constellation business park: Transforming Asian Economy and Business Administration Katsuhiko Hirasawa, Tsuyako Nakamura, Yutaka Takakubo, 2022-06-10 Are there any countries now days that do not use products and parts made in Asia? In this sense Asia is a production base that supports the world economy. The entry of multinational corporations into Asian countries has been carried out from early on. But, it was the collapse of the socialist planned economy that clinched the expansion of MNEs into Asia. The collapse of the socialist planned economy was accompanied by the introduction of the market economy in the countries with the socialist planned economy. The ideology of neo-liberalism, with emphasis on the market economy, became the principle for the reconstruction of these countries. Against the backdrop of this global standard, the activities of MNEs in Asian countries have advanced. Accompanying this, the construction of an economic structure based on the MNEs has progressed there. This is the emergence of so-called Asian capitalism. However, the spread of COVID-19 and its countermeasures appear to be transforming this global order. As is well known, the spread of COVID-19 and its countermeasures are suppressing international human exchanges and logistics advanced by globalization and promoting the restructuring of local economies. In this context, the way of business activities in Asian countries probably defines the future world order. Based on this awareness of the issues, this book deals with various problems of the economy and business management, especially human resources, in Asian countries.

constellation business park: Sustainable Management Georg Müller-Christ, 2011-06-17 In this book, a resource-oriented perception of sustainable management is presented. Firms that decide to act more sustainable have to bear in mind that they do not only need resources for economic activities today, but that they will need these tomorrow as well. This leads to contradictory management rationalities firms must deal with. The author presents his findings as regards the

development of environmental and social responsibility and introduces a theory of management ecology. He takes a close look at the contradictions businesses have to face when governing their activity towards sustainability. Moreover, he identifies different notions of the resource term in management studies and develops a “sustainable resource management” which could help businesses redirect their economic activities from a solely profit-oriented to a resource-oriented way of operating.

constellation business park: *Living and Working Dogma*, 2022-05-24 An argument against the ideology of domesticity that separates work from home; lavishly illustrated, with architectural proposals for alternate approaches to working and living. Despite the increasing numbers of people who now work from home, in the popular imagination the home is still understood as the sanctuary of privacy and intimacy. Living is conceptually and definitively separated from work. This book argues against such a separation, countering the prevailing ideology of domesticity with a series of architectural projects that illustrate alternative approaches. Less a monograph than a treatise, richly illustrated, the book combines historical research and design proposals to reenvision home as a cooperative structure in which it is possible to live and work and in which labor is socialized beyond the family—freeing inhabitants from the sense of property and the burden of domestic labor. The projects aim to move the house beyond the dichotomous logic of male/female, husband/wife, breadwinner/housewife, and private/public. They include the reinvention of single-room occupancy as a new model for affordable housing; the reimagining of the simple tower-and-plinth prototype as host to a multiplicity of work activities and enlivening street life; and a plan for a modular, adaptable structure meant to house a temporary dweller. All of these design projects conceive of the house not as a commodity, the form of which is determined by its exchange value, but as an infrastructure defined by its use value.

constellation business park: Sustainable Electricity Jessica Fox, 2016-04-03 This resource is the first-ever compilation of industry-authored case studies on how power companies are making strides toward achieving sustainable electricity in North America. The book features recent game changing efforts, candid insider stories about challenges and process, and forecasts for the next decade of innovation. Each chapter shares topic-focused case studies regarding the reality of implementing operational changes and strategies that will lead to sustainable electricity. Key technical staff and managers from top companies candidly report on failures, insights, trade-offs, internal process, resulting improvements to operational efficiencies, and natural resource and stakeholder benefits. Electric power company managers seeking to identify specific opportunities and understand the process for advancing sustainability in their own organizations will discover solid paths forward through potentially treacherous terrain. Educated stakeholders, agencies, and regulators will benefit from the greater understanding of the reality of realizing change in the electric power industry engendered by this unique strategic resource.

constellation business park: Linking Government Data David Wood, 2011-11-12 Linking Government Data provides a practical approach to addressing common information management issues. The approaches taken are based on international standards of the World Wide Web Consortium. Linking Government Data gives both the costs and benefits of using linked data techniques with government data; describes how agencies can fulfill their missions with less cost; and recommends how intra-agency culture must change to allow public presentation of linked data. Case studies from early adopters of linked data approaches in international governments are presented in the last section of the book. Linking Government Data is designed as a professional book for those working in Semantic Web research and standards development, and for early adopters of Semantic Web standards and techniques. Enterprise architects, project managers and application developers in commercial, not-for-profit and government organizations concerned with scalability, flexibility and robustness of information management systems will also find this book valuable. Students focused on computer science and business management will also find value in

this book.

