miller levine biology online: Shadow of Oz Wayne D. Rossiter, 2015-10-21 In the century and a half since Darwin's *Origin of Species*, there has been an ongoing--and often vociferously argued--conversation about our species' place in creation and its relationship to a Creator. A growing number of academic professionals see no conflict between Darwin's view of life and the Christian faith. Dubbed theistic evolution, this brand of Christianity holds that God has used processes like Darwinian evolution to achieve his creation. But is that true? Can Darwin's mechanism of natural selection acting on chance mutations be reconciled with God's intentionality in producing particular outcomes? Does humanity represent the apex of his creation, or just an erasable and ephemeral signpost along a path still being revealed? Does theistic evolution permit God to intervene supernaturally in the workings of his creation? Can we as humans be made in the image of God if we are just one of the millions of products of evolution? Can we salvage concepts like freewill, meaning, purpose, or an eternal soul within theistic evolution? In this book, Wayne Rossiter assess theistic evolution, and whether or not it is consistent with Christianity and secular science. His conclusion is that it bears little resemblance to classical Christianity, and promotes a century-old understanding of evolutionary theory. Theistic evolution renders God a passive player in creation, so far removed and undetectable that he resembles a mere shadow of the Creator described in Christianity.

miller levine biology online: Design, Selection, and Implementation of Instructional Materials for the Next Generation Science Standards National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Science Education, 2018-04-02 Instructional materials are a key means to achieving the goals of science education--an enterprise that yields unique and worthwhile benefits to individuals and society. As states and districts move forward with adoption and implementation of the Next Generation Science Standards (NGSS) or work on improving their instruction to align with A Framework for K-12 Science Education (the Framework), instructional materials that align with this new vision for science education have emerged as one of the key mechanisms for creating high-quality learning experiences for students. In response to the need for more coordination across

the ongoing efforts to support the design and implementation of instructional materials for science education, the National Academies of Sciences, Engineering, and Medicine convened a public workshop in June 2017. The workshop focused on the development of instructional materials that reflect the principles of the Framework and the NGSS. This publication summarizes the presentations and discussions from the workshop.

miller levine biology online: *The Well-Trained Mind* Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. *The Well-Trained Mind* will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in *The Well-Trained Mind* to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. *The Well-Trained Mind* will give you the tools you'll need to teach your child with confidence and success.

miller levine biology online: *Politically Incorrect Guide to Darwinism and Intelligent Design* Jonathan Wells, 2006-08-21 Darwin is an emperor who has no clothes— but it takes a brave man to say so. Jonathan Wells, a microbiologist with two Ph.D.s (from Berkeley and Yale), is that brave man. Most textbooks on evolution are written by Darwinists with an ideological ax to grind. Brave dissidents—qualified scientists—who try to teach or write about intelligent design are silenced and sent to the academic gulag. But fear not: Jonathan Wells is a liberator. He unmask the truth about Darwinism— why it is wrong and what the real evidence is. He also supplies a revealing list of Books You're Not Supposed to Read (as far as the Darwinists are concerned) and puts at your fingertips all the evidence you need to challenge the most closed-minded Darwinist.

miller levine biology online: *Uncovering Student Ideas in Life Science* Page Keeley, 2011 Author Page Keeley continues to provide K-12 teachers with her highly usable and popular formula for uncovering and addressing the preconceptions that students bring to the classroom--the formative assessment probe--in this first book devoted exclusively to life science in her *Uncovering Student Ideas in Science* series. In this volume, Keeley addresses the topics of life and its diversity; structure and function; life processes and needs of living things; ecosystems and change; reproduction, life cycles, and heredity; and human biology. Using the probes as diagnostic tools that identify and analyze students' preconceptions, teachers can easily move students from where they are in their current thinking to where they need to be to achieve scientific understanding. At the same time, use of the probes deepens the teacher's understanding of the subject matter, suggests instructional implications, and expands assessment literacy. Using the student-learning data gained through the probes to inform teaching and learning is what makes the probes formative. Each probe is supported by extensive Teacher Notes, which provide background information on the purpose of the probes, related concepts, explanations of the life science ideas being taught, related ideas in the national science standards, research on typical student misconceptions in life science, and suggestions for instruction and assessment.
