brigrance kindergarten readiness test: Moving Critical Literacies Forward Jessica Pandya, JuliAnna Ávila, 2013-11-26 Taking the pulse of current efforts to do—and, in some cases, undo—critical literacy, this volume explores and critiques its implementation in learning contexts around the globe. An impressive set of international authors offer examples of productive critical literacy practices in and out of schools, address the tensions and gaps between these practices and educational policies, and attempt to forecast the future for critical literacy as a movement in the changing global educational policy landscape. This collection is unique in presenting the recent work of luminaries such as Allan Luke and Hilary Janks alongside relative newcomers who use innovative approaches and arguments to reinvigorate and redefine critical practice. It is time for this

brigance kindergarten readiness test: Ready for What? M. Elizabeth Graue, 1993-01-01 This book looks at readiness from a different perspective, arguing that we must move away from the readiness-as-child characteristic so prevalent in education and the popular press. Instead, readiness is explained as an idea constructed by parents, teachers, and children as they interact in their neighborhoods and communities. Graue describes three communities in the same school district: a middle-class, suburban town of professionals; a rural, working-class community; and a group of Hispanic, working-class families making their way through their children's kindergarten experiences. In each setting, the local meaning of readiness is the underlying theme in the actions taken by parents and their attitudes about their children's first public school experience.

brigance kindergarten readiness test: *Challenging the School Readiness Agenda in Early Childhood Education* Miriam B. Tager, 2017-03-27 Challenging the normative paradigm that school readiness is a positive and necessary objective for all young children, this book asserts that the concept is a deficit-based practice that fosters the continuation of discriminatory classifications. Tager draws on findings of a qualitative study to reveal how the neoliberal agenda of school reform based on high-stakes testing sorts and labels children as non-ready, affecting their overall schooling careers. Tager reflects critically on the relationship between race and school readiness, showing how the resulting exclusionary measures perpetuate the marginalization of low-income Black children from an early age. Disrupting expected notions of readiness is imperative to ending practices of structural classism and racism in early childhood education.
