calculus 2 online summer: Strength of This Woman Jannelle Charlemagne, 2011-11 When we're afraid, that fear robs us of being content. Fear robs us from living a comfortable life; that fear also robs & rules a lot of people that feel stuck due to their fear. We will never be free from fear until we stop making excuses about situations in our lives. We can't punish ourselves & everyone else for what one person or others did & have done to cause the situation or for what has happened in our lives. We need to change the way we think & live in the now--present tense. Let the past be the past & let it stay in past tense. A person can't change what has happened, but can look forward to the future. Looking forward can reveal the possibilities that lie ahead and lead to change. As women & men, we need to find ways to stand up for ourselves & break free from our silence to get rid of fear & shame....We need to take steps to help ourselves become stronger & smarter. Honoring the process with patience, I'm taking the time to notice what I have rather than what I don't. I also continually practice shifting my focus to what's positive; that focus keeps me going along with me not giving up on myself even when at times I do feel and have been discouraged. It's hard but there's always hope! Despite my setbacks, pain, loss, hurt and struggles, I'm still making the best of a bad situation. Also I hope that even one person, and hopefully many more, can gain strength from my story.

calculus 2 online summer: The Routledge Companion to Digital Consumption Rosa Llamas, Russell Belk, 2013-05-07 The first generation that has grown up in a digital world is now in our university classrooms. They, their teachers and their parents have been fundamentally affected by the digitization of text, images, sound, objects and signals. They interact socially, play games, shop, read, write, work, listen to music, collaborate, produce and co-produce, search and browse very differently than in the pre-digital age. Adopting emerging technologies easily, spending a large proportion of time online and multitasking are signs of the increasingly digital nature of our everyday lives. Yet consumer research is just beginning to emerge on how this affects basic human and consumer behaviours such as attention, learning, communications, relationships, entertainment and knowledge. The Routledge Companion to Digital Consumption offers an introduction to the perspectives needed to rethink consumer behaviour in a digital age that we are coming to take for granted and which therefore often escapes careful research and reflective critical appraisal.

calculus 2 online summer: *Connecting America* Barry Leonard, 2010-11 Broadband is the great infrastructure challenge of the early 21st century. Broadband is a foundation for economic growth, job creation, global competitiveness and a better way of life. The number of Americans who have broadband at home has grown from 8 million in 2000 to nearly 200 million last year. But, 100 million Americans do not have broadband at home. In early 2009, Congress directed the FCC to develop a National Broadband Plan to ensure that every American has access to broadband capability. This plan must also include a strategy for achieving affordability and maximizing use of broadband. The plan presented here ensures that the entire broadband ecosystem – networks, devices, content and applications – is healthy. Illus.

calculus 2 online summer: *The Rise of Politically Motivated Cyber Attacks* Tine Munk, 2022-03-23 This book outlines the complexity in understanding different forms of cyber attacks, the actors involved, and their motivations. It explores the key challenges in investigating and prosecuting politically motivated cyber attacks, the lack of consistency within regulatory frameworks, and the grey zone that this creates, for cybercriminals to operate within. Connecting diverse literatures on cyberwarfare, cyberterrorism, and cyberprotests, and categorising the different actors involved – state-sponsored/supported groups, hacktivists, online protestors – this book compares the means and methods used in attacks, the various attackers, and the current strategies employed by cybersecurity agencies. It examines the current legislative framework and proposes ways in which it could be reconstructed, moving beyond the traditional and fragmented definitions used to manage offline violence. This book is an important contribution to the study of cyber attacks within the areas of criminology, criminal justice, law, and policy. It is a compelling reading for all those engaged in cybercrime, cybersecurity, and digital forensics.

This essential resource offers pertinent, statistical data on such topics as tuition, room and board; admission requirements; financial aid; enrollments; student life; library holdings; accelerated and study abroad programs; departments and teaching staff; buildings and grounds; and degrees conferred. Volume two of the set provides four indexes, including an institutional Index, a subject accreditation index, a levels of degrees offered index, and a tabular index of summary data by state. These helpful indexes allow readers to find information easily and to make comparisons among institutions effectively. Also contained within the text are charts and tables that provide easy access to comparative data on relevant topics.

calculus 2 online summer: Human Costs of War Bulent Gokay, Lily Hamourtziadou, 2024-09-12 Human Costs of War documents and analyses the direct and indirect toll that war takes on civilians and their livelihoods, taking a human security approach exploring personal, economic, political and community security in Afghanistan, Iraq and Ukraine, in the contexts of the War on Terror and the New Cold War. The book offers an understanding of war through the recording and comprehension of its civilian casualties and evaluates whether the force used has been proportionate to the threat that prompted it and the concern for human welfare. In the 21st century, the power of the USA has declined, while countries such as China and India become more powerful. The global power balance has been altered in a fundamental way towards a multi-polar world system, with the West no longer able to enforce its policies abroad. Regional and global governance are not assured, and devastating wars have taken a heavy toll in terms of death, poverty and displacement, which feed into the cycle of long-term insecurity. The authors argue that it is important for any conflict to be understood not only in terms of the perpetrators of violence, or of the political and economic reasons behind it, but also in terms of its impact on the civilian population and their security, focusing on conflicts in the Middle East which followed 9/11 and Russia's invasion of Ukraine. The book will be of interest to academics, the public, the media, security agencies and international organisations. It will be useful for undergraduate and postgraduate students of International Relations, International Law, Security, Politics, Policing, Human Rights, Ethics, Peace Studies, Eastern Europe, American Studies and the Middle East.
