finnair business class seat: *Buying the Big Jets* Paul Clark, 2017-07-14 Selecting the right aircraft for an airline operation is a vastly complex process, involving a multitude of skills and considerable knowledge of the business. *Buying the Big Jets* has been published since 2001 to provide expert guidance to all those involved in aircraft selection strategies. This third edition brings the picture fully up to date, representing the latest developments in aircraft products and best practice in airline fleet planning techniques. It features a new section that addresses the passenger experience and, for the first time, includes regional jet manufacturers who are now extending their

product families into the 100-plus seating category. Overall, the third edition looks at a broader selection of analytical approaches than previously and considers how fleet planning for cost-leader airlines differs from that of network carriers. Buying the Big Jets is an industry-specific example of strategic planning and is therefore a vital text for students engaged in graduate or post-graduate studies either in aeronautics or business administration. The book is essential reading for airline planners with fleet planning responsibility, consultancy groups, analysts studying aircraft performance and economics, airline operational personnel, students of air transport, leasing companies, aircraft value appraisers, and all who manage commercial aircraft acquisition programmes and provide strategic advice to decision-makers. It is also a valuable tool for the banking community where insights into aircraft acquisition decisions are vital.

finnair business class seat: *Airimagination* Nawal K. Taneja, 2022-09-29 Unprecedented social changes, accelerated by facilitating technologies and the COVID-19 pandemic, are calling for airlines to think deeply and non-conventionally on what will be important to existing and new travelers, as they change their lifestyles. New thinking requires airlines to extend the boundaries of their businesses to go beyond their traditional domains. This need goes beyond the renovation and

iteration of conventional products to the transformation of products requiring new ideas and ways to scale them. Examples include the development of cost-effective urban air mobility, intermodal passenger transportation, door-to-door travel that is sustainable, and personalized offers.

Airimagination: Extending the Airline Business Boundaries raises some thought-provoking questions and provides a direction for practical solutions. For example, what if airlines developed products and services that finally meet end-to-end needs of customers seamlessly by collaborating in the value-adding open ecosystems, using platforms that facilitate effective engagement with both digital and nondigital customers and employees in real time and at each touch point? Ironically, the current time is an advantage for some airlines as they already have had to deal with a deep and wide disruption caused by the pandemic, leading operations to start from ground zero. This book, the latest in a long and well-regarded series by Nawal K. Taneja, explores innovative best practices within the airline business world, complemented by numerous insightful perspectives contained in multiple forewords and thought leadership pieces. This book is aimed primarily at high-level practitioners within the airline industry and related businesses.

Structured around the authors' original Innovation Pentathlon framework, the book explains what innovation is, why it is important and how it can be managed. Built upon the authors' extensive experience and with case studies covering companies from Tetley Tea to Singapore Airlines, this is a vital resource for students aiming to succeed in both their academic and professional lives. New to this edition: - Embedded critical reflections on all aspects of management combined with practical 'management recommendations', ensuring the textbook is highly relevant to current practicing managers while preparing students for their management careers post-study. - Extended chapter on innovation management in the service industries to reflect the increased importance of this sector. With a careful balance of both theory and practice, an improved structure and a new and updated companion website, this is the essential companion for upper-level undergraduate, postgraduate and MBA students of innovation management.
