The advent of online, cellular, and other digital networks has enabled today's government surveillance operations to become more extensive and far more thorough than any other programs before them. Where does the line between taking actions to help ensure the safety of the general population against terrorism and other threats and the privacy of individual citizens lie? Is there any such clearly defined line anymore? This two-volume set examines the key issues surrounding government surveillance and privacy in 21st-century America, covering topics ranging from the surveillance conducted during colonial days, which inspired the Fourth Amendment, to the new high-tech developments that pose unprecedented potential challenges to the privacy of millions of Americans. Readers will gain insight into the complex challenge of interpreting the Fourth Amendment protections against warrantless, unreasonable

Chaudhry, 2007-12-24 Research and Practical Issues of Enterprise Information Systems II, Volume 1 presents work from the IFIP TC 8 WG 8.9 International Conference on the Research and Practical Issues of Enterprise Information Systems (CONFENIS 2007). Enterprise information systems (EIS) have become increasingly popular over the last 15 years. EIS integrate and support business processes across functional boundaries in a supply chain environment. In recent years, more and more enterprises world-wide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses. Previously, information systems such as CAD, CAM, MRPII and CRM were widely used for partial functional integration within a business organization. With global operation, global supply chain, and fierce competition in place, there is a need for suitable EIS such as ERP, E-Business or E-Commerce systems to integrate extended enterprises in a supply chain environment with the objective of achieving efficiency, competency, and competitiveness. As an example, the global economy has forced business enterprises such as Dell and Microsoft to adopt ERP in order to take the advantage of strategic alliances within a global supply chain environment. Today, not only the large companies, but also the medium companies are quickly learning that a highly integrated EIS is more and more a required element of doing business. Businesses all over the world are investing billions of dollars in acquiring and implementing EIS in particular ERP systems by SAP and Oracle. As a result, there is a growing demand for researching EIS to provide insights into challenges, issues, and solutions related to the design, implementation and management of EIS.
