IT Architects and IT Specialists who want to understand and implement these topologies. Use this book to select the appropriate production topologies for an environment, then follow the step-by-step instructions to build those topologies. Part 1 introduces IBM Business Process Manager and provides an overview of basic topology components, and Process Server and Process Center. This part also provides an overview of the production topologies described in this book, including a selection criteria for when to select a topology. IBM Business Process Manager security and the presentation layer are also addressed in this part. Part 2 provides a series of step-by-step instructions for creating production topology environments by using deployment environment patterns. This process includes topologies that incorporate IBM Business Monitor. This part also describes advanced topology topics. Part 3 covers post installation instructions for implementing production topology environments such as configuring IBM Business Process Manager to use IBM HTTP Server and WebSphere® proxy server. Please note that the additional material referenced in the text is not available from IBM.

business process manager ibm: Deliver Modern UI for IBM BPM with the Coach Framework and Other Approaches Rackley Boren, Eric Ducos, Ge Gao, Thalia Hooker, Matthew Oatts, Paul Pacholski, Dennis Parrott, Claudio Tagliabue, IBM Redbooks, 2017-05-08 IBM® Coach Framework is a key component of the IBM Business Process Manager (BPM) platform that enables custom user interfaces to be easily embedded within business process solutions. Developer tools enable process authors to rapidly create a compelling user experience (UI) that can be delivered to desktop and mobile devices. IBM Process Portal, used by business operations to access, execute, and manage tasks, is entirely coach-based and can easily be configured and styled. A corporate look and feel can be defined using a graphical theme editor and applied consistently across all process applications. The process federation capability enables business users to access and execute all their tasks using a single UI without being aware of the implementation or origin. Using Coach Framework, you can embed coach-based UI in other web applications, develop BPM UI using alternative UI technology, and create mobile applications for off-line working. This IBM Redbooks® publication explains how to fully benefit from the power of the Coach Framework. It focuses on the capabilities that Coach Framework delivers with IBM BPM version 8.5.7. The content of this document, though, is also pertinent to future versions of the application.

business process manager ibm: IBM Business Process Manager Security: Concepts and Guidance J Keith Wood, Jens Engelke, IBM Redbooks, 2012-09-18 This IBM® Redbooks® publication provides information about security concerning an organization's business process management (BPM) program, about common security holes that often occur in this field, and describes techniques for rectifying these holes. This book documents preferred practices and common security hardening exercises that you can use to achieve a reasonably well-secured BPM installation. Many of the practices described in this book apply equally to generic Java Platform and Enterprise Edition (J2EE) applications, as well as to BPM. However, it focuses on aspects that typically do not receive adequate consideration in actual practice. Also, it addresses equally the BPM Standard and BPM Advanced Editions, although there are topics inherent in BPM Advanced that we considered to be out of scope for this book. This book is not meant as a technical deep-dive into any one topic, technology, or philosophy. IBM offers a variety of training and consulting services that can help you to understand and evaluate the implications of this book's topic in your own

organization.
