

dr gundry recommended foods

dr gundry recommended foods emphasize a unique approach to nutrition centered around improving gut health, reducing inflammation, and promoting overall wellness. Dr. Steven Gundry, a former cardiac surgeon, developed a dietary philosophy that focuses on eliminating harmful lectins—proteins found in many plants that may contribute to chronic inflammation and other health issues. This article explores the core elements of dr gundry recommended foods, highlighting which foods to embrace and which to avoid for optimal health. It also details the benefits of incorporating these foods into daily meals and how they align with Dr. Gundry's principles for longevity and vitality. Understanding these food recommendations can empower individuals to make smarter dietary choices and potentially reduce the risk of common ailments. The following sections will cover the key categories of dr gundry recommended foods, including vegetables, fruits, proteins, fats, and beverages.

Understanding Dr. Gundry's Dietary Philosophy

Dr. Gundry's nutritional recommendations revolve around the concept of limiting lectins, which are naturally occurring proteins found in many plants. According to his research, lectins can disrupt gut health by promoting inflammation and compromising the intestinal lining. The dr gundry recommended foods focus on minimizing lectin intake while maximizing nutrient density and promoting beneficial gut bacteria. This philosophy encourages the consumption of specific low-lectin foods that support immune function and metabolic health. The overall goal is to reduce chronic inflammation, improve digestion, and enhance energy levels.

The Role of Lectins

Lectins are a type of protein that can bind to carbohydrates and are present in a variety of foods such as grains, legumes, and nightshade vegetables. Dr. Gundry recommends avoiding high-lectin foods because they may trigger immune responses and cause gut permeability issues, often referred to as "leaky gut." By focusing on dr gundry recommended foods, individuals can limit exposure to these potentially harmful compounds

and support a healthier gut environment.

Principles Behind Food Selection

The selection of dr gundry recommended foods is based on their lectin content, nutrient profile, and overall impact on gut microbiota. Foods that are naturally low in lectins, rich in antioxidants, and anti-inflammatory are prioritized. This includes many leafy greens, certain fruits, wild-caught fish, and healthy fats. The diet also emphasizes organic and minimally processed foods to avoid additives and pesticides that may further disrupt gut health.

Dr. Gundry Recommended Vegetables

Vegetables form a cornerstone of dr gundry recommended foods, especially those low in lectins and high in fiber and antioxidants. These vegetables help nourish the gut microbiome and reduce inflammation. Leafy greens and cruciferous vegetables are particularly valued for their nutrient density and health benefits.

Leafy Greens and Cruciferous Vegetables

Leafy greens such as kale, spinach, and Swiss chard are encouraged due to their low lectin content and abundance of vitamins and minerals. Cruciferous vegetables like broccoli, cauliflower, and Brussels sprouts are also recommended for their cancer-fighting compounds and fiber content, which supports digestive health.

Other Low-Lectin Vegetables

Additional vegetables endorsed in dr gundry recommended foods include asparagus, artichokes, celery, and mushrooms. These vegetables provide diverse phytonutrients and support detoxification pathways in the body without increasing lectin exposure.

- Kale
- Spinach
- Swiss chard
- Broccoli
- Cauliflower
- Brussels sprouts
- Asparagus

- Artichokes
- Celery
- Mushrooms (especially shiitake and maitake)

Fruits Endorsed by Dr. Gundry

Fruits in dr gundry recommended foods are carefully selected for their low lectin content and high antioxidant levels. Berries and certain tropical fruits are favored due to their ability to combat oxidative stress and inflammation.

Preferred Berries

Blueberries, strawberries, and raspberries are among the fruits strongly recommended. They are rich in polyphenols and vitamins that help protect cells from damage and support cardiovascular health.

Other Recommended Fruits

Avocados, olives, and select melons such as cantaloupe are also part of dr gundry recommended foods. These fruits provide healthy fats, fiber, and essential nutrients without contributing to lectin overload.

