t mobile business vs personal: *Mobile Services in the Networked Economy* Vesa, Jarkko, 2005-01-31 The mobile services industry is going through a major transformation, which challenges many of the basic assumptions behind the existing business models. As the business paradigm shifts from voice-centric to data-centric mobile services, the ways of analyzing the industry need to evolve as well. *Mobile Services in the Networked Economy* provides new insight into the structure and dynamics of the mobile services industry by combining novel ideas from the complexity theory, from the research of vertical integration strategies and from the theories of networked organizations. These ideas and theories are then applied to the context of three different types of mobile services markets in Japan, Finland and the UK. The case analyses demonstrate how the three markets are currently going through very distinct phases of evolution in a continuum between two very different kinds of business environments. The analysis of the mobile services industry presented in this book will help the reader not only to understand the logic behind the way the industry looks today, but also to foresee possible future trends in the development of a given mobile services market.

t mobile business vs personal: The Social Network Business Plan David Silver, 2009-03-23 All of us know that users of the Web do not read advertisements on the websites we visit, yet the online communities are emerging as the next great media rely solely on this method to produce revenue. In *The Social Network Business Plan*, social network expert, David Silver presents and explains 18 cutting-edge methods to create revenue for social network websites--none of which are advertising. He also predicts the demise of seemingly successful online communities such as MySpace and

Facebook that rely on advertising as non-sustainable modalities. Silver describes and explains that in the future new products and services will be introduced, talked about, rated, reviewed and recommended - or killed - by online communities. One example of the 18 new revenue channels that online communities are adopting is the sale to vendors of anonymized conversations of the community members concerning those vendors' products or services. Another example is online communities who partner with the internet providers to receive payment when a particular online community's information is downloaded using that providers service. The other sixteen revenue channels are equally head-turning! Silver is the only angel investor, operating down where the rubber meets the road, who is investing in online communities in their infancy, and writing about which ones will win and which ones will fail.

With their comprehensive three-year study, the authors confirmed many known Web design conventions and the book provides additional insights on those standards. They also discovered important new user behaviors that are revealed here for the first time. Using compelling eye gaze plots and heat maps, Nielsen and Pernice guide the reader through hundreds of examples of eye movements, demonstrating why some designs work and others don't. They also provide valuable advice for page layout, navigation menus, site elements, image selection, and advertising.
