glencoe health 2017: The Future for Health Promotion Colin Palfrey, 2018-05-02 Does health promotion have a lasting and positive effect on people? With mounting pressure to reduce costs to

the NHS and increasing scepticism of the so-called nanny state, health promotion initiatives are increasingly being criticised as costly and ineffective, with many arguing that health inequalities can only be reduced through radical political and economic change. This book examines the methods used to evaluate the value of health promotion projects and determines whether attempts to change people's lifestyles have proved successful. Taking into account the practical and ethical issues involved in deciding the appropriate approach to take in efforts to reduce health inequalities, the book assesses what might be the best path forward for health promotion.

glencoe health 2017: *Sociological Theories of Health and Illness* William C Cockerham, 2020-07-09 Sociological Theories of Health and Illness reviews the evolution of theory in medical sociology beginning with the field's origins in medicine and extending to its present-day standing as a major sociological subdiscipline. Sociological theory has an especially important role in the practice of medical sociology because its theories distinguish the subdiscipline from virtually all other scientific fields engaged in the study of health and illness. The focus is on contemporary theory because it applies to contemporary conditions; however, since theory in sociology is often grounded in historical precedents and classical foundations, this material is likewise included as it relates to medical sociology today. This book focuses on the most commonly used sociological theories in the study of health and illness, illustrating their utility in current examples of empirical research on a wide range of topics. The qualitative or quantitative research methods applicable to specific theories are also covered. Distinctions between macro and micro-level levels of analysis and the relevance of the agency-structure dichotomy inherent in all theories in sociology are discussed. Beginning with classical theory (Durkheim, Weber, and Marx) and the neglected founders (Gilman, Martineau, and DuBois), along with symbolic interaction (Mead, Strauss) and labeling theory (Becker), and poststructuralism and postmodernism (Foucault), coverage is extended to contemporary medical sociology. Discussion of the stress process model (Pearlin) is followed by the social construction of gender and race and intersectionality theory (Collins), health lifestyle theory (Cockerham), life course theory (Elder), fundamental cause theory (Link and Phelan), and theories of the medical profession (Freidson), medicalization and biomedicalization (Conrad, Clarke), and social capital (Bourdieu, Putnam, and Lin).

glencoe health 2017: *Understanding Public Health* Klaus Hurrelmann, Matthias Richter, 2019-12-06 This book develops a new model of the genesis of health, on the basis of the interplay between genetic and environmental factors. Hurrelmann and Richter build upon the basic theories of health and the popular model of salutogenesis to offer a comprehensive interdisciplinary theory of health genesis and success: Productive Processing of Reality (PPR). The authors show that health is the lifelong dynamic process of dealing with the internal reality of physical and psychological impulses and the external reality of social and material impulses. To demonstrate this, the book is split into three interconnected parts. Part A analyses the determinants of health, providing an overview of the insights of current research and the impact of socioeconomic influences and gender on health. Part B covers public health, social, learning and coping theories, all of which understand health as an interaction between people and their environment. Part C draws on these four theories to outline PPR, stressing the interrelation between physical and mental constitution and the demands of the social and mental environment, and suggesting strategies for coping with these demands during the life course. *Understanding Public Health: Productive Processing of Internal and External Reality* will be valuable reading for students and researchers in psychology, sociology, educational science, public health and medical science, and for policymakers in public health.

glencoe health 2017: The Routledge Handbook of the Political Economy of Health and Healthcare David Primrose, Rodney D. Loepky, Robin Chang, 2024-02-28 This handbook provides a comprehensive and critical overview of the gamut of contemporary issues around health and healthcare from a political economy perspective. Its contributions present a unique challenge to prevailing economic accounts of health and healthcare, which narrowly focus on individual behaviour and market processes. Instead, the capacity of the human body to reach its full potential and the ability of society to prevent disease and cure illness are demonstrated to be shaped by a broader array of political economic processes. The material conditions in which societies produce, distribute, exchange, consume, and reproduce – and the operation of power relations therein – influence all elements of human health: from food consumption and workplace safety, to inequality, healthcare and housing, and even the biophysical conditions in which humans live. This volume explores these concerns across five sections. First, it introduces and critically engages with a variety of established and cutting-edge theoretical perspectives in political economy to conceptualise health and healthcare – from neoclassical and behavioural economics, to Marxist and feminist approaches. The next two sections extend these insights to evaluate the neoliberalisation of health and healthcare over the past 40 years, highlighting their individualisation and commodification by the capitalist state and powerful corporations. The fourth section examines the diverse manifestation of

these dynamics across a range of geographical contexts. The volume concludes with a section devoted to outlining more progressive health and healthcare arrangements, which transcend the limitations of both neoliberalism and capitalism. This volume will be an indispensable reference work for students and scholars of political economy, health policy and politics, health economics, health geography, the sociology of health, and other health-related disciplines. Chapters 1 & 8 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons [CC BY NC ND] 4.0 license.

glencoe health 2017: *Handbook of Research on Updating and Innovating Health Professions Education: Post-Pandemic Perspectives* Ford, Channing R., Garza, Kimberly B., 2021-10-08 The outbreak of the Coronavirus in early 2020 resulted in unprecedented changes to health professions education. The pervasive stay-at-home orders resulted in faculty, who were trained for preparing the next generation of health professionals in a traditional learning environment, throwing out their lesson plans and starting anew. New approaches to teaching and learning were created quickly, and without the typical extensive planning, which introduced several challenges. However, lessons learned from these approaches have also resulted in increased technology adoption, innovative assessment strategies, and increased creativity in the learning environment. *The Handbook of Research on Updating and Innovating Health Professions Education: Post-Pandemic Perspectives* explores the various teaching and learning strategies utilized during the pandemic and the innovative approaches implemented to evaluate student learning outcomes and best practices in non-traditional academic situations and environments. The chapters focus specifically on lessons learned and best practices in health professions education and the innovative and exciting changes that occurred particularly with the adoption and implementation of technology. It provides resources and strategies that can be implemented into the current educational environments and into the future. This book is ideal for inservice and preservice teachers, administrators, teacher educators, practitioners, medical trainers, medical professionals, researchers, academicians, and students interested in curriculum, course design, development of policies and procedures within academic programs, and the identification of best practices in health professions education.