constellation business park: Sustainable Development Goals and Sustainable Supply Chains in the Post-global Economy Natalia Yakovleva, Regina Frei, Sudhir Rama Murthy, 2019-05-21 This book presents a collection of studies on current best practices for delivering sustainable development policies within supply chains. It critiques the limitations of existing business theory and practice on sustainable supply chain management, and discusses opportunities for new conceptual models for businesses to engage with Sustainable Development Goals (SDGs). It examines how businesses can work towards implementing Sustainable Development Goals in the contexts of entrepreneurial initiative, industry collaboration and regional development. SDGs renew the sustainable development agenda for global communities and ask businesses and organisations to reset their sustainable development policies. A strategy to embed sustainable development principles into business operations along the supply chain operations, which has been a conceptual and, in many instances, practitioner, business and industry achievement of the past decades, is not enough to shift the economic and social conditions of poor populations around the world. How would the global supply chains of the future look like? What social relations does it envisage? How will businesses and organisations engage with societies, environments and complex institutional contexts in emerging markets and developing countries, which are faced with issues of population growth, needed leaps in infrastructure provision, educational and health improvements, cultural and institutional shifts? The book challenges current approaches to sustainable supply chain practices guided by discussion on SDGs. It reviews implementation issues of existing sustainable development approaches, assesses the advancement of sustainable development strategies and examines the opportunities for global value chains to increase their positive social and environmental inputs in regions, communities and organisations. The book collects both conceptual and empirical studies set in a variety of business and organisational contexts, such as manufacturing, retail, procurement, cities and industrial parks. It contests the accepted axioms of sustainable practices in the global supply chains and proposes new models for organisations and production networks to engage with societies and address market and production effects on communities and institutions.

constellation business park: Greetings from the Lincoln Highway Brian Butko, 2019-05-31

The Lincoln Highway was the first continuous road to connect the coasts, allowing newly motorized Americans to cross the country by car. This book allows readers to travel across 100 years of the highway, from New York City to San Francisco, with stops at historic landmarks, bridges, taverns, movie palaces, diners, gas stations, ice cream stands, tourist cabins, and roadside attractions. Color maps and stories of the highway take readers through 14 states, with excerpts from memoirs and old postcards giving a feel for what early motoring was like--the good, the bad, and the muddy. The book is organized by state, with narrative information on what the original Lincoln Highway crossed through. There are historical tidbits and nostalgic details, along with information on what remains. This book is a useful treasure for travel planning and armchair reading.

constellation business park: Assembling the Centre: Architecture for Indigenous Cultures Janet McGaw, Anoma Pieris, 2014-11-13 Metropolitan Indigenous Cultural Centres have become a focal point for making Indigenous histories and contemporary cultures public in settler-colonial societies over the past three decades. While there are extraordinary success stories, there are equally stories that cause concern: award-winning architecturally designed Indigenous cultural centres that have been abandoned; centres that serve the interests of tourists but fail to nourish the cultural interests of Indigenous stakeholders; and places for vibrant community gathering that fail to garner the economic and politic support to remain viable. Indigenous cultural centres are rarely static. They are places of 'emergence', assembled and re-assembled along a range of vectors that usually lie beyond the gaze of architecture. How might the traditional concerns of architecture – site, space, form, function, materialities, tectonics – be reconfigured to express the complex and varied social identities of contemporary Indigenous peoples in colonised nations? This book, documents a range of Indigenous Cultural Centres across the globe and the processes that led to their development. It explores the possibilities for the social and political project of the Cultural Centre that architecture both inhibits and affords. Whose idea of architecture counts when designing Indigenous Cultural Centres? How does architectural history and contemporary practice territorialise spaces of Indigenous occupation? What is architecture for Indigenous cultures and how is it recognised? This ambitious and provocative study pursues a new architecture for colonised Indigenous cultures that takes the politics of recognition to its heart. It advocates an ethics of mutual engagement as a crucial condition for architectural projects that design across cultural difference. The book's structure, method, and arguments are dialogically assembled around narratives told by Indigenous people of their pursuit of public recognition, spatial justice, and architectural presence in settler dominated societies. Possibilities for decolonising architecture emerge through these accounts.
