gulfstream business jets for sale: Subsonic versus Supersonic Business Jets - Full Concept Comparison considering Technical, Environmental and Economic Aspects Michael Hans-Reichel, 2012-01-19 Inhaltsangabe:Introduction: On the 26th of August 2010 the new ultra-large-cabin ultra-long-range Gulfstream G650 business jet reached Mach 0.995 during its flight test campaign (1). This is almost the speed of sound (Mach 1) and inspires one to say, why not fly faster than the speed of sound! Reduce travelling time in the commercial business aviation segment. This is, however not a completely new vision. Many companies and research facilities have already spent a lot of time and investment in studies to investigate the feasibility of supersonic flight. Entry Into Service (EIS) for the new Gulfstream G650 is scheduled for 2012. In the following the main performance parameter of the G650 aircraft will be summarised. The parameters range, cruise speed, MTOW, etc. have been selected and serve as a basis to allow an appropriate comparison between the G650 as the latest high end Subsonic Business Jet and potential in future Supersonic Business Jets (SSBJ) within this subject Master Thesis. With the impressive maximum range of nearly 13,000 km the G650 can connect Dubai with New York or London with Buenos Aires within almost 14 hours. Maximum Range @ Normal Cruise Speed: 7,000 nm/12,964 km. Normal Cruise Speed Mach: 0.85/904 km/h. Mmo (Maximum Operating Mach Number): Mach 0.925. Maximum Cruise Altitude: 51,000 ft/15,545 m. Maximum Takeoff Weight (MTOW): 99,600 lb/45,178 kg. Maximum Fuel Weight: 44,200 lb/20,049 kg. Passengers: 11 18. Price: appr. 60-70 million USD. Gulfstream business rival Bombardier Aerospace also announced in October 2010 two new high end models, the Global 7000 and 8000 with a maximum range of 7,300 nm (13,520 km) and 7,900 nm (14,631 km) at cruise speed Mach 0.85. Entry Into Service is scheduled for 2016 (Global 7000) and 2017 (Global 8000). A comprehensive overview of business jets in service and in development is given in attachment 13.1. A Supersonic Business Jet flying at Mach 2 cruise speed could virtually halve the travelling time, which would enormously enhance the mobility and flexibility. In order to achieve this ambition a paradigm shift is required. New technologies must be established, the impact on the environment must be understood and minimised, existing regulations must be changed to permit overland flight restrictions and the product still needs to be economically viable. All of the above aspects must be considered and will be subject for discussion within this Master Thesis (See also figure [...])

Paulson would become owner of the Fortune 500 aerospace empire Gulfstream Aerospace Corporation. He began his career as an airplane mechanic, later setting world records as a pilot and developing unique military and civilian jets. Paulson was ambitious and reticent, generous and frugal, confident and dogged by self-doubt. His friends included U.S. presidents, Hollywood celebrities and famous aviators. He toasted and tangled with such business titans as Lee Iacocca and Teddy Forstmann--until life took him in another direction. Paulson played by the rules and took each success and setback in stride, always with a keen ethical sense and an unflagging entrepreneurial spirit.

gulfstream business jets for sale: *The General Aviation Industry in America* Donald M. Pattillo, 2020-03-09 The industry known as general aviation--encompassing all flying outside of the military and commercial airlines--dates from the early days of powered flight. As technology advanced, making possible smaller aircraft that could be owned and operated by civilians, manufacturers emerged to serve a growing market. Increasingly this meant business flying, as companies used aircraft in a variety of roles. The industry struggled during the Great Depression but development continued; small aircraft manufacturers became vital to the massive military production effort during World War II. After the war, rapid technological advancement and a robust, prosperous middle class were expected to result in a democratized civil aviation industry. For many reasons this was never realized, even as general aviation roles and aircraft capabilities expanded. Despite its many reverses and struggles, entrepreneurship has remained the driving factor of the industry.

gulfstream business jets for sale: *Biz Jets* Almarin Phillips, A. Paul Phillips, Thomas R. Phillips, 2012-12-06 Biz Jets: Technology and Market Structure in the Corporate Jet Aircraft Industry traces the development of business jet aircraft from the mid-1950s through early 1993. It begins with a discussion of the technological and market opportunities existing in the period prior to the introduction of the Lockheed JetStar and the North American Sabreliner. The subsequent appearances of other biz jets -- the Learjets, HS-125s, Jet Commanders, Falcons, Gulfstreams, Citations, Challengers, Mitsubishi's and derivative aircraft are treated in considerable detail. Biz Jets also covers 'planes involved in many unsuccessful attempts to enter the industry from 1955 through 1993. The study shows that while the industry has been quite concentrated throughout its history, the positions of the leading firms have always been contestable. Indeed, leaders at one point in time have often been displaced by others who succeeded in marshalling technological and market opportunities to their advantage. Manufacturers have had to undertake continuous efforts to improve the price-performance characteristics of their aircraft to gain and hold their market shares. Rivalries in the effective use of the stream of new technologies have brought forth new aircraft with both better performance and lower operating costs. At the same time, however, participation in the market has been extremely risky. Only a few companies have been able to earn profits. Entries, exits and mergers have altered the structure of the industry, but it remained decidedly unstable at least through 1992.
