**financial domains: Civil Capacities in Clinical Neuropsychology** George J. Demakis, 2012-10-15 Clinical neuropsychologists are increasingly involved in the evaluation of civil capacities and are in demand by other professionals, particularly attorneys and judges, to assist their decision-making about these sometimes complex issues. While there has been some neuropsychological research in this area, this has not been assembled into a single volume nor have practice recommendations been provided. This volume fills these gaps. The first part of this volume reviews and synthesizes the research literature on neuropsychological aspects of civil capacities. The specific capacities addressed include driving, financial and healthcare decision-making, testamentary (i.e., will-making) capacity, and personal care and independence. Each chapter addresses relevant background issues, conceptual/theoretical advances, and empirical findings. The chapters also include an illustrative case study that demonstrates how the authors (each expert in the various areas) evaluated and conceptualized the case. Each chapter is written from an evidence-based perspective and, where appropriate, uses research to inform practice recommendations. The second part of this volume provides recommendations to practitioners on how to conduct civil capacity evaluations that utilize neuropsychological assessment. There are chapters on an evaluative framework for the assessment, capacity test selection and psychometric issues, working with other data sources besides testing (e.g., collateral interviews), best practices in report-writing and testifying, as well as common ethical issues in such cases. Throughout, these chapters provide practical how to advice to improve neuropsychological practice and consulting in civil capacity cases. In addition to these chapters, there is a chapter written by legal consumers of psychological reports. This chapter offers a wealth of useful information and recommendations that, if followed, will further serve to advance psychological report-writing and consultation in civil capacity evaluations.

**financial domains: *Financial Cultures and Crisis Dynamics*** Bob Jessop, Brigitte Young, Christoph Scherrer, 2014-10-17 The recent financial crisis exposed both a naïve faith in mathematical models to manage risk and a crude culture of greed that embraces risk. This book explores cultures of finance in sites such as corporate governance, hedge funds, central banks, the City of London and Wall Street, and small and medium enterprises. It uses different methods to explore these cultures and their interaction with different financial orders to improve our understanding of financial crisis dynamics. The introduction identifies types of cultural turn in studies of finance. Part I outlines relevant research methods, including comparison of national cultures viewed as independent variables, cultural political economy, and critical discourse and narrative policy analysis. Part II examines different institutional cultures of finance and the cult of entrepreneurship. Part III offers historical, comparative, and contemporary analyses of financial regimes and their significance for crisis dynamics. Part IV explores organizational cultures, modes of calculation, and financial practices and how they shape economic performance and guide crisis management. Part V considers crisis construals and responses in the European Union and China. This book's great strength is its multi-faceted approach to cultures of finance. Contributors deploy the cultural turn creatively to enhance comparative and historical analysis of financial regimes, institutions, organizations, and practices as well as their roles in crisis generation, construal, and management. Developing different paradigms and methods and elaborating diverse case studies, the authors illustrate not only how and why 'culture matters' but also how its significance is shaped by different financial regimes and contexts.
