Who formulated Charles's Law?

Charles's Law is named after Jacques Charles, a French scientist who first formulated the relationship between gas volume and temperature in the late 18th century.

What is the mathematical expression of Charles's Law?

Charles's Law can be expressed as $V_1/T_1 = V_2/T_2$, where V is volume and T is temperature in kelvins.

How is Charles's Law applied in real life?

Charles's Law explains phenomena such as the expansion of hot air balloons and the behavior of gases in car engines when heated.

What are the conditions required for Charles's Law to be valid?

Charles's Law applies when the amount of gas and the pressure are kept constant while the temperature changes.

How does Charles's Law relate to the ideal gas law?

Charles's Law is a specific case of the ideal gas law where the pressure and quantity of gas are constant, showing the direct relationship between volume and temperature.

Can Charles's Law be applied to liquids and solids?

No, Charles's Law specifically describes the behavior of gases; liquids and solids do not follow this law because their volumes do not change significantly with temperature.
