dr doe specialist: *It's Enough to Make You Sick* Jeffrey M. Lobosky, 2012-04-16 More and more Americans are finding themselves without health insurance or with coverage that is so inadequate they face financial ruin in the event they actually get sick. So they go without. Their children don't receive their immunizations. They allow that worrisome lump in their breast to grow so large that by the time the cancer has been detected it has spread beyond the ability to cure. Seniors can't pay their heating bills or sustain adequate nutrition as the rising cost of their prescription drugs compels them to make difficult choices. Just how did our system become so dysfunctional and who is responsible? This book will tell you. Too often, discussions on the health care crisis focus a myopic lens on the usual suspects. We are all quick to point a finger at insurance companies who place profit over patients or the pharmaceutical industry that extorts obscene amounts of American dollars for the same drugs that cost 50 to 75 percent less when we cross our borders north or south. We blame trial lawyers who practice with a lottery mentality that protects neither the patient from negligent care nor good physicians from frivolous lawsuits. But the culpability for our crisis is more widespread. Hospitals have devolved from not-for-profit, community-based institutions to large, national for-profit chains. Doctors no longer spend time with their patients but instead rely on expensive, and often times, unnecessary tests and use physician extenders (such as P.A.s and nurse practitioners) to move patients along like cars on an assembly line. Politicians pass well-meaning laws as a knee-jerk reaction to a specific issue without understanding the unexpected consequences, which frequently only exacerbate the problem. And they operate in a system of special interests and influence peddling that all but assures the failure of any meaningful health care reform. And while we all demand high quality health care, few actually take preventative measures that could keep them out of the system they deride. This is a public that eats, drinks, and smokes to excess yet exercises far too seldom. *It's Enough to Make You Sick: The Failure of American Health Care and a Prescription for the Cure* discusses how things got so bad, tracking the origins of the U.S. health care system and illuminating how each of the important components have evolved over the last century. Lobosky explains how the varied special interests have conspired to create a system that is by far the costliest in the world and yet is mediocre at best in providing quality care. He explores the various culprits and how each has contributed to the sad state of affairs. The Patient Protection and Affordable Care Act is dissected in detail, and a practical and compassionate blueprint for meaningful reform is offered to remedy the situation. This book is a must read for every American who is frustrated and disheartened by the recent health care battles, for every American who suffers through the best health care system in the world, and for every American who wants to assure quality care for themselves and those they love.

dr doe specialist: *German Sports, Doping, and Politics* Michael Krüger, Christian Becker, Stefan Nielsen, 2015-04-09 In the Cold War era, sport was not just a symbol of the power and strength of a nation-state, but of certain ideological systems of politics. With the pressure for athletes to succeed at its zenith, many East German athletes were given anabolic steroids by their country's own sport federation. While doping in East Germany has been intensely researched in the past decades, the state of West German athletics during this time has remained largely a mystery. In fact, doping was a common practice on both sides of the Iron Curtain. But how many athletes were involved? And who knew about these practices? In order to answer these questions, the Federal Institute for Sport Science in Germany supported a research project to shed light on the other, West German side of doping history. Based on analyses of authentic documents and archives, *German Sports, Doping and Politics: A History of Performance Enhancement* is a unique study spanning from 1950-2007. Translated from its original German, and supplemented with new material written especially for an international audience, this innovative book addresses many important questions about a topic with worldwide implications. Part I deals with the history of doping in the post-war period of the 1950s and '60s; Part II focuses on the apex of doping, as well as the beginnings of the anti-doping movement; and Part III considers the development of doping since the Reunification and the foundation of the World Anti-Doping Agency and the National Anti-Doping Agency in Germany. Written for a global audience, *German Sports, Doping, and Politics* explains and reveals the truly remarkable processes of doping and anti-doping that have evolved since the Cold War. While sports historians will find this book of great interest, it is also a significant study for anyone who wants to look beyond the surface of sports and doping as reported by the media.

