fast food race: Fast Food Vindication Lisa Tillinger Johansen (MS, RD.), 2012 For years, dozens of books, documentaries, and magazine articles have targeted the fast food industry as the cause for many of society's ills, ranging from the obesity epidemic to the proliferation of dead-end

jobs. Now, hospital dietitian Lisa Johansen makes the bold case that the fast food industry is actually a positive force in society. Johansen takes the reader from the industry's scrappy, entrepreneurial beginnings to its emergence as a global business generating hundreds of billions of dollars annually. Far from a blight on society, the fast food industry has distinguished itself by providing a product that meets high standards of quality and safety, often healthier than meals served at home and in sit-down restaurants. The myth of the McJob is debunked by true-life cases of corporate titans who succeeded by virtue of the fast-food chains' practice of promoting from within. And, relying on her years of counseling patients at one of the nation's largest health networks, Johansen shows the reader just how easily fast food can be incorporated into a healthy lifestyle. Lively and informative, FAST FOOD VINDICATION destroys the media myths and paints the true picture of an industry that touches the lives of millions.

fast food race: Race, Ethnicity, and Consumption Patricia Banks, 2020-07-08 Race, Ethnicity, and Consumption: A Sociological View looks at the central concerns of consumer culture through the lens of race and ethnicity. Each chapter illustrates the connections between race, ethnicity, and consumption by focusing on a specific theme: identity, crossing cultures, marketing and advertising, neighborhoods, discrimination, and social activism. By exploring issues such as multicultural marketing, cultural appropriation, consumer racial profiling, urban food deserts, and racialized political consumerism, students, scholars, and other curious readers will gain insight on the ways that racial and ethnic boundaries shape, and are shaped by, consumption. This book goes beyond the typical treatments of race and ethnicity in introductory texts on consumption by not only providing a comprehensive overview of the major theories and concepts that sociologists use to make sense of consumption, race, and ethnicity, but also by examining these themes within distinctly contemporary contexts such as digital platforms and activism. Documenting the complexities and contradictions within consumer culture, Race, Ethnicity, and Consumption is an excellent text for sociology courses on consumers and consumption, race and ethnicity, the economy, and inequality. It will also be an informative resource for courses on consumer culture in the broader social sciences, marketing, and the humanities.

fast food race: Taking Food Public Psyche Williams Forson, Carole Counihan, 2013-09-13 The field of food studies has been growing rapidly over the last thirty years and has exploded since the turn of the millennium. Scholars from an array of disciplines have trained fresh theoretical and methodological approaches onto new dimensions of the human relationship to food. This anthology capitalizes on this particular cultural moment to bring to the fore recent scholarship that focuses on innovative ways people are recasting food in public spaces to challenge hegemonic practices and meanings. Organized into five interrelated sections on food production – consumption, performance, Diasporas, and activism – articles aim to provide new perspectives on the changing meanings and uses of food in the twenty-first century.

fast food race: Feeding Cities Christopher Bosso, 2016-11-10 There is enormous current interest in urban food systems, with a wide array of policies and initiatives intended to increase food security, decrease ecological impacts and improve public health. This volume is a cross-disciplinary and applied approach to urban food system sustainability, health, and equity. The contributions are from researchers working on social, economic, political and ethical issues associated with food systems. The book's focus is on the analysis of and lessons obtained from specific experiences relevant to local food systems, such as tapping urban farmers markets to address issues of food access and public health, and use of zoning to restrict the density of fast food restaurants with the aim of reducing obesity rates. Other topics considered include building a local food business to address the twin problems of economic and nutritional distress, developing ways to reduce food waste and improve food access in poor urban neighborhoods, and asking whether the many, and diverse, hopes for urban agriculture are justified. The chapters show that it is critical to conduct research on existing efforts to determine what works and to develop best practices in pursuit of sustainable and socially just urban food systems. The main examples discussed are from the United States, but the issues are applicable internationally.

fast food race: *Food and Public Health* Wendy Wills, Alizon Draper, Ulla Gustafsson, 2015-07-16 This book focuses on food policy, and its relationship to public health, as an increasingly important issue in today's society. Contributors highlight the lack of global regulation in the food supply chain and explore the common tendency to leave regulation to markets and to individual consumer decisions. In a period where there is growing concern about the sustainability of contemporary food systems, this book considers the inadequate response made to issues of food waste where solutions in high income countries are dependent on lifestyle and consumer behaviour. It offers an insight in to the importance of people's everyday lives in relation to policies on public health, food and sustainability. The text demonstrates the corrosive impact of social inequality, and the futility of identifying lower income consumers as flawed when aiming for food policies that seek to achieve improvements in public health. Factors such as technological developments, ecological concerns and international trade are also taken in to account. This book was originally published as a special issue of Critical Public Health.

fast food race: *Geographies of Race and Food* Rachel Slocum, Arun Saldanha, 2016-04-15 While interest in the relations of power and identity in food explodes, a hesitancy remains about calling these racial. What difference does race make in the fields where food is grown, the places it is sold and the manner in which it is eaten? How do we understand farming and provisioning, tasting and picking, eating and being eaten, hunger and gardening better by paying attention to race? This collection argues there is an unacknowledged racial dimension to the production and consumption of food under globalization. Building on case studies from across the world, it advances the conceptualization of race by emphasizing embodiment, circulation and materiality, while adding to food advocacy an antiracist perspective it often lacks. Within the three socio-physical spatialities of food - fields, bodies and markets - the collection reveals how race and food are intricately linked. An international and multidisciplinary team of scholars complements each other to shed light on how human groups become entrenched in myriad hierarchies through food, at scales from the dining room and market stall to the slave trade and empire. Following foodways as they constitute racial formations in often surprising ways, the chapters achieve a novel approach to the process of race as one that cannot be reduced to biology, culture or capitalism.

fast food race: Obesity and Gastroenterology. An Issue of Gastroenterology Clinics of North America Octavia Pickett-Blakely, Linda A. Lee, 2016-11-15 In the last three decades, the prevalence of obesity has doubled with over 600 million obese adults worldwide. The gastrointestinal complications of obesity are well publicized; however, the role of the gastrointestinal tract in the

development and treatment of obesity is often understated. From the pathophysiologic role of gut hormones and the microbiota, to the purposeful, anatomic derangement of the gastrointestinal tract that is utilized as a treatment for obesity, it is imperative that gastroenterologists understand the full scope of obesity in relation to the gastrointestinal system. Studies suggest that in the U.S. obesity is underrecognized and undertreated by health care providers. Given its complex sociology, pathophysiology, and treatment, obesity, like many other diseases, requires a multidisciplinary approach. Therefore, gastroenterologists must be equipped with the relevant knowledge of obesity that will empower them to properly manage their patients.

More than half of those financially bereft have a serious health problem, with poor children three to five times more likely to experience chronic health issues than their more affluent peers. This set is a compilation of writings that address the complex problem of poverty and health across location and population.
