becoming a learner audio book: Teaching Adult Learners Jessica A. Curtis, 2019-06-12 As adult instruction becomes a more common part of library practice, librarians need guidance in an area that may not always have been a part of their library science education. This book provides the instruction necessary to instruct adult patrons. Presenting complex concepts and ideas in an easy-to-understand format, this book applies learning theory to real-life situations and provides a much-needed resource for those responsible for or seeking to instruct adults in library settings. The book introduces learning principles and techniques that will enhance your classes, programs, and one-on-one interactions as well as increase the memory retention of participants. It will help you not only to promote learning but also to create positive library interactions and build retention. Current library instructional and theoretical texts address instructional programming but do not explain how the instructor handles learning instruction differently for individuals, general audiences, and specific audiences, or in passive situations such as through handouts or online interactions. This guide differs from other works in that it addresses all adult services positions, not only those with the title of instructional librarian, and addresses the full scope of instruction that librarians need to better meet patron needs.

becoming a learner audio book: Teaching Yourself To Teach Selena Watts, 2020-08-23 A Teacher's Guide to Inspire, Motivate, and Provide the Best Learning Experience For Your Students. Are you a teacher who struggles with classroom management and lesson planning? Alternatively, are you considering becoming a teacher and are looking to develop the essential teaching skills? A lot of teachers claim teaching is the most challenging, and at the same time, the most rewarding job in the world. Not many get the chance to shape young minds and influence people to achieve great things in life. Teachers do... but it's a hard road to travel on. Most people don't even realize the challenges teachers face every day. From lesson planning to dealing with problematic students and overbearing parents, teachers have to juggle various responsibilities all at once. The biggest one, of course, is providing the best possible learning experience for students. This particular task is extremely difficult--you have to be able to motivate and inspire a certain group of people every day while maintaining authority and making sure they understand the material. It's no wonder then, that many teachers feel like they've given everything they have and struggle to keep their students interested. The education system doesn't help much with this particular problem--most of the time, you simply get a curriculum and they send you on your own way. If you're a freelance teacher, you don't even get that. It's a blessing and a curse. On the one hand, this cold-hearted system is hindering education in general, and leaving teachers to their own means can backfire and have serious sociological consequences. But on the other hand, the system provides a crazy amount of freedom for teachers to do their own thing and be creative and versatile in their jobs. This, of course, puts an enormous amount of pressure on teachers, especially young, new teachers who are only starting to find their own teaching style. With the emergence of online classrooms and various virtual educational tools, teaching has become an art, and the teaching skills that were once valued before simply don't compare in this new, digital world. Luckily, some of those skills are still considered essential and can be applied to both physical and virtual classrooms. In Teaching Yourself to Teach, you will discover: 8+ types of learners that will help you appraise your students and come up with the best teaching strategies for each one of them Blended learning techniques that allow you to

incorporate digital tools in your real-life classrooms to enhance the learning experience A guidebook on classroom management, that will help even the most inexperienced teacher establish authority from the start Numerous tips and strategies for boosting motivation and inspiring students to excel in your class, even if you have some that are currently struggling Simple lesson planning instructions, carefully designed to make sure your classes are of the highest educational quality Tips on how to deal with problematic students and help them overcome their various learning issues And much more. becoming a learner audio book: *Neuro-Education and Neuro-Rehabilitation* Eduardo Martínez-Montes, Julie Chobert, Mireille Besson, 2016-11-04 In the last decade, important discoveries have been made in cognitive neuroscience regarding brain plasticity and learning such as the mirror neurons system and the anatomo-functional organization of perceptual, cognitive and motor abilities.... Time has come to consider the societal impact of these findings. The aim of this Research Topic of Frontiers in Psychology is to concentrate on two domains: neuro-education and neuro-rehabilitation. At the interface between neuroscience, psychology and education, neuro-education is a new inter-disciplinary emerging field that aims at developing new education programs based on results from cognitive neuroscience and psychology. For instance, brain-based learning methods are flourishing but few have been rigorously tested using well-controlled procedures. Authors of this Research Topic will present their latest findings in this domain using rigorously controlled experiments. Neuro-rehabilitation aims at developing new rehabilitation methods for children and adults with learning disorders. Neuro-rehabilitation programs can be based upon a relatively low number of patients and controls or on large clinical trials to test for the efficiency of new treatments. These projects may also aim at testing the efficiency of video-games and of new methods such as Trans Magnetic Stimulation (TMS) for therapeutic interventions in children or adolescents with learning disabilities. This Research Topic will bring together neuroscientists interested in brain plasticity and the effects of training, psychologists working with adults as well as with normally developing children and children with learning disabilities as well as education researchers directly confronted with the efficiency of education programs. The goal for each author is to describe the state of the art in his/her specific research domain and to illustrate how her/his research findings can impact education in the classroom or rehabilitation of children and adolescents with learning disorders.

Janssen, Walter Wittich, 2025-09-11 *Learning, Education, and Support of Deafblind Children and Adults* presents the latest research on topics relevant for learners with deafblindness based on the most important studies of the last two decades. The diversity of deafblind people is explored with the authors bringing together relevant information from the fields of congenital, acquired, and age-related deafblindness, and those who are deafblind from different syndromes and etiologies. Opening with a case study of a deafblind adult who shares his perspectives on barriers and facilitators in deafblind education, the volume then presents chapters by leading researchers from around the world on deafblindness. Bridging the gap between research and practice by the researchers themselves, along with deafblind individuals, the authors describe their essential research findings and interpret them in terms of valuable implications for educational and rehabilitation practice. Divided into seven sections, the themes covered include the identification of deafblind persons; specific learning areas and interdisciplinary support; learning, self-determination, and education; participation, work, and recreation; family perspective; professionalization and interdisciplinary approaches; and research, technology, and innovations. With over fifty contributors, this volume brings together the current international scholarship on deafblindness and aims to stimulate new research on this rare but significant disability.
