preparation for electrical engineering interview: *Feminising the Masculine?* Margaret Whittock, 2018-02-05 This title was first published in 2000: This work aims to provide a comparative and temporal assessment of the position of women in non-traditional employment in Europe, Britain and Northern Ireland. Its second aim is to provide a new perspective on the division of labour in modern Western societies and to critically examine the issues, debates and perspectives which have traditionally dominated portrayals of women and paid employment. The book assesses the potential which women themselves have for transforming existing gender relations, particularly within the structural constraints of the education, training and employment systems. In so doing, it is intended to highlight flaws inherent in much contemporary feminist theorizing, and aims to provide a more satisfactory theoretical framework within which to elaborate and develop its arguments. While related texts have tended to concentrate on stereotypical notions of women and paid employment, this book aims to fill a gap in the literature by scrutinizing the lived experiences of women in non-traditional manual occupations, and relating these to a possible transformation of the existing gender order in Western societies

preparation for electrical engineering interview: *Enriching Human Capital Through Training and Development* P L Rao, 2009 The development of Human Resource has assumed importance particularly after the government's focus on HRD, introduction of liberalized economy and globalisation of world trade. This has led to world trade competition. For this purpose, every corporate entity sought ISO certification, which enjoins on the industry to impart regular training to its workforce. Thus training has taken centerstage. HR is now considered as human capital and much importance is given to the development and training of this unique resource. The one area in HR that found global visibility is training. Training has a direct relationship to HR's concern about human capital development and globalisation of workforce. People want to study at their own pace and time. The exciting development area is therefore e-learning. Keeping the above developments in view, it is imperative that business organisations should develop their own internal resources for training and development of their workforce. While giving stress on management development, most organizations ignore development and training of operatives who constitute the bulwark of their human capital. This aspect has been suitably taken care of in this book. This comprehensive book covers all aspects of training and development starting from conceptual inputs to management of training environment, instructor's competencies, transfer of learning, IT based training, to mention a few should be presented to line managers. The book is divided into four parts - Training and Development, Training Delivery, Evaluation of Training, and the last part containing eleven Appendices relating to the Text. Attempt has been made to present the subject in a succinct and lucid manner, bringing the latest on the subject. The text focuses not only on the traditional training methods, but also on the importance of development dimensions. This comprehensive compendium on training and development, sprinkled with copious examples, will be useful for the budding trainers, HR practitioners and academicians alike.
