financial business degree: *Business Leaders and New Varieties of Capitalism in Post-Communist Europe* Katharina Bluhm, Bernd Martens, Vera Trappmann, 2013-09-23 Business leaders exert extraordinary influence on institution building in market economies but they think and act within institutional settings. This book combines both an elite approach with a varieties-of-capitalism approach. Comparing Poland, Hungary and East and West Germany, we perceive the transformations in East Central Europe and in Germany after 1989 as being intertwined. Based on a joint survey, this book seeks to measure the level of the convergence of ideas among European business leaders, assuming it to be more extensive than the institutional convergence expected under the dominance of neoliberal discourse. Analyzing the institutional framework, organizational features like size, ownership and labour relations, and subjective characteristics like age, social origin, career patterns and attitudes of the recent business elites, we found significant differences between countries and the types of organization. The growing importance of economic degrees and internationalization shows astonishingly little explanatory power on the views of business leaders. The idea of a coordinated market economy is still relatively widespread among Germans, while their Hungarian and Polish counterparts are more likely to display a minimalist view of corporate responsibility to society and adverse attitudes towards employee representation. However, their attitudes frequently tend to be inconsistent, which mirrors the mixed type of capitalism in East Central Europe.

financial business degree: Linked Data Adoption and Application Within Financial Business Processes: Kathrin Kalcheva, 2016-05 This book is the first part of a two book series. It is based on a combination of Finance and IT. More precisely, it applies the concept of Linked Data (hence LD), which originates from the IT landscape, to the specifics of the financial world. LD is a

new concept for efficient handling of data, which could be used for dealing with a complex data set and data structures, as well as Big Data. The focus of this book is on the adoption of LD and its application within financial business processes. First, LD is briefly explained and framed in the context of the financial services domain. Second, modeling the determinants of LD adoption needed a clear statement over its advantages and disadvantages, amongst others within the financial domain. Despite the high interest towards the LD concept, no such overview existed before this work. Fourth, the model on LD adoption is applied to business (financial) reporting, illustrated with the XBRL case. Finally, semi-structured interviews with financial experts reconfirm and extend the findings. The main potentials are described in detail.
