Overview of Columbia University Business Analytics Master

The Columbia University Business Analytics Master is a program offered through the renowned Columbia Business School. It is designed to prepare students to analyze data and use it to make strategic business decisions. The program emphasizes a blend of technical skills in data science and business strategy, making it unique among similar offerings in other institutions.

Students in this program will engage with a diverse curriculum that incorporates various aspects of analytics, including data management, statistical modeling, and machine learning. The program is structured to allow students to develop a strong foundation in both theoretical and practical applications of business analytics.

Additionally, the program offers flexibility in its delivery format, catering to both full-time students and working professionals. This flexibility allows individuals to balance their studies with personal and professional commitments effectively.

Curriculum Details

The curriculum of the Columbia University Business Analytics Master is designed to provide a comprehensive education in business analytics. It covers a wide range of topics that are critical for success in the field.

Core Courses

The core courses of the program focus on essential areas of business analytics. Some of the key courses include:

- Data Analysis and Visualization
- Predictive Analytics
- Machine Learning for Business
- Data Management and Big Data Technologies
- Business Strategy and Analytics

These courses are designed to build a strong analytical foundation, enabling students to understand and manipulate data effectively.
