Commercialization of Research-Based Products Szopa, Anna, 2015-09-21 In recent years, the pace of technological growth—from the very first stages of research and development to full-scale industrial implementation—has quickened at an exponential rate. To better keep pace with rapidly-changing market demands, the gap between university research incubators and public-sector start-up companies has undergone a marked contraction. *Competitive Strategies for Academic Entrepreneurship: Commercialization of Research-Based Products* seeks to fill the gap in research between universities and the public, and offers cutting-edge insight into the current state of the field. Charting a course that moves from discussions of academic resistance and implications for knowledge-transfer theory to current case-studies of academic/industrial launch-pads like COTEC's Technology Commercialization Accelerator and the Maryland Industrial Partnerships program, this publication targets an audience of academicians, administrators, researchers, entrepreneurs, and established professionals, and seeks to provide insight into the mechanisms by which the research of today becomes the household names of tomorrow.

umd business minor: Artificial Satellites and How to Observe Them Richard Schmude, Jr., 2012-07-04 Every amateur astronomer - and many non-astronomers - will be familiar with seeing a star that shows that characteristic steady slide across the starry background of the sky. Artificial satellites can be seen any night, and some as bright as the planets. But how many of us can identify which satellites or spent launch vehicle casing we are seeing? Artificial Satellites and How to Observe Them describes all the different satellites that can be observed without optical aid, including of course the International Space Station and the many spy satellites operated by different nations. Richard Schmude looks at them in detail and describes how they can be observed by amateurs, how to recognize them, and even how to predict their orbits. Artificial satellites have changed since the beginning of the millenium. Several additional countries have launched them. And amateur astronomers have utilized digital cameras in order to image satellites to a resolution of about three feet. This book describes how to recognize, observe, and image satellites. Examples of recent images and how they were made are given. It also offers up-to-date descriptions of the many satellites that are orbiting the Earth and other celestial bodies. Readers can learn how satellites impact our day-to-day lives. In short, Artificial Satellites and How to Observe Them is a detailed and up-to-date overview of artificial satellites and how to study them in the night sky.

umd business minor: Genetics of Adaptation Rodney Mauricio, 2005-07-20 An enduring controversy in evolutionary biology is the genetic basis of adaptation. Darwin emphasized many slight differences as the ultimate source of variation to be acted upon by natural selection. In the early 1900's, this view was opposed by Mendelian geneticists, who emphasized the importance of macromutations in evolution. The Modern Synthesis resolved this controversy, concluding that mutations in genes of very small effect were responsible for adaptive evolution. A decade ago, Allen Orr and Jerry Coyne reexamined the evidence for this neo-Darwinian view and found that both the theoretical and empirical basis for it were weak. Orr and Coyne encouraged evolutionary biologists to reexamine this neglected question: what is the genetic basis of adaptive evolution? In this volume, a new generation of biologists have taken up this challenge. Using advances in both molecular genetic and statistical techniques, evolutionary geneticists have made considerable progress in this emerging field. In this volume, a diversity of examples from plant and animal studies provides valuable information for those interested in the genetics and evolution of complex traits.

umd business minor: Technology Entrepreneurship and Sustainable Development Pradeep Ray, Rajib Shaw, 2022-06-16 This book discusses the need for entrepreneurship for sustainable development from the perspective of Asia, the fastest growing region in the world. The world is now witnessing a spectacular rise of technology entrepreneurship, involving mobile phones, artificial intelligence, geospatial information systems and social media. On the other hand, governments all over the world, particularly those in low and medium income countries, are facing severe resource constraints in developing the livelihood and well-being of citizens. Although many non-government organizations (NGOs) have worked on various development projects in a number of social sectors such as health, education, disabilities, poverty alleviation and environment, there is still substantial scope for technological innovation, including more efficient, effective and user-friendly solutions in different parts of the world. This book is organized into 2 parts and consists of 17 chapters. The first part explores education and well-being, and the second part discusses the climate, environment and disaster management.