dr doe specialist: *Optimal Design of Experiments* Peter Goos, Bradley Jones, 2011-06-28 This is an engaging and informative book on the modern practice of experimental design. The authors' writing style is entertaining, the consulting dialogs are extremely enjoyable, and the technical material is presented brilliantly but not overwhelmingly. The book is a joy to read. Everyone who practices or teaches DOE should read this book. - Douglas C. Montgomery, Regents Professor, Department of Industrial Engineering, Arizona State University It's been said: 'Design for the experiment, don't experiment for the design.' This book ably demonstrates this notion by showing how tailor-made, optimal designs can be effectively employed to meet a client's actual needs. It should be required reading for anyone interested in using the design of experiments in industrial settings. —Christopher J. Nachtsheim, Frank A Donaldson Chair in Operations Management, Carlson School of Management, University of Minnesota This book demonstrates the utility of the computer-aided optimal design approach using real industrial examples. These examples address questions such as the following: How can I do screening inexpensively if I have dozens of factors to investigate? What can I do if I have day-to-day variability and I can only perform 3 runs a day? How can I do RSM cost effectively if I have categorical factors? How can I design and analyze experiments when there is a factor that can only be changed a few times over the study? How can I include both ingredients in a mixture and processing factors in the same study? How can I design an experiment if there are many factor combinations that are impossible to run? How can I make sure that a time trend due to warming up of equipment does not affect the conclusions from a study? How can I take into account batch information in when designing experiments involving multiple batches? How can I add runs to a botched experiment to resolve ambiguities? While answering these questions the book also shows how to evaluate and compare designs. This allows researchers to make sensible trade-offs between the cost of experimentation and the amount of information they obtain.

Simon, 2009-06-30 For the past 60 years, the American Board of Professional Psychology (ABPP) has been the premier credentialing agency for psychologists. ABPP is increasingly recognized as a highly valuable standard of specialty competency through the board certification process. For specialty recognition, some jurisdictions require ABPP certification, with more states getting involved each year. Additionally, there is increasing recognition of the importance of the ABPP credential by employers such as hospitals and health service systems, and organizations such as the US Public Health Service, the US Department of Defense, and the Department of Veteran Affairs. This edited book provides a comprehensive description and hands-on, practical guide for individuals seeking certification from any one of the 13 specialty boards of the American Board of Professional Psychology. The book contains answers to frequent areas of inquiry and questions posed by potential candidates. In addition to providing a brief description of the history and mission of ABPP, the book offers step-by-step information concerning the where, what, and how of the board certification process. Finally, never-before offered information is provided, such as what pitfalls to avoid, and how to get further involved in the profession as a board certified psychologist.

dr doe specialist: ETHICS IN FORENSIC SCIENCE AND MEDICINE Melvin A. Shiffman, 1999-01-01 This book provides an invaluable source of information for physicians and forensic scientists who are involved as expert witnesses in civil and criminal litigation. Manipulative and opportunistic lawyers can lead an unsuspecting scientific expert into a potentially dangerous situation that could result in personal embarrassment, professional organizational disciplinary action, or even formal legal charges. Areas of ethical behavior are identified for the forensic witness concerning their relationships with attorneys, other experts, and litigants. Specific topics include: (1) selection, regulation, and duties of the forensic expert; (2) litigation and legal matters, unethical conduct, fees, advertising, and publicity; (3) oral testimony, the expert-client relationship, confidentiality, contractual arrangements, scientific and demonstrative evidence; (4) practical issues for attorney preparation and the qualities and attitudes of medical experts. In addition, forensic aspects of alcoholism and drug abuse plus the use and abuse of forensic sciences are discussed, with an entire chapter devoted to the O. J. Simpson case. Finally, the book thoroughly emphasizes the importance of the Ethical Medicolegal Report and the Code of Professional and Ethical Conduct.
