Salvation through Jesus Christ is central, promising believers eternal life in God's presence. Buddhist Afterlife Concepts

Buddhism shares the idea of rebirth but focuses on escaping the cycle of suffering through enlightenment (nirvana). The afterlife is not viewed as a permanent heaven or hell but as a continuation of consciousness shaped by karma until liberation is achieved. These early ideas continue to influence modern secular and spiritual perspectives on men's afterlife beliefs.

Indigenous and Ancestral Beliefs

These traditions often emphasize a spiritual connection between the living and the dead, with rituals honoring ancestors and maintaining harmony between worlds. Such beliefs shape men's spiritual identities in these cultural contexts.

men s spiritual beliefs afterlife: *Afterlife and Resurrection Beliefs in the Apocrypha and Apocalyptic Literature* Jan Age Sigvartsen, 2019-09-19 Jan A. Sigvartsen seeks to examine the immense interest in life after death, and speculation about the fates awaiting both the righteous and the wicked, that proliferated in the Second Temple period. In this volume Sigvartsen explores the Apocrypha and the apocalyptic writings in the Pseudepigrapha. He identifies the numerous afterlife and resurrection beliefs and presents an analysis that enables readers to easily understand and compare the wide-ranging beliefs regarding the afterlife that these texts hold. A careful reading of these resurrection passages, including passages appearing in Sirach, Maccabees, the Sibylline Oracles and the Ezra texts, reveals that most of the distinct views on life-after-death, regardless of their complexity, show little evidence of systematic development relational to one another, and are often supported by several key passages or shared motifs from texts that later became a part of the TaNaKh. Sigvartsen also highlights the factors that may have influenced the development of so many different resurrection beliefs; including anthropology, the nature of the soul, the scope of the resurrection, the number and function of judgments, and the final destination of the righteous and the wicked. Sigvartsen's study provides a deeper understanding of how the "TaNaKh" was read by different communities during this important period, and the role it played in the development of the resurrection belief - a central article of faith in both Christianity and Rabbinic Judaism.

men s spiritual beliefs afterlife: *Trauma, Religion and Spirituality in Germany during the First World War* Jason Crouthamel, 2021-10-21 This book explores the impact of violence on the religious beliefs of front soldiers and civilians in Germany during the First World War. The central argument is that religion was the main prism through which men and women in the Great War articulated and processed trauma. Inspired by trauma studies, the history of emotions, and the social and cultural history of religion, this book moves away from the history of clerical authorities and institutions at war and instead focuses on the history of religion and war 'from below.' Jason Crouthamel provides a fascinating exploration into the language and belief systems used by ordinary people to explain the inexplicable. From Judeo-Christian traditions to popular beliefs and 'superstitions,' German soldiers and civilians depended on a malleable psychological toolbox that included a hybrid of ideas stitched together using prewar concepts mixed with images or experiences derived from the surreal environment of modern combat. Perhaps most interestingly, studying the front experience exposes not only lived religion, but also how religious beliefs are invented. Front soldiers in particular constructed new, subjective spiritual and religious concepts based on encounters with industrialized weapons, the sacred experience of comradeship, and immersion in mass death, which profoundly altered their sense of self and the supernatural. More than just a coping mechanism, religious language and beliefs enabled victims, and perpetrators, of violence to narrate concepts of psychological renewal and rebirth. In the wake of defeat and

revolution, religious concepts shaped by the war experience also became a cornerstone of visions for radical political movements, including the National Socialists, to transform a shattered and embittered German nation. Making use of letters between soldiers and civilians, diaries, memoirs and front newspapers, *Trauma, Religion and Spirituality in Germany during the First World War* offers a unique glimpse into the belief systems of men and women at a turning point in European history.

men s spiritual beliefs afterlife: The Religious and Spiritual Life of the Jews of Medina Haggai Mazuz, 2014-07-03 *In The Religious and Spiritual Life of the Jews of Medina* Haggai Mazuz offers an account of the halakhic character of the Jewish community of Medina in the seventh century CE. Making use of a unique methodology of comparison between Islamic and Jewish sources, Mazuz convincingly argues that the Jews of Medina were Talmudic-Rabbinic Jews in almost every respect. Their sages believed in using homiletic interpretation of the Scriptures, as did the sages of the Talmud. On many halakhic issues, their observations were identical to those of the Talmudic sages. In addition, they held Rabbinic beliefs, sayings and motifs derived from the Midrashic literature. *The Religious and Spiritual Life of the Jews of Medina* is a wonderful reference work for Talmudic study, Jewish history, and Islamic history. A must-have book for every library. -

