emma holliday md: *Radiation Oncology: A Question-Based Review* Borislav Hristov, Steven H. Lin, John P. Christodouleas, 2018-08-08 Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Known among radiation oncology residents as the green book, *Radiation Oncology: A Question-Based Review* is a must-have learning tool for trainees and physicians who want to strengthen their long-term command of radiation oncology. The updated 3rd Edition reflects state-of-the-art advances in the field, with revised questions and answers, new professional guidelines, and new annual content updates for the eBook.

emma holliday md: *Career Development in Academic Radiation Oncology* Ravi A. Chandra, Neha Vapiwala, Charles R. Thomas Jr., 2021-05-25 This book offers comprehensive career development advice for professionals in radiation oncology. While numerous texts have been published to advise medical students on entry into the specialty, and to guide residents and junior faculty with exam preparation, there remains a need for a comprehensive resource that covers topics pertinent to a successful career within radiation oncology. This text has been edited and written by leading experts in the field, and offers multiple unique vantage points. This work is divided into five sections covering career planning, applying to faculty positions, early career development, mid and senior career considerations, and contextual issues. Throughout the text, authors balance “nuts and bolts” (e.g., preparing your CV and evaluating a contract) with big picture considerations. Each chapter is written concisely, yet comprehensively, from the vantage point of a mentor advising a mentee; questions to review with local mentors and additional reading suggestions are also provided. Issues of workforce disparities, conscious and unconscious bias, work-life equilibrium, and interpersonal conflict, and how these may impact one’s career path, are also closely addressed. While the work is primarily targeted to those pursuing career paths within academic medicine, there is also distinct value and tailored content for trainees and radiation oncologists practicing in hospital-based, hybrid or community settings. In a period of rapid change in the healthcare sector and cancer care more specifically, this book will serve as the premier reference for those pursuing an independent career in radiation oncology.

emma holliday md: **Pocket Radiation Oncology** Chad Tang, Ahsan Farooqi, 2024-10-07 Designed for portability and quick reference, *Pocket Radiation Oncology*, 2nd Edition, provides the essential information needed by practitioners and trainees on a daily basis (and for oral boards!). Edited by Drs. Chad Tang and Ahsan Farooqi, and written by physicians at the MD Anderson Cancer Center, this fully updated volume provides a concise and focused review of all areas of radiation oncology in one easy-to-navigate, pocket-sized notebook.

emma holliday md: *Primary and Metastatic Liver Tumors* Kenneth Cardona, Shishir K. Maithel, 2018-10-01 The incidence of primary and metastatic liver tumors is rising and the therapeutic armamentarium for these tumors is expanding at a rapid pace. Surgery remains the primary treatment modality for these tumors. With improvements in our perioperative management and operative techniques a larger proportion of patients are able to undergo potentially curative liver surgery. In addition, indications and criteria for liver transplantation for both primary and metastatic liver tumors are constantly expanding. Unfortunately, many patients are not amenable to surgical resection or liver transplantation and therefore alternative liver-directed therapies are routinely being implemented as part of complex multidisciplinary treatment models. However, these

models are continually evolving as these regional therapeutic options continue to expand. New embolization agents and techniques, as well as, improvements in radiation delivery, are all evolving in the background of improvement in systemic and targeted therapy options for these tumors. This book provides a comprehensive, state-of-the art review of the current state of liver-directed therapy for malignant liver tumors. The book will serve as a valuable resource for not only surgeons and clinicians but for researchers with an interest in malignant liver tumors. The book focuses on the therapeutic approach to primary and metastatic tumors providing an up-to-date review on surgical liver anatomy and new imaging techniques as well as patient selection and technical consideration for resection and transplantation. In addition, the book provides new insight into novel and evolving therapies in the areas of transarterial therapy such as: (i) bland embolization, (ii) chemoembolization, and (iii) radioembolization; as well as new radiation techniques including SBRT and proton therapy. Furthermore, the expanding role of hepatic artery infusion therapy in primary malignant tumors is highlighted. Finally, integration of all these regional therapy options with upcoming and evolving systemic and targeted therapy regimens are integrated and discussed. This book will serve as a very useful resource for clinicians and researchers managing and treating patients with these challenging malignancies. It provides a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All chapters are written by experts in their fields and include the most up to date scientific and clinical information.
