nordpass business: Effective Cybersecurity Operations for Enterprise-Wide Systems Adedoyin, Festus Fatai, Christiansen, Bryan, 2023-06-12 Cybersecurity, or information technology security (I/T security), is the protection of computer systems and networks from information disclosure; theft of or damage to their hardware, software, or electronic data; as well as from the disruption or misdirection of the services they provide. The field is becoming increasingly critical due to the continuously expanding reliance on computer systems, the internet, wireless network standards such as Bluetooth and Wi-Fi, and the growth of smart devices, which constitute the internet of things (IoT). Cybersecurity is also one of the significant challenges in the contemporary world, due to its complexity, both in terms of political usage and technology. Its primary goal is to ensure the dependability, integrity, and data privacy of enterprise-wide systems in an era of increasing cyberattacks from around the world. *Effective Cybersecurity Operations for Enterprise-Wide Systems* examines current risks involved in the cybersecurity of various systems today from an enterprise-wide perspective. nordpass business: **Cybercognitivismo. La psicologia della cybersicurezza** Fabrizio Saviano, 2024-04-30 "Cybercognitivismo" può essere definito come la psicologia delle truffe: tra quelle online o offline la differenza è che Internet ti rende raggiungibile e nasconde meglio i criminali. Fornisce finalmente una risposta a molte domande: Perché la password più utilizzata è ancora "123456789"? Perché la tecnologia non ci sta salvando? Perché tutti sanno cosa devono fare, ma nessuno lo fa? Una lettura alla portata di tutti che riorganizza la cybersecurity e i bias più importanti tra i centinaia che il nostro cervello usa in ogni istante: automatismi che possono essere sfruttati per accedere al nostro conto corrente o rubare la nostra identità. Uno strumento innovativo, pratico e indispensabile per difendersi dalle frodi in modo efficace.