- Blueberries
- Strawberries
- Raspberries
- Avocados
- Olives
- Cantaloupe

Healthy Proteins According to Dr. Gundry

Protein sources in dr gundry recommended foods focus on quality, sustainability, and minimal lectin content. Animal proteins are preferred when sourced from wild or grass-fed animals, while certain plant-based proteins are selectively included.

Animal-Based Proteins

Wild-caught fish such as salmon, sardines, and cod are highly recommended due to their omega-3 fatty acids and low contaminant levels. Grass-fed beef, pasture-raised poultry, and pasture-raised eggs are also endorsed for their superior nutrient profiles.

Plant-Based Protein Options

While many legumes are high in lectins and discouraged, Dr. Gundry recommends limited consumption of peeled and pressure-cooked legumes like lentils and chickpeas to reduce lectin content. Additionally, nuts such as macadamias, walnuts, and pecans are included for their protein, healthy fats, and antioxidants.

- Wild-caught salmon
- Sardines
- Grass-fed beef
- Pasture-raised chicken
- Pasture-raised eggs
- Macadamia nuts
- Walnuts
- Pecans
- Pressure-cooked lentils
- Pressure-cooked chickpeas

Fats and Oils Recommended by Dr. Gundry

Healthy fats constitute an essential part of Dr. Gundry recommended foods, especially those that support heart and brain health. Emphasis is placed on monounsaturated and omega-3 fats while avoiding inflammatory omega-6 oils.

Preferred Fats and Oils

Extra virgin olive oil is a primary fat source due to its antioxidant-rich profile and cardiovascular benefits. Avocado oil and coconut oil are also encouraged for cooking and dressings. Additionally, omega-3 fatty acids from fish oil or algae supplements complement

these healthy fats.

Fats to Avoid

Dr. Gundry advises against consuming vegetable oils high in omega-6 fatty acids, such as soybean, corn, and sunflower oils, which may promote inflammation and oxidative stress.

- Extra virgin olive oil
- Avocado oil
- Coconut oil
- Fish oil (omega-3)
- Algae-based omega-3 supplements

Additional Food and Beverage Recommendations

Beyond the core food groups, Dr. Gundry recommended foods include specific beverages and condiments that align with his dietary principles. These items support hydration, digestion, and antioxidant intake.

Beverages

Green tea and herbal teas provide antioxidants and promote metabolic health. Coffee is permitted in moderation, preferably organic and without added sugars. Bone broth is recommended for its collagen content and gut-healing properties.

Condiments and Spices

Herbs and spices such as turmeric, ginger, and rosemary are encouraged for their anti-inflammatory effects. Sea salt and raw apple cider vinegar are also included to enhance flavor without introducing harmful additives.

- Green tea
- Herbal teas
- Coffee (organic, moderate)
- Bone broth

- Turmeric
- Ginger
- Rosemary
- Raw apple cider vinegar
- Sea salt

Media, 2022-03-04T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 Fatigue you can't shake isn't a sign of aging or being busy. It's not a natural part of the human experience, and it doesn't have to be lived with. #2 Fatigue is a very common symptom among modern patients. It is the result of a lack of energy, and it can dull the mind and dampen the mood. It is often accompanied by other symptoms, such as malaise, that are also common symptoms of illness. #3 Despite living in a time when we are eating more energy-dense fuel than ever before, we are feeling more energy deprived than ever. We're living a much less physically demanding lifestyle than our ancestors, yet we're feeling physically drained. #4 Modern medicine has a difficult time treating symptoms that are not caused by a physical illness. This is because doctors are often forced to see a large number of patients, and they are advised to come back when things are bad enough to warrant medication or surgery.