Haim Gottschalk, Association of Jewish Libraries, vol.5, no.3 (2015) Mazuz confronts an admirably wide range of Arabic sources, from the Qur'an to prophetic biographies and ḥadīth compilations as well as legal and theological works. The breadth of the evidence provided to support the conclusion about the religious identity of Medina's Jews is impressive. - Harry Munt, University of York, The Review of Rabbinic Judaism, vol.19 (2016)

men s spiritual beliefs afterlife: Suicide: A Global Perspective Maurizio Pompili, 2012-09-19 In the year 2000, approximately one million people died from suicide: a global mortality rate of 16 per 100,000, or one death every 40 seconds. In the last 45 years suicide rates have increased by 60% worldwide. Suicide is now among the three leading causes of death among those aged 15-44 years (both sexes); these figures do not include suicide attempts up to 20 times more frequent than completed suicide. Suicide worldwide is estimated to represent 1.8% of the total global burden of disease in 1998, and 2.4% in countries with market and former socialist economies in 2020. Although traditionally suicide rates have been highest among the male elderly, rates among young people have been increasing to such an extent that they are now the group at highest risk in a third of countries, in both developed and developing countries. Mental disorders (particularly depression and substance abuse) are associated with more than 90% of all cases of suicide; however, suicide results from many complex sociocultural factors and is more likely to occur particularly during periods of socioeconomic, family and individual crisis situations (e.g., loss of a loved one, employment, honour). The economic costs associated with completed and attempted suicide are estimated to be in the billions of dollars. One million lives lost each year are more than those lost from wars and murder annually in the world. It is three times the catastrophic loss of life in the tsunami disaster in Asia in 2005. Every day of the year, the number of suicides is equivalent to the number of lives lost in the attack on the World Trade Center Twin Towers on 9/11 in 2001. Everyone should be aware of the warning signs for suicide: Someone threatening to hurt or kill him/herself, or taking of wanting to hurt or kill him/herself; someone looking for ways to kill him/herself by seeking access to firearms, available pills, or other means; someone talking or writing about death, dying or suicide, when these actions are out of the ordinary for the person. Also, high risk of suicide is generally associated with hopelessness; rage, uncontrolled anger, seeking revenge; acting reckless or engaging in risky activities, seemingly without thinking; feeling trapped - like there's no way out; increased alcohol or drug use; withdrawing from friends, family and society, anxiety, agitation, unable to sleep or sleeping all the time; dramatic mood changes; no reason for living; no sense of purpose in life. Table 1: Understanding and helping the suicidal individual should be a task for all. Suicide Myths How to Help the Suicidal Person Warning Sights of Suicide Myth: Suicidal people just want to die. Fact: Most of the time, suicidal people are torn between wanting to die and wanting to

