caplan health institute patient reviews: Primary health care and continuous quality improvement Alison Laycock, Ross Bailie, Lynette O'Donoghue, 2025-06-01 For most people, the main point of access to the health system is through primary health care (PHC). The fundamental premise of primary health care is that all people, everywhere, have the right to receive the appropriate care in their community. Primary health care attends to the majority of a person's health needs throughout their lifetime, including physical, mental and social wellbeing. PHC is people-centred rather than disease-centred. It is a whole-of-society approach that includes health promotion, disease prevention, treatment, rehabilitation and palliative care. Primary health care and continuous quality improvement: An evidence-based guide provides an accessible contemporary guide on implementing continuous quality improvement (CQI) in PHC settings. The authors draw together two decades of practical experience and established leadership in Aboriginal and Torres Strait Islander health in Australia to provide guidance for health services and their staff, policymakers, researchers, funders and support organisations in an international context. Primary health care and continuous quality improvement provides an in-depth understanding of how CQI can be used to strengthen health systems by: identifying core concepts underpinning CQI in PHC and how CQI can improve health care quality, health equity and population health; explaining how CQI data is used in a comprehensive approach to PHC to measure quality, and how data is generated and used for improving care; describing CQI tools and techniques used by PHC teams; offering guidance in interpreting data and addressing variation in care quality; providing case studies in maternal health, children's health, mental health and other areas, to describe the application of CQI to improve clinical care; guiding practitioners on how to collaborate and build data systems for CQI, and strengthen links between communities and PHC services. Continuous quality improvement is everybody's business, and Primary health care and continuous quality improvement explains the strategic use of CQI at different levels of the health system and across sectors to achieve and sustain large-scale health improvement.

caplan health institute patient reviews: Women's Rights and Religious Law Fareda Banda, Lisa Fishbayn Joffe, 2016-02-12 The three Abrahamic faiths have dominated religious conversations for millennia but the relations between state and religion are in a constant state of flux. This relationship may be configured in a number of ways. Religious norms may be enforced by the state as part of a regime of personal law or, conversely, religious norms may be formally relegated to the private sphere but can be brought into the legal realm through the private acts of individuals. Enhanced recognition of religious tribunals or religious doctrines by civil courts may create a hybrid of these two models. One of the major issues in the reconciliation of changing civic ideals with religious tenets is gender equality, and this is an ongoing challenge in both domestic and international affairs. Examining this conflict within the context of a range of issues including marriage and divorce, violence against women and children, and women's political participation, this collection brings together a discussion of the Abrahamic religions to examine the role of religion in the struggle for women's equality around the world. The book encompasses both theory and practical examples of how law can be used to negotiate between claims for gender equality and the right to religion. It engages with international and regional human rights norms and also national considerations within countries. This book will be of great relevance to scholars and policy makers with an interest in law and religion, gender studies and human rights law.

caplan health institute patient reviews: Disaster Research and the Second Environmental Crisis James Kendra, Scott G. Knowles, Tricia Wachtendorf, 2019-04-04 The 50th anniversary of the Disaster Research Center of the University of Delaware provoked a discussion of the field's background, its accomplishments, and its future directions. Participants representing many disciplines brought new methods to bear on perennial problems relevant to effective disaster management and policy formation. However, new concerns were raised, stemming from the fact that we live today in a globally unfolding environmental crisis every bit as pressing and worrisome as

that of the 1960s when the Disaster Research center was founded. This volume brings together ideas of participants from that workshop as well as other contributors. Topics include: the history and evolution of disaster research, innovations in disaster management, disaster policy, and ethical considerations of disaster research. Readers interested in science and technology, public policy, community action, and the evolution of the social sciences will find much of interest in this collection.
