magruder s american government review: Religiosity, Cultural Capital, and Parochial Schooling Chang-Ho C. Ji, 2010-03-01 This book examines whether or not and how personal religion associates with school cultural capital. Specifically, on one level, the book offers insights and empirical data on who is choosing, teaching, and working in parochial schools and what motivates them to do so in the schools, issues that still remain largely unexplored in the educational research literature. In particular, it centers on the significance of personal religion and commitment as a reason for choosing and serving in parochial schools. On another level, the book is an attempt to enhance our understanding of the leadership orientation, school satisfaction, teacher assertiveness and empowerment, educational aspiration, and parental involvement in parochial schools, attributes reportedly essential for successful schools. Most importantly, at the heart of the book is an endeavor to estimate the influence of personal religion on the development of these cultural capital attributes and to address its implications for parochial schools as well as the current discussion on public schooling versus parochial schooling in the United States. To achieve these goals, the author will rely on first-hand empirical data collected for this book or other related research projects and adopt

various scientific methods for data analysis and interpretation. The book shows that personal religion matters, but its impact is weaker than thought and is largely restricted to the students and parents in parochial schools, rather than their educators. To the extent that parochial schools excel more than public schools, personal religion seems to be responsible for the development of student and parent-level cultural capital such as parenting style and student desire for academic success and favorable attitude toward school, yet it does not necessarily engender the growth of teacher and administrator cultural capital. This result, to some extent, comes as a surprise but corrects and enhances our understanding about whether or not and how religion affects academic achievement. This book is an inquiry into the issue of school success and cultural capital, representing a scholarly contribution to the fields of education, religion, psychology, and sociology. Both scholars and lay people of education and religion will find this book a useful, informative, and insightful reference and classroom textbook.

magruder s american government review: *The Code of Hammurabi* Jack Sholl, Jeane Breazeale, 2013-09-17 This case study shows that a widely used U. S. Government high school textbook puts an ancient King of Babylon on the same level as American founding fathers George Washington, Thomas Jefferson and John Adams. The research study finds that the assertion that the Hammurabi Code is an underlying document of the United States as millions of American high school students are being taught today is not correct. The U.S. Declaration of Independence, the U.S. Constitution and the Bill of Rights are the founding documents of the United States. The study challenges the claim by both legalists and religionists to the presumed importance of this ancient code to the foundations of American government now and in the past. It warns that historical revisionism of this type poses a threat to U.S. national security at a time when American values are being challenged abroad, especially in the Middle East. It finds no overall uniform oversight or coordination of parties at all levels involved in high school textbook content. The present system for fully reviewing textbooks and curricula a combination of publishers, school boards, issue-blind teachers and academics, government and national security agencies is not working. Unless corrected, the foundations of freedom and democracy and the Judeo-Christian spiritual values upon which they are built will continue to be seriously eroded in the nations high schools.
