big beyond belief results: *Beyond Belief* Martin Bridgstock, 2009-10-29 Whether ghosts, astrology or ESP, up to 80 per cent of the population believes in one or more aspects of the paranormal. Such beliefs are entertaining, and it is tempting to think of them as harmless. However, there is mounting evidence that paranormal beliefs can be dangerous - cases of children dying because parents rejected orthodox medicine in favour of alternative remedies, and 'psychics' who trade on the grief of the bereaved for personal profit and gain. Expenditure on the paranormal runs into billions of dollars each year. In *Beyond Belief: Skepticism, Science and the Paranormal* Martin Bridgstock provides an integrated understanding of what an evidence-based approach to the paranormal - a skeptical approach - involves, and why it is necessary. Bridgstock does not set out to show that all paranormal claims are necessarily false, but he does suggest that we all need the analytical ability and critical thinking skills to seek and assess the evidence for paranormal claims.

big beyond belief results: *Beyond Belief* John L. Casti, 2018-02-06 How can we predict and explain the phenomena of nature? What are the limits to this knowledge process? The central issues of prediction, explanation, and mathematical modeling, which underlie all scientific activity, were the focus of a conference organized by the Swedish Council for the Planning and Coordination of Research, held at the Abisko Research Station in May of 1989. At this forum, a select group of internationally known scientists in physics, chemistry, biology, economics, sociology and mathematics discussed and debated the ways in which prediction and explanation interact with mathematical modeling in their respective areas of expertise. *Beyond Belief* is the result of this forum, consisting of 11 chapters written specifically for this volume. The multiple themes of randomness, uncertainty, prediction and explanation are presented using (as vehicles) several topical areas from modern science, such as morphogenetic fields, Boscovich covariance, and atmospheric variability. This multidisciplinary examination of the foundational issues of modern scientific thought and methodology will offer stimulating reading for a very broad scientific audience.

big beyond belief results: Beyond the Big Lie Bill Adair, 2024-10-15 Pulitzer Prize winner, journalism professor, and founder of PolitiFact Bill Adair, presents an "informed, urgent, and alarming" (Brian Stelter, New York Times bestselling author) history of political deception and how to stop it once and for all. Bill Adair knows a lie when he hears one. Since 2008, the site he founded, PolitiFact, has been the go-to spot for anyone seeking the truth in an increasingly deceitful world. Since the site's launch, politics' tenuous relationship with the truth has only gotten weaker—and weirder. In this groundbreaking and "valuable book" (Tom Rosenstiel, coauthor of *The Elements of Journalism*), Adair reveals how politicians lie and why. Based on dozens of candid interviews with politicians, political operatives, and experts in misinformation, Adair reveals the patterns of lying, why Republicans do it more, and the consequences for our democracy. He goes behind the scenes to describe several episodes that reveal the motivations and tactics of the nation's political liars, show the impact they have on people's lives, and demonstrate how the problem began before Donald Trump and will continue after he's gone. With wry humor and insight, this remarkable book unpacks the sad state of American politics, but also, provides solutions to put an end to political deceit once and for all.

big beyond belief results: My Big TOE Awakening Discovery Inner Workings Thomas Campbell, 2023-08-29 Section 1 provides a biography of the author pertinent to the creation of this trilogy. This look at the author's unique experience sheds light upon the origins of this work. Section 2 logically justifies the basic conceptual building blocks needed to construct My Big TOE's foundation. It discusses the cultural beliefs that trap our thinking into a narrow and limited conceptualization of reality, defines the fundamentals of Big Picture epistemology and ontology, and examines the inner-workings and practice of meditation. It defines and develops the two basic assumptions upon which this trilogy is based. From these two assumptions, time, space, consciousness, and the basic properties, purpose, and mechanics of our reality are logically inferred. Section 3 develops the interface and interaction between we the people and our digital consciousness reality. It derives and explains the characteristics, origins, dynamics, and function of ego, love, free will, and our larger purpose. It develops the psi uncertainty principle as it explains and interrelates psi phenomena, free will, love, consciousness evolution, physics, reality, human purpose, digital computation, and entropy. Section 4 describes a model of consciousness that develops the results of Section 3 and supports the conclusions of Section 5. The origins and nature of digital consciousness are described along with how artificial intelligence (AI) leads to artificial consciousness, which leads to actual consciousness and to us. It derives our physical universe, our science, and our perception of a physical reality. The physical reality is directly derived from the nature of digital consciousness. Section 5 pulls together Sections 2, 3, and 4 into a model of reality that describes how an apparent nonphysical reality works, interacts, and interrelates with our experience of physical reality. Probable realities, predicting and modifying the future, teleportation, telepathy, multiple physical and nonphysical bodies, and the fractal nature of an evolving digital consciousness reality are explained and described in detail. Section 6 is the wrap-up that puts everything into a personal perspective. It points out My Big TOE's relationship with contemporary science and philosophy. It solidly integrates My Big TOE into traditional Western scientific and philosophical thought.