dr gundry recommended foods: Summary of Dr. Gundry's Diet Evolution Alexander Cooper, 2021-03-20 Summary of Dr. Gundry's Diet Evolution This book discusses the Diet Evolution, which consists of three phases. What's great about this diet plan is that it teaches you a new routine and habits along with exercise. It is not just a diet but also a way of life. The diet evolution aims to hinder the "killer genes" from activating so that you will have a long and healthy life. Also, after three months into the program, you will have a new set of healthy cells. It's like being an entirely different person. Phase 1 or the Teardown phase encourages you to lose weight by increasing the intake of greens and opting for meat that comes from plant-eating animals only. Animals that eat plants act as mediators so that you can gain plant nutrients and proteins. Phase 2 or the Restoration phase requires that you eliminate the mediator and concentrate on the greens. It's like turning vegan. You are also recommended to take supplements to compensate for the other nutrients and to gain muscle mass. Nuts, salads, and smoothies are your main foods. Phase 2 is where you also need to exercise. Either you go long distances in a slow and steady motion, or you go for short distances and sprint quickly. He also recommends a few minutes of strength training to increase muscle mass and tone. The longevity phase or phase three is not for everyone. This is because most of the foods you eat will be raw. This is how your ancestors ate their food and is the secret to long life. Not a lot of people like eating raw foods so this may not be for you. For people who are hesitant and don't know where to start, there is a meal plan and some recipes suited for the phase that you are in. You don't have to worry about what to eat. Another thing is that the menu in phase 1 can be recycled in phase 2 with slight changes. This means that you don't have to adjust again to the new food. Your eating habits will remain the same, and you'll get used to it. Most of the diet evolution "Club members" were former patients who decided to change their lifestyle. Word-of-mouth is a successful method of advertising this diet plan. More people approach very eager to try this diet strategy mainly due to its successes. There were insulin-resistant patients who've had to deal with obesity for so long. There were also surgery patients with hip replacements due to obesity. In this diet evolution, you are motivated to become a new person inside and out. Your lifestyle will change, and you will become healthier, better-looking, and feel good about it. Diet Evolution certainly aims to make people healthier and live longer. dr gundry recommended foods: 9 Transformational Lessons I Learned From Dr. Gundry's Diet Evolution John Korsh, 2025-06-29 9 Transformational Lessons I Learned From Dr. Gundry's Diet Evolution: Inspired by Dr. Steven Gundry (Personal Reflection) – How to Heal Your Gut and Reverse Aging In the spring of 2019, I sat in a quiet café just off Lexington Avenue, idly flipping through a book a friend had insisted I read. It was one of those overly confident health books—full of promises, suspicious before-and-after photos, and more leafy greens than a farmer's market. But this one was different. Titled Dr. Gundry's Diet Evolution, it didn't try to scare me with charts or shame me with beach-ready body ideals. Instead, it told a story. Not just the story of food, but the story of evolution. Of how our bodies—ancient machines in modern chaos—are rebelling against the very world we've built around them. It's a strange thing to realize that the food you eat—the thing you've trusted since birth to nourish you—might also be the thing quietly killing you. Stranger still is the idea that the way to reverse the clock, to reclaim your energy, your focus, even your skin, lies not in the clinic or the cosmetic aisle but in the gut. That hidden ecosystem inside you, which you've ignored most of your life, might be the key to turning everything around. Grab a copy of this book now!

dr gundry recommended foods: *The Future of Medicine and Health Care* Dr. Walter J. Urban, 2019-06-17 Some doctors have died because they went against “the powers that be” in modern medicine. I am not afraid. The evolution of alternative health care will continue until it becomes mainstream... with your help. This book can help you stop suffering the symptoms of disease and actually save your life. It will lead you to the truth about the limitations of doctors, as well as their benefits. Needless suffering and deaths happen due to inadequate practices regarding prescription drugs, misdiagnoses, and improper treatment. Holistic health care teams are the future of medicine. One professional does not have all the answers about the cause, diagnosis and treatment of your condition. Individual health care professionals tend to give patients the idea that they can cure disease. The reality is that no doctor can do what the body does itself. ONLY THE BODY HEALS ITSELF. In order to do that, your body needs the right tools. This book will help point you in the right direction.