live. Most suicidal individuals don't want death; they just want to stoop the great psychological or emotional pain they are experiencing -Listen; -Accept the person's feelings as they are; -Do not be afraid to talk about suicide directly -Ask them if they developed a plan of suicide; -Expressing suicidal feelings or bringing up the topic of suicide; -Giving away prized possessions settling affairs, making out a will; -Signs of depression: loss of pleasure, sad mood, alterations in sleeping/eating patterns, feelings of hopelessness; Myth: People who commit suicide do not warn others. Fact: Eight out of every 10 people who kill themselves give definite clues to their intentions. They leave numerous clues and warnings to others, although clues may be non-verbal or difficult to detect. -Remove lethal means for suicide from person's home -Remind the person that depressed feelings do change with time; -Point out when death is chosen, it is irreversible; -Change of behavior (poor work or school performance) -Risk-taking behaviors -Increased use of alcohol or drugs -Social isolation -Developing a specific plan for suicide Myth: People who talk about suicide are only trying to get attention. They won't really do it. Fact: Few commit suicide without first letting someone know how they feel. Those who are considering suicide give clues and warnings as a cry for help. Over 70% who do threaten to commit suicide either make an attempt or complete the act. -Express your concern for the person; -Develop a plan for help with the person; -Seek outside emergency intervention at a hospital, mental health clinic or call a suicide prevention center Myth: Don't mention suicide to someone who's showing signs of depression. It will plant the idea in their minds and they will act on it. Fact: Many depressed people have already considered suicide as an option. Discussing it openly helps the suicidal person sort through the problems and generally provides a sense of relief and understanding. Suicide is preventable. Most suicidal individuals desperately want to live; they are just unable to see alternatives to their problems. Most suicidal individuals give definite warnings of their suicidal intentions, but others are either unaware of the significance of these warnings or do not know how to respond to them. Talking about suicide does not cause someone to be suicidal; on the contrary the individual feel relief and has the opportunity to experience an empathic contact. Suicide profoundly affects individuals, families, workplaces, neighbourhoods and societies. The economic costs associated with suicide and self-inflicted injuries are estimated to be in the billions of dollars. Surviving family members not only suffer the trauma of losing a loved one to suicide, and may themselves be at higher risk for suicide and emotional problems. Mental pain is the basic ingredient of suicide. Edwin Shneidman calls such pain "psychache" [1], meaning an ache in the psyche. Shneidman suggested that the key questions to ask a suicidal person are 'Where do you hurt?' and 'How may I help you?'. If the function of suicide is to put a stop to an unbearable flow of painful consciousness, then it follows that the clinician's main task is to mollify that pain. Shneidman (1) also pointed out that the main sources of psychological pain, such as shame, guilt, rage, loneliness, hopelessness and so forth, stem from frustrated or thwarted psychological needs. These psychological needs include the need for achievement, for affiliation, for autonomy, for counteraction, for exhibition, for nurturance, for order and for understanding. Shneidman [2], who is considered the father of suicidology, has proposed the following definition of suicide: 'Currently in the Western world, suicide is a conscious act of self-induced annihilation, best understood as a multidimensional malaise in a needful individual who defines an issue for which the suicide is perceived as the best solution'. Shneidman has also suggested that 'that suicide is best understood not so much as a movement toward death as it is a movement away from something and that something is always the same: intolerable emotion, unendurable pain, or unacceptable anguish. Strategies involving restriction of access to common methods of suicide have proved to be effective in reducing suicide rates; however, there is a need to adopt multi-sectoral approaches involving other levels of intervention and activities, such as crisis centers. There is compelling evidence indicating that adequate prevention and treatment of depression, alcohol and substance abuse can reduce suicide rates. School-based interventions involving crisis management, self-esteem enhancement and the development of coping skills and healthy decision making have been demonstrated to reduce the risk of suicide among the youth. Worldwide, the prevention of suicide has not been adequately addressed due to basically a lack of

awareness of suicide as a major problem and the taboo in many societies to discuss openly about it. In fact, only a few countries have included prevention of suicide among their priorities. Reliability of suicide certification and reporting is an issue in great need of improvement. It is clear that suicide prevention requires intervention also from outside the health sector and calls for an innovative, comprehensive multi-sectoral approach, including both health and non-health sectors, e.g., education, labour, police, justice, religion, law, politics, the media.

Throughout his priesthood St. Joseph became famous for frequent levitations that were observed on hundreds of occasions and by thousands of witnesses, including many skeptics. men s spiritual beliefs afterlife: *A Guide to Psychosocial and Spiritual Care at the End of Life* Henry S. Perkins, 2017-03-17 Psychological, social, and spiritual care is as important as physical

care at the end of life. Yet caregivers often feel ill-equipped to give that nonphysical care. This book shows how to do it. The book addresses all caregivers who attend dying patients: doctors, nurses, chaplains, clergy in the pastorate, social workers, clinical psychologists, family caregivers, and others. It covers such topics as the functional and emotional trajectories of dying; the varied approaches of patients and caregivers to end-of-life decisions; culturally based beliefs about dying; the differences between depression and grief; and people's views about the right time to die, the death experience itself, and the afterlife. For each topic the book introduces core concepts and summarizes recent research about them. The book presents much of its material in readable tables for easy reference; applies the material to real-life cases; lists the main "take home" points for each chapter; and gives references for additional reading. The book helps caregivers anticipate the reactions of patients and survivors to end-of-life traumas and suggests how caregivers can respond insightfully and compassionately. At the same time the book challenges caregivers to think through their own views about death and dying. This book, therefore, is a must-read for all caregivers—professional and nonprofessional alike—who strive to give their patients comprehensive, high-quality end-of-life care.

