asl signs for hate speech: *Culturally Affirmative Psychotherapy With Deaf Persons* Neil S. Glickman, Michael A. Harvey, 2013-10-23 The impetus for this volume is the growing awareness within the mental health and larger community of a culturally affirmative model for understanding and assisting deaf people. In contrast to the medical-pathological model which treats deafness as a disability, the cultural model guides us to view deaf persons in relation to the deaf community--a group of people with a common language, culture, and collective identity. A primary tenant of culturally affirmative psychotherapy is to understand and respect such differences, not to eradicate them. The contributors to this volume present a practical and realistic model of providing culturally affirmative counseling and psychotherapy for deaf people. The three dimensions of this model have been delineated by the multicultural counseling literature. These dimensions assert that culturally affirmative psychotherapy with deaf persons requires therapist self-awareness, knowledge of the deaf community/culture, and understanding of culturally-syntonic therapeutic interventions. The first to exhaustively delineate the implications of the cultural model of deafness for counseling deaf people, this book is essential reading for anyone who works in an educational or counseling capacity with the deaf. This audience includes not only psychotherapists, but also vocational, guidance and residence counselors, teachers, independent living skills specialists, interpreters, and administrators of programs for the deaf.

asl signs for hate speech: *Pandemic Crossings* Guobin Yang, Bingchun Meng, Elaine J. Yuan, 2024-01-01 Throughout the COVID-19 crisis, nation states found new ways to assert power under the guise of public health, from closing or tightening borders to expanding the boundaries of acceptable citizen surveillance. As these controls increased in intensity, citizens' passions to cross borders seemed to grow in proportion. *Pandemic Crossings* explores how these processes of boundary making and crossing, often mediated by digital technology despite inequity of access, had profound and often contradictory consequences on individual lives, national politics, and U.S.-China relations. This rich and geographically diverse collection of studies informed by everyday, individual experiences contribute new insights to the interplay between digital technologies and state governance during the covid-19 pandemic. It opens up new avenues of research not only on the covid-19 pandemic but also on global health crises more broadly.

asl signs for hate speech: *Ableist Rhetoric* James L. Cherney, 2019-10-22 Ableism, a form of discrimination that elevates "able" bodies over those perceived as less capable, remains one of the most widespread areas of systematic and explicit discrimination in Western culture. Yet in contrast to the substantial body of scholarly work on racism, sexism, classism, and heterosexism, ableism remains undertheorized and underexposed. In this book, James L. Cherney takes a rhetorical approach to the study of ableism to reveal how it has worked its way into our everyday understanding of disability. *Ableist Rhetoric* argues that ableism is learned and transmitted through the ways we speak about those with disabilities. Through a series of textual case studies, Cherney identifies three rhetorical norms that help illustrate the widespread influence of ableist ideas in society. He explores the notion that "deviance is evil" by analyzing the possession narratives of Cotton Mather and the modern horror touchstone *The Exorcist*. He then considers whether "normal is natural" in Aristotle's *Generation of Animals* and in the cultural debate over cochlear implants. Finally, he shows how the norm "body is able" operates in Alexander Graham Bell's writings on eugenics and in the legal cases brought by disabled athletes Casey Martin and Oscar Pistorius. These three simple equivalencies play complex roles within the social institutions of religion, medicine, law, and sport. Cherney concludes by calling for a rhetorical model of disability, which, he argues, will provide a shift in orientation to challenge ableism's epistemic, ideological, and visual components. Accessible and compelling, this groundbreaking book will appeal to scholars of rhetoric and of disability studies as well as to disability rights advocates.

Habib argues that female homosexuality has a long history in Arabic literature and scholarship, beginning in the ninth century, and she traces the destruction of Medieval discourses on female homosexuality and the replacement of these with a new religious orthodoxy that is no longer permissive of a variety of sexual behaviours. Habib also engages with recent gay historiography in the West and challenges institutionalized constructionist notions of sexuality.
