intuitive surgical business model: Value Creation Principles Bartley J. Madden, 2020-06-23 PRAISE FOR VALUE CREATION PRINCIPLES In Value Creation Principles, Madden introduces the Pragmatic Theory of the Firm that positions the firm as a system fueled by human capital, innovation, and, at a deeper level, imagination. He challenges us to understand how we know what we think we know in order to better discover faulty assumptions that often are camouflaged by language. His knowledge building loop offers guideposts to design experiments and organize feedback to facilitate early adaptation to a changed environment and to avoid being mired in ways of thinking rooted in 'knowledge' of what worked well in the past a context far different from the context of today. His book explains a way of being that enables those who work for, or invest in, business firms to see beyond accounting silos and short-term quarterly earnings and to focus on capabilities instrumental for creating long-term future and sustainable value for the firm's stakeholders. I can't recommend this astounding book enough especially given its deep and timely insights for our world today. John Seely Brown, former Chief Scientist for Xerox Corp and Director of its Palo Alto Research Center (PARC); co-author with Ann Pendleton-Jullian of Design Unbound: Designing for Emergence in a White Water World In contrast to existing abstract theories of the firm, Madden's pragmatic theory of the firm connects management's decisions in a practical way to a firm's life cycle and market valuation. The book promotes a firm's knowledge building proficiency, relative to competitors, as the fundamental driver of a firm's long-term performance, which leads to insights about organizational capabilities, intangible assets, and excess shareholder returns. Value Creation Principles is ideally suited to facilitate progress in the New Economy by opening up the process by which firms build knowledge and create value, which is a needed step in revising how neoclassical economics treats the firm. Tyler Cowen, Professor of Economics, George Mason University; co-author of the popular economics blog Marginal Revolution Bartley Madden rightfully points out that both textbook and more advanced economic theories of the firm fail to address the

concerns of top management and boards of directors. He offers a tantalizing pragmatic alternative that directly connects to quantitative changes in the firm's market value. His framework gives recognition to the importance of intangible assets, and his pragmatic approach is quite complementary to the Dynamic Capabilities framework that strategic managers implicitly and sometimes explicitly employ. David J. Teece, Thomas W. Tusher Professor in Global Business, Faculty Director, Tusher Center for the Management of Intellectual Capital, Haas School of Business, University of California, Berkeley

intuitive surgical business model: Tales from a Robotic World Dario Floreano, Nicola Nosengo, 2022-09-27 Stories from the future of intelligent machines—from rescue drones to robot spouses—and accounts of cutting-edge research that could make it all possible. Tech prognosticators promised us robots—autonomous humanoids that could carry out any number of tasks. Instead, we have robot vacuum cleaners. But, as Dario Floreano and Nicola Nosengo report, advances in robotics could bring those rosy predictions closer to reality. A new generation of robots, directly inspired by the intelligence and bodies of living organisms, will be able not only to process data but to interact physically with humans and the environment. In this book, Floreano, a roboticist, and Nosengo, a science writer, bring us tales from the future of intelligent machines—from rescue drones to robot spouses—along with accounts of the cutting-edge research that could make it all possible. These stories from the not-so-distant future show us robots that can be used for mitigating effects of climate change, providing healthcare, working with humans on the factory floor, and more. Floreano and Nosengo tell us how an application of swarm robotics could protect Venice from flooding, how drones could reduce traffic on the congested streets of mega-cities like Hong Kong,

and how a “long-term relationship model” robot could supply sex, love, and companionship. After each fictional scenario, they explain the technologies that underlie it, describing advances in such areas as soft robotics, swarm robotics, aerial and mobile robotics, humanoid robots, wearable robots, and even biohybrid robots based on living cells. Robotics technology is no silver bullet for all the world’s problems—but it can help us tackle some of the most pressing challenges we face.

The need to ensure that the varied voices that exist within and outside of organizations are encouraged, listened to and acted upon to drive engagement, retention, innovation-and market power. The companies that are leading the pack in terms of profit, innovation and employee engagement get it. No, they're not perfect and they're not achieving 100 percent inclusion 100 percent of the time.
