Pinto, Mike Thomas, 2023-09-05 This book is for people who teach calculus – and especially for people who teach student teachers, who will in turn teach calculus. The calculus considered is elementary calculus of a single variable. The book interweaves ideas for teaching with calculus content and provides a reader-friendly overview of research on learning and teaching calculus along with questions on educational and mathematical discussion topics. Written by a group of international authors with extensive experience in teaching and research on learning/teaching calculus both at the school and university levels, the book offers a variety of approaches to the teaching of calculus so that you can decide the approach for you. Topics covered include A history of calculus and how calculus differs over countries today Making sense of limits and continuity, differentiation, integration and the fundamental theorem of calculus (chapters on these areas form the bulk of the book) The ordering of calculus concepts (should limits come first?) Applications of calculus (including differential equations) The final chapter looks beyond elementary calculus. Recurring themes across chapters include whether to take a limit or a differential/infinitesimal approach to calculus and the use of digital technology in the learning and teaching of calculus. This book is essential reading for mathematics teacher trainers everywhere.

calculus 2 free online course: Creative Learning and MOOCs Haifa Jamal Al-Lail, Nabil Sultan, 2015-10-13 This volume brings together a collection of selected (and revised) articles that were presented at the 11th Learning and Technology Conference held by Effat University in Jeddah, Saudi Arabia, in February 2014. The conference is an annual event that explores the latest research and practice in innovative technologies and their impact on education. The contributions to this volume are all authored by practicing academics and research students, with the central theme the realisation that learning and teaching are strongly influenced by technology and innovation. Schools, colleges and academic institutes took the lead in harnessing this technology and created innovative opportunities for learning that did not exist before, one of which being the field of e-Learning. One of the latest innovations in education is the introduction of Massive Open Online Courses (MOOCs), which represents an interesting development in the use of technology and innovation by providing opportunities for learning to massive numbers of students (regardless of their location) at almost no cost. This phenomenon is subject to a great deal of analysis in this book, and will provide an interesting read for students, teachers, decision makers and ordinary people. A particular strength of this book is that the contributors are drawn from, and represent, a number of cultural backgrounds, which provides a range of insights that is often missing from other publications on such important subjects.

India: Advantages, Challenges and Suggestions for Implementation Yash Paul Sharma, 2015-11-01 Education is the backbone of any country. In India Right to Education encompasses the compulsory and free education to children between 6 and 14 years. But because of diverse sociological, geographical and political situation to achieve the target is far from reality. With changing time, new and innovative technologies make it possible to spread the seed of education to unreached and MOOCs (Massive Open Online Courses) are one among them. MOOCs have various advantages over traditional teaching but challenging too. Implementation of MOOCs for school education requires technical expertise along with army of trainers. MOOCs will provide additional support to the learner as well teacher and also in teacher training programmes. MOOCs will be more beneficial for out of school children and in technical education. The MOOCs should be in blended mode and if Government adopts any strategy for certification as par with regular education, the MOOCs will be boon for India. A comprehensive model for MOOCs delivery is the need of the hour.
