2019 ap stats exam practice: Growing Up on the Gridiron Vicki Mayk, 2020-09-01 Explores the experience of one young man and the concerns about CTE he helped to illuminate, and the cultural allure of football in America that keeps boys trying to make the team despite the dangers Award-winning journalist Vicki Mayk raises a critical question for football players and their communities: does loving a sport justify risking your life? This is the insightful and deeply human story of Owen Thomas—a star football player at Penn, who took his own life when he was 21, the result of the pain and anguish caused by chronic traumatic encephalopathy (CTE). It was Owen's landmark case which demonstrated that a player didn't need years of head bashing in the NFL, or even multiple sustained brain concussions, to cause the mind-altering, life-threatening, degenerative disease known as CTE. And Owen's case could not have come to light without Dr. Ann McKee, the neuropathologist who bucked conventional wisdom, and the football establishment, as she examined Owen's brain and its larger significance, building an ever-stronger case that said, at the very least, football should not be played by children under the age of 14. With its focus on a single life and the community touched by it—Owen's family, his teammates and friends, his teachers and coaches, and, later, Dr. McKee—Growing Up on the Gridiron explores the place of football in our lives. It doesn't make a heavy-handed argument to abandon the sport. Rather, it explores why football matters so deeply to many young men, and why they continue to take risks despite the evidence of serious, long-term harm.

2019 ap stats exam practice: Statistics Behind the Headlines A. John Bailer, Rosemary Pennington, 2022-09-28 How do you learn about what's going on in the world? Did a news headline grab your attention? Did a news story report on recent research? What do you need to know to be a critical consumer of the news you read? If you are looking to start developing your data self-defense and critical news consumption skills, this book is for you! It reflects a long-term collaboration between a statistician and a journalist to shed light on the statistics behind the stories and the

stories behind the statistics. The only prerequisite for enjoying this book is an interest in developing the skills and insights for better understanding news stories that incorporate quantitative information. Chapters in Statistics Behind the Headlines kick off with a news story headline and a summary of the story itself. The meat of each chapter consists of an exploration of the statistical and journalism concepts needed to understand the data analyzed and reported in the story. The chapters are organized around these sections: What ideas will you encounter in this chapter? What is claimed? Is it appropriate? Who is claiming this? Why is it claimed? What makes this a story worth telling? Is this a good measure of impact? How is the claim supported? What evidence is reported? What is the quality/strength of the evidence? Does the claim seem reasonable? How does this claim fit with what is already known? How much does this matter? Considering the coverage Chapters close with connections to the Stats + Stories podcast.
