The course is accessible globally, offering both online and in-person formats to accommodate diverse preferences and schedules.

Philosophical Foundations

The course is grounded in the philosophy that true well-being arises from engineering the inner dimensions of human experience. Inner engineering emphasizes self-responsibility and conscious living, rooted in the belief that individuals can actively shape their mental and emotional states. This approach draws heavily from classical yogic texts and spiritual traditions, integrating them with practical techniques that are applicable in daily life.

Course Structure and Duration

The inner engineering course typically spans several sessions, which may be completed over a few

days or weeks depending on the delivery mode. It includes interactive lectures, guided meditations, and physical practices such as yoga postures and breath control exercises. Participants are encouraged to engage in daily practices post-course to sustain and deepen the benefits.

Core Components and Techniques

The inner engineering course encompasses a range of practices designed to optimize mental, emotional, and physical health. These practices collectively aim to harmonize the body's energy system, leading to improved health and emotional resilience.

Self-Awareness and Inner Transformation

Participants are guided through exercises that foster increased self-awareness and introspection. By observing thought patterns, emotional responses, and bodily sensations, individuals gain insights into the root causes of discomfort or distress. inner engineering course: *Inner Engineering* Sadhguru, 2016-09-20 NEW YORK TIMES BESTSELLER • Thought leader, visionary, philanthropist, mystic, and yogi Sadhguru presents Western readers with a time-tested path to achieving absolute well-being: the classical science of yoga. “A loving invitation to live our best lives and a profound reassurance of why and how we can.”—Sir Ken Robinson, author of *The Element*, *Finding Your Element*, and *Out of Our Minds: Learning to Be Creative* NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY SPIRITUALITY & HEALTH The practice of hatha yoga, as we commonly know it, is but one of eight branches of the body of knowledge that is yoga. In fact, yoga is a sophisticated system of self-empowerment that is capable of harnessing and activating inner energies in such a way that your body and mind function at their optimal capacity. It is a means to create inner situations exactly the way you want them, turning you into the architect of your own joy. A yogi lives life in this expansive state, and in this transformative book Sadhguru tells the story of his own awakening, from a boy with an unusual affinity for the natural world to a young daredevil who crossed the Indian continent on his motorcycle. He relates the moment of his enlightenment on a mountaintop in southern India, where time stood still and he emerged radically changed. Today, as the founder of Isha, an organization devoted to humanitarian causes, he lights the path for millions. The term guru, he notes, means “dispeller of darkness, someone who opens the door for you. . . . As a guru, I have no doctrine to teach, no philosophy to impart, no belief to propagate. And that is because the only solution for all the ills that plague humanity is self-transformation. Self-transformation means that nothing of the old remains. It is a dimensional shift in the way you perceive and experience life.” The wisdom distilled in this accessible, profound, and engaging book offers readers time-tested tools that are fresh, alive, and radiantly new. *Inner Engineering* presents a revolutionary way of thinking about our agency and our humanity and the opportunity to achieve nothing less than a life of joy.

inner engineering course: *Place/No-Place in Urban Asian Religiosity* Joanne Punzo Waghorne, 2016-07-15 This book discusses Asia's rapid pace of urbanization, with a particular focus on new spaces created by and for everyday religiosity. The essays in this volume - covering topics from the global metropolises of Singapore, Bangalore, Seoul, Beijing, and Hong Kong to the regional centers of Gwalior, Pune, Jaipur, and sites like Wudang Mountain - examine in detail the spaces created by new or changing religious organizations that range in scope from neighborhood-based to consciously global. The definition of "spatial aspects" includes direct place-making projects such as the construction of new religious buildings - temples, halls and other meeting sites, as well as less tangible religious endeavors such as the production of new "mental spaces" urged by spiritual leaders, or the shift from terra firma to the strangely concrete effervesce of cyberspace. With this in mind, it explores how distinct and blurred, and open and bounded communities generate and participate in diverse practices as they deliberately engage or disengage with physical landscapes/cityscapes. It highlights how through these religious organizations, changing class and gender configurations, ongoing political and economic transformations, continue as significant factors shaping and affecting Asian urban lives. In addition, the book goes further by exploring new and often bittersweet "improvements" like metro rail lines, new national highways, widespread internet access, that bulldoze - both literally and figuratively - religious places and force relocations and adjustments that are often innovative and unexpected. Furthermore, this volume explores personal experiences within the particularities of selected religious organizations and the ways that subjects interpret or actively construct urban spaces. The essays show, through ethnographically and historically grounded case studies, the variety of ways newly emerging religious communities or religious institutions understand, value, interact with, or strive to ignore extreme urbanization and rapidly changing built environments.

inner engineering course: *Life and Death in One Breath* Sadhguru, 2013-11-01 For ages, most of humanity has placed "life" and "death" at two ends of the existential spectrum - favoring one, fearing the other and continuously floundering between the two. Only when someone who has consciously traversed between both life and death offers to articulate some aspects of it, does

humanity get a glimpse of what lies beyond the horizon of its normal perception. With his extraordinary insights, coming from a profound inner experience, Sadhguru reveals that life and death are, in fact, two sides of the same coin. It is only by embracing both that we can break the shackles of our selfmade struggles and be set free. In his own words, he says: "Death is a cosmic joke. If you get the joke, when you fall on the other side, it will be wonderful. If you don't get the joke, when you are here you fear the other side, and when the other side comes, you just don't know what it is about. If death becomes a laughing matter in your life, life becomes an utterly effortless process - there is no need to restrain yourself in the process of life; you can live your life absolutely, totally." "The distance between your life and death is just one breath, isn't it?" - Sadhguru

inner engineering course: *Singapore, Spirituality, and the Space of the State* Joanne Punzo Waghorne, 2020-03-19 This book examines spirituality in Singapore, showing how important the city state is for understanding contemporary global configurations of urban space, religion, and spirituality. Joanne Punzo Waghorne highlights how the formal religious spaces-temples, churches, and mosques-have been confined to allotted sites on the map of Singapore, whereas various "spiritual" organizations, particularly of Hindu origins and headed by a guru, still continue to operate as "societies" classified by the government with other "clubs." These unconventional religiosities are not confined but ironically make their own places, meeting in ostensive secular venues: high-rise flats, malls, businesses, and community centers, thus existing in the overall space of religion, commerce, and the state. The book argues that State of Singapore also operates between the secular and the religious, constructing an overarching spatial regime that both accommodates and yet rivals the alternate spheres that spiritual movements construct under its umbrella. Both spatial configurations challenge the presumed relationships between myth and reality, religion and commerce, the ethereal and the concrete, the sacred and the secular, on the levels of self, community, and polity. Singapore, now deemed a model for urban development in Asia, also offers an understanding of a new post-secularity and perhaps reveals where the urbanized world is headed.
