Terry Read grew up in a Christian household and went to church. But Terry did not live in a bubble. Terry watched documentaries, read magazines, read encyclopedias, and went to public school. Terry knew that what he was learning about science from all of these other sources did not mesh with the Bible. Terry tried to make the two world views fit together somehow. But Terry discovered another option that he had never been taught that a person could believe the Bible as it reads. The Bible does not contradict good science. Terry studied this. He learned that the biblical world view is actually the only world view that is consistent with even doing science. Terrys discovery was such great news to him that he wanted to share it. He knew that other people would be happy to hear this message. He knew that whether or not they admitted it, other people were doing mental gymnastics as he had done to make the Bible fit the science. Terry could see the devastation brought on society because people do not believe the Bible. But when Terry tried to share his discovery, he became frustrated. The reason Terry had so much consternation was the unexpected source of the frustration church leadership. Church leadership was actually afraid to share this message that people really can believe the Bible! This book documents Terrys struggles and tells what you can do.

bill nye wikipedia: *Supercities On, Under, and Beyond the Earth* Jeff Dondero, 2020-02-08 As more and more people inhabit the Earth and live longer on it, Super Cities will explode with populations of 20, 30, even 100 millions or more. But how will these cities accommodate such masses? Who will build them and where? How can they be sustained and their inhabitants provided for? Here, Jeff Dondero imagines the super cities of the future and explores the ways in which they can be sustainably built, how transportation will move masses of people without cars, how people will be fed and where waste will go, and how we will move to cities underground, under the sea, in the atmosphere, into space and on to other planets. It describes some of the smart systems for buildings and homes and some of the new ways food and materials enough for such masses will be supplied. Will super cities be the answer to our bursting population? And if they will, how can we best sustain and supply them? Dondero offers suggestions and a blueprint for the future.

bill nye wikipedia: *Media Dictatorship* Cedrick Ngalande, 2022-07-18 *Media Dictatorship: How Schools and Educators Can Defend Freedom of Speech* outlines how the American media amasses enormous power and uses it to control every aspect of the people's lives—including schools, elections, science, and freedom of thought. Even religious institutions, supposedly answerable to God only, are now being influenced and controlled by media. This book discusses the devastating consequences of such control on democracy and our civilization, and then offers suggestions on what can be done to identify media propaganda and defend freedom of speech. The school system has always been the first line of defense for patriotism and democracy. It is important for teachers to understand the consequences of a powerful media that does not tolerate diversity of thought. This book will encourage teachers to cultivate independence of thought among students. School administrators, too, have a responsibility to ensure that school campuses are sanctuaries of freedom of thought where leaders of tomorrow are taught to be tolerant of opposing views. In the larger public, outside the school campus, *Media Dictatorship* will spur a robust debate about the kind of media that can help nurture our democracy and civilization.

others. Climate change is a hoax--and so is coronavirus. Vaccines are bad for you. These days, many of our fellow citizens reject scientific expertise and prefer ideology to facts. They are not merely uninformed--they are misinformed. They cite cherry-picked evidence, rely on fake experts, and believe conspiracy theories. How can we convince such people otherwise? How can we get them to change their minds and accept the facts when they don't believe in facts? In this book, Lee McIntyre shows that anyone can fight back against science deniers, and argues that it's important to do so. Science denial can kill. Drawing on his own experience--including a visit to a Flat Earth convention--as well as academic research, McIntyre outlines the common themes of science denialism, present in misinformation campaigns ranging from tobacco companies' denial in the 1950s that smoking causes lung cancer to today's anti-vaxxers. He describes attempts to use his persuasive powers as a philosopher to convert Flat Earthers; surprising discussions with coal miners; and conversations with a scientist friend about genetically modified organisms in food. McIntyre offers tools and techniques for communicating the truth and values of science, emphasizing that the most important way to reach science deniers is to talk to them calmly and respectfully--to put ourselves out there, and meet them face to face.

bill nye wikipedia: *The Origins of the Anglo-Saxons* Jean Manco, 2022-11-30 Who are the English? Their language and culture have had an impact on the modern world out of all proportion to the size of their homeland. But what do we really understand about their ancestry? Traditionally they have been seen as the descendants of those Germanic peoples who poured into Britain after the Roman legions departed, today known as the Anglo-Saxons. Alternative interpretations have questioned this picture, or suggested complications. At last, the astonishing progress made in extracting and analysing ancient DNA means that theories can be tested empirically, shedding new light on the movement and migrations of peoples in the past. Skillfully and accessibly blending together results from this cutting-edge DNA technology with new research from archaeology and linguistics, Jean Manco reveals a long and adventurous journey before a word of English was spoken. Going beyond a narrow focus on the Anglo-Saxon period, she probes into the deep origins of the Germani and their kin, and extends the story to the language of Shakespeare, taken to the first British colony in America. The result is an exciting new history of the English people, and a ground-breaking analysis of their development.

bill nye wikipedia: Invoking the Beyond: Paul D. Collins, Phillip D. Collins, 2020-11-22 The Gnostic revival of the Enlightenment witnessed the erection of what could be called the "Kantian Rift," an epistemological barrier between external reality and the mind of the percipient. Arbitrarily proclaimed by German philosopher Immanuel Kant, this barrier rendered the world as a terra incognita. Suddenly, the world "out there" was deemed imperceptible and unknowable. In addition to the outer world, the cherished metaphysical certainties of antiquity—the soul, a transcendent order, and God—swiftly evaporated. The way was paved for a new set of modern mythmakers who would populate the world "out there" with their own surrogates for the Divine. Collectively, these

surrogates could be referred to as the Beyond because they epistemologically and ontologically overwhelm humanity. In recent years, the Beyond has been invoked by theoreticians, literary figures, intelligence circles, and deep state operatives who share some variant of a technocratic vision for the world. In turn, these mythmakers have either directly or indirectly served elitist interests that have been working toward the establishment of a global government and the creation of a New Man. Their hegemony has been legitimized through the invocation of a wrathful earth goddess, a technological Singularity, a superweapon, and extraterrestrial “gods.” All of these are merely masks for the same counterfeit divinity... the Beyond.