men s spiritual beliefs afterlife: Solitary Pagans Helen A. Berger, 2019-08-12 An exploration of the increasingly popular phenomenon of solitary practice within contemporary paganism *Solitary Pagans* is the first book to explore the growing phenomenon of contemporary Pagans who practice alone. Although the majority of Pagans in the United States have abandoned the tradition of practicing in groups, little is known about these individuals or their way of practice. Helen A. Berger fills that gap by building on a massive survey of contemporary practitioners. By examining the data, Berger describes solitary practitioners demographically and explores their spiritual practices, level of social engagement, and political activities. Contrasting the solitary Pagans with those who practice in groups and more generally with other non-Pagan Americans, she also compares

contemporary U.S. Pagans with those in the United Kingdom, Australia, and Canada. Berger brings to light the new face of contemporary paganism by analyzing those who learn about the religion from books or the Internet and conduct rituals alone in their gardens, the woods, or their homes. Some observers believe this social isolation and political withdrawal has resulted in an increase in narcissism and a decline in morality, while others argue to the contrary that it has produced a new form of social integration and political activity. Berger posits the implications of her findings to reveal a better understanding of other metaphysical religions and those who shun traditional religious organizations.

men s spiritual beliefs afterlife: IN OUR IMAGE: The History and Mystery In Our Look at Life Debra Marie Albaugh, 2014-05-11 Also available in economical Study Guide version with full text, and Digital Edition in full color. This is the Teacher's edition, full color, 8 1/2 square, 343 pages. Worldviews are a significant part of the way we view the world. They impact our perception of reality. They impact our perception of the environment. And they impact our perception of ourselves. They relate, as I had seen, as I adventured through worldview study and interaction, writing college papers and identifying events in history that led to the current views in the world. The writing does not only contain evidence relating to the spirit, it also contains the unveiling of mysteries I discovered during study, personal accounts, and includes steps that followed in understanding how these mysteries seem to form the world. The study, relaying the way the views impact theology, philosophy, the world, and the unborn, continues unveiling, but I must put this much down on paper for now--a compilation from my A papers in Biblical study.

men s spiritual beliefs afterlife: Suicide and Culture 2.0 Erminia Colucci, David Lester, 2025-03-24 **###BOLD#TEXT[Integrating the role of culture is critical in preventing suicide]###** Written by leading suicide researchers Explores suicide in different cultural contexts Highlights how to conduct culturally sensitive studies Building on the seminal work of Colucci and Lester (2013), this volume examines the unique perspective of the role culture plays in suicide research and prevention. With the current domination of individual and largely biomedical approaches in the field, these leading social scientists and suicide researchers carefully show how important integrating sociocultural factors is in helping to prevent people from dying by suicide and support those who live with suicidality. The first section addresses the fundamental issues of why culture is of vital importance in understanding and preventing suicidal behavior, what the cultural meaning of suicide is, and where current research and theory are taking us. It concludes with a thought-provoking perspective on suicide as a staged performance. The second section features a mixed-methods cross-cultural study on the meanings of suicide in Australian, Indian, and Italian cultures. Additional chapters explore a culturally specific form of suicide (i.e., sati in India), suicide among Roma and Irish Travellers, and a community-based suicide prevention strategy for different populations, including migrants and refugees and people from low-and-middle-income Asian countries. The authors conclude with insightful recommendations for conducting culturally sensitive and meaningful studies. This volume is essential reading for anyone involved in suicide research and prevention and more broadly to those interested in the sociocultural and political contexts of mental health.

men s spiritual beliefs afterlife: Gender and Religion in the City Clara Greed, 2019-11-07

This book provides a conceptual, historical and contemporary context to the relationships between gender, religion and cities. It draws together these three components to provide an innovative view of how religion and gender interact and affect urban form and city planning. While there have been many books that deal with religion and cities; gender and cities; and gender and religion, this book is unique in bringing these three subjects together. This trio of inter-relationships is first explored within Western Christianity: in Roman Catholicism, Protestantism, Eastern Orthodoxy and in the Pentecostal and Charismatic movements. A wider perspective is then provided in chapters on the ways in which Islam shapes urban development and influences the position of Muslim women in urban space. While official religions have declined in the West there is still a desire for new forms of spirituality, and this is discussed in chapters on municipal spirituality and on the rise of paganism and the links to both environmentalism and feminism. Finally, ways of taking into account both gender and religion within the statutory urban planning system are presented. This book will be of great interest to those researching environment and gender, urban planning and sustainability, human geography and religion.
