vans for business casual: Buttoned Up Erynn Masi de Casanova, 2015-11-17 Who is today's white-collar man? The world of work has changed radically since *The Man in the Gray Flannel Suit* and other mid-twentieth-century investigations of corporate life and identity. Contemporary jobs are more precarious, casual Friday has become an institution, and telecommuting blurs the divide between workplace and home. Gender expectations have changed, too, with men's bodies increasingly exposed in the media and scrutinized in everyday interactions. In *Buttoned Up*, based on interviews with dozens of men in three U.S. cities with distinct local dress cultures—New York, San Francisco, and Cincinnati—Erynn Masi de Casanova asks what it means to wear the white collar now. Despite the expansion of men's fashion and grooming practices, the decrease in formal dress codes, and the relaxing of traditional ideas about masculinity, white-collar men feel constrained in their choices about how to embody professionalism. They strategically embrace conformity in clothing as a way of maintaining their gender and class privilege. Across categories of race, sexual orientation and occupation, men talk about blending in and looking the part as they aim to keep their jobs or pursue better ones. These white-collar workers' accounts show that greater freedom in work dress codes can, ironically, increase men's anxiety about getting it wrong and discourage them from experimenting with their dress and appearance.

vans for business casual: *Under Pressure* Robert Pobi, 2020-08-04 Complexly plotted... skillfully drawn. --The Wall Street Journal A series of deadly explosions rock the city of New York and with too many victims and no known motive, the F.B.I. turns once again to Dr. Lucas Page in Robert Pobi's *Under Pressure*. On a beautiful October evening, New York City's iconic Guggenheim Museum is closed for a tech company's private gala. Until an explosion rocks the night, instantly killing 702 people, including every single attendee—yet the damage to the building itself was minimal. An explosion of that precision was no accident and, in response, the FBI mobilizes its entire team -- but the sheer number of victims strains their resources. Were all 702 victims in the wrong place at the wrong time, or was there only one target and 701 unlucky bystanders? That many victim files is a staggering amount of data to sort through and Brett Kehoe, Special Agent in Charge of Manhattan, decides that he can't do this without more computational power. Dr. Lucas Page, astrophysicist, university professor, and former FBI agent, is uniquely gifted for the task at hand—he can visualize a crime scene as if he was a bystander and can break down any set of data at a glance. Even though Page wants nothing to do with the FBI, with his city under attack and his family at risk, he steps in to find a killer in a haystack before they strike again.
