europaean society of cardiology fellowships: Textbook of Catheter-Based Cardiovascular Interventions Peter Lanzer, 2018-04-30 This book is a fully updated and revised second edition of a

highly successful text in which a new concept of knowledge mining, based on explication and transfer of interventional knowledge of experts, has been implemented. The dedicated training program that is set out will serve the needs of all interventional operators, whether cardiologists, vascular surgeons, vascular specialists, or radiologists, enabling them to achieve a consistent expert level across the entire broad spectrum of catheter-based interventions. Operator skills – and in particular decision-making and strategic skills – are the most critical factors for the outcome of catheter-based cardiovascular interventions. Currently, such skills are commonly developed by the empirical trial and error method only. The explicit teaching, training, and learning approach adopted in this book permits the rapid transfer of interventional knowledge and enables individual operators to negotiate steep learning curves and acquire complex skills in a highly efficient manner. It will thereby offer invaluable assistance in meeting successfully the challenges of modern cardiovascular care.

europaean society of cardiology fellowships: Myocardial Infarction Burak Pamukçu, 2019-01-03 Atherosclerotic cardiovascular disease is still the most common cause of death among adults. Its prevalence is increasing in developing countries and despite all advances in both diagnostic tools and treatment modalities, it is still very common in the developed world. Obesity, diabetes mellitus, hypercholesterolemia and overuse of dietary salt play a pivotal role in increased cardiovascular morbidity and mortality worldwide. Current clinical efforts are mainly focused on the diagnosis and treatment of myocardial infarction. In this book, we provide epidemiological data on myocardial infarction and atherosclerotic cardiovascular disease, current diagnostic biochemical tests and management strategies. A specific patient group, children, experiencing myocardial infarction are also addressed. Current advances in the management of myocardial infarction have decreased the morbidity and mortality from atherosclerotic cardiovascular disease and especially myocardial infarction; however, more can be achieved by the prevention of atherosclerotic processes via focusing on the early stages of the disease.
